

DAILY NEED TO KNOW

Friday, 31 July 2026 · Pre-market brief for Anne Wong

Covering the **Thursday 30 July 2026 US session** + overnight. All times GMT+8 (HKT).

Edition: **FULL** — Hedgeye logged-in edition (live risk ranges & Quads).

1

Market snapshot (Thu 30 Jul close)

Asset	Last	Change	Note
S&P 500	7,437.63	▲ +121.48 / +1.66%	Recovered the 7,356 floor it broke Wednesday; closed 25pts under the 7,462 ceiling
Nasdaq Composite	25,122.18	▲ +679.24 / +2.78%	SNAPPED the six-day losing streak — best day since April 2025
Dow Jones	52,208.06	▲ +613.92 / +1.19%	Recovered a bit over half of Wednesday's -1,153. The laggard, for once
Russell 2000	2,946.10	▲ +39.79 / +1.37%	Back above the 2,887 floor; small caps participated
US 2Y yield	4.25%	▲ +2 bp	CNBC 17:05 EDT. Front end drifted back up but is still below Tuesday
US 10Y yield	4.663%	▲ +4.1 bp	Inside 4.58–4.75%. Hit 4.704% during Asian hours before fading
US 30Y yield	5.21%	▲ +7 bp	STILL AT THE 19-YEAR HIGH — touched 5.234% in Asia. It did not go away
Gold (Aug)	~\$4,160.60	▲ +1.55%	NOW \$4,168.20 o/n — THROUGH the \$4,136 ceiling for a second day
Silver (Sep)	~\$59.02	▲ +1.60%	NOW \$59.32 o/n, pressing the \$60 top. Still a bearish TREND
WTI crude (Sep)	~\$83.59	▼ -1.0%	NOW \$84.06 o/n. Gave back a little of Wednesday's +6.6%; range held
Brent crude	~\$89.03	▼ -1.9%	NOW \$89.45 o/n. Slipped back under \$90 despite fresh US strikes
Bitcoin	~\$64,840	▲ +1.48% o/n	ETH \$1,926 (+0.9%). Finally moved — with equities, not ahead of them
US Dollar (DXY)	99.97	▼ -0.91%	BROKE the 100.52 floor — suspected BoJ/MoF intervention took it out
USD/JPY	159.70	▼ -2.4% (yen up)	BIGGEST YEN GAIN SINCE DEC 2022. Hit 157.8 intraday. BoJ today
VIX	17.09	▼ -3.57 / -17.28%	Round-tripped Wednesday's break in one session. Back inside 16.65–21.50
Copper (Sep)	~\$6.475	▲ +2.6%	NOW \$6.502 o/n, pressing the raised \$6.55 ceiling. Bullish TREND

Colour key: ▲ up ▼ down ◆ neutral/mixed ► little changed. A rise in yields or VIX is not necessarily good. o/n = overnight electronic trade, ~07:00 GMT+8 Fri. Commodity "settles" are derived from live overnight quotes less the stated change (same method as prior editions). Yield levels are Yahoo CBOE 15:00 EDT prints except the 2Y, which is CNBC 17:05 EDT (see Data-confidence).

TL;DR: The tech wreck reversed, violently, and the reason was supply — not the Fed. Samsung warned the memory crunch could run into 2028 and the entire complex re-rated: Micron +18.4%, SanDisk +22%, Western Digital +18%, SK Hynix ADR +17.5%, Lam +17%, AMD +13.0%, Intel +11.4%. Microsoft added +15.5% (\$450bn) — the largest single-day market-value gain by any company, ever — after Azure crossed \$100bn of annual revenue. Nasdaq +2.78% snapped a six-day losing streak; S&P +1.66%; Dow +1.19%; VIX collapsed -17.3% to 17.09. Underneath it: Leopold Aschenbrenner's \$24bn Situational Awareness — \$45bn at the start of July — was **forced to liquidate its entire public book**, and JPMorgan said hedge-fund deleveraging in chips is now essentially finished. That is a clearing event, not a thesis change. The bond

market did not join the party: 30Y still 5.21%, a 19-year high, and 10Y +4bp. Data was soft — Q2 GDP +1.5% vs +1.8% expected, core PCE +3.3% y/y in line. Then the yen went vertical: USD/JPY fell 2.4% to 159.70, briefly 157.8, on suspected MoF/BoJ intervention — the biggest yen gain since December 2022 — taking DXY through Hedgeye's floor to 99.97, hours before the BoJ decides today. After the close, Amazon ripped +9% (AWS +37%, fastest in 15 quarters) and Apple fell ~6% (services miss, guidance cut on memory costs). Same shortage, opposite sides of it.

Today's actionable levels — what to watch

- ▼ **US Dollar (DXY): 99.97 vs 100.52–101.60 (bullish) — the one that broke.** The dollar closed 0.55 BELOW Hedgeye's floor, and it did not do so on a US catalyst — it did so because someone bought roughly 5 yen of USD/JPY in a matter of minutes. A currency index breaking its floor on foreign intervention, with the US 30Y pinned at a 19-year high, is a different signal from a dollar falling on soft US growth. Both are in the tape today.
- ▲ **Gold: \$4,168.20 o/n vs \$3,980–\$4,136 (bearish) — through the ceiling, again.** Second consecutive session above the top of the band. Hedgeye keeps raising the range and gold keeps clearing it. A bearish TREND signal that spot has now overshot two days running is the process telling you it is about to change, not that the price is wrong.
- ◆ **S&P 500: 7,437.63 vs 7,276–7,462 (bullish) — recovered, but into the ceiling.** The index closed 24.4 points, 0.33%, below the top of the range after breaking the FLOOR on Wednesday. That is a 161-point round trip inside one band in two sessions. Futures +0.17% put the open right at the ceiling; there is very little room before the process says the risk is asymmetric the other way.
- ▲ **VIX: 17.09 vs 16.65–21.50, signal UPGRADED Neutral → BULLISH.** Read the mechanics: Hedgeye widened the band and upgraded the signal on Thursday morning, and vol then collapsed ~17.3% to sit 0.44 off the FLOOR. The signal now says vol is bullish while the price sits at the bottom of its range — the setup that historically precedes the next expansion, not the one that follows it.
- ◆ **Nasdaq: 25,122.18 vs 24,258–25,570 (bearish) — recovered the floor by 864 points.** A +2.78% day inside a bearish TREND range. The drawdown from the record narrowed from ~10.1% to roughly ~7.6%. One session does not repair a six-day break, but the forced seller is now out of the way, which is a genuinely different market structure from 24 hours ago.
- ▼ **HY credit (HYG): 78.90–79.70, DOWNGRADED Neutral → BEARISH.** Third signal change in four sessions (Neutral Mon → Bearish Tue → Neutral Wed → Bearish Thu). Credit is the only thing on this page that refused to participate in Thursday's risk-on. When equity vol collapses 17% and HY gets downgraded on the same morning, believe the credit.
- ▲ **Copper: \$6.502 o/n vs \$6.14–\$6.55 (bullish), ceiling RAISED.** Up 2.6% on the session and sitting 0.048 under a raised ceiling. Copper and gold both bid, oil slightly lower, dollar broken — that is the Quad 3 mix expressing itself in the metals rather than in energy for the first time this week.

2 The big picture — what it means

1. **A forced seller finished selling. That is what happened.** Leopold Aschenbrenner's Situational Awareness — \$45bn at the start of July, ~\$24bn by Thursday — was compelled to unwind its ENTIRE public equity book, working through Bank of America, Goldman Sachs and JPMorgan, who were marketing baskets of its longs and shorts to buyers ahead of Thursday's open. The fund ran the consensus AI trade in leveraged form: long AI hardware, short enterprise software. Both legs went against it simultaneously. Separately, JPMorgan's Panigirtzoglou told clients the deleveraging in tech, semis and memory "has advanced faster than we had previously anticipated" and that there is now "more limited room for any further deleveraging." Jim Cramer called it "a clearing event." Whatever you think of the source, the mechanic is real and it is the single best explanation for why a ~30% factor move stopped on a Thursday.
2. **But the actual catalyst was a supply warning, and it cuts both ways.** Samsung warned that the memory crunch could persist into 2028. For the memory producers that is pricing power for three years: Micron +18.4%, SanDisk +22%, Western Digital +18%, Seagate +16%, SK Hynix ADR +17.5%, and UBS initiated SK Hynix at Buy with a \$204 target (61% upside), modelling DRAM demand growth of 36% in 2027 against 22% in 2026. For the memory CONSUMERS it is a cost line, and by Thursday night both of them had said so out loud. Apple guided the September quarter light on "supply constraints," with Tim Cook saying "we expect to pay even higher memory costs." Amazon raised 2026 capex to ~\$220bn from ~\$200bn and named higher memory costs as the reason. This is now the defining split of the cycle, and it is no longer a forecast — it is in guidance.
3. **The bond market did not participate in any of it.** The 30-year sat at 5.21%, the same 19-year high it printed on Wednesday, after touching 5.234% during Asian hours. The 10-year added 4bp to 4.663% having been up 8bp at 4.704% overnight. The 2-year drifted 2bp higher to 4.25%. So the curve did not un-steepen; it simply stopped steepening. Equities rallied 1.7% into an unchanged 19-year high in the long bond, which means Thursday was a positioning event inside the equity market rather than a repricing of the macro. Nothing about the discount rate got better.
4. **And the day's real macro news came out of Tokyo, not Washington.** USD/JPY fell 2.4% — the largest single-day yen gain since December 2022, when the BoJ shocked markets by changing yield curve control — dropping from roughly 163.4 to a low of 157.8 and settling near 159.70. The move dragged DXY down 0.91% to 99.97, through Hedgeye's 100.52 floor. CNBC reported the cause "was not immediately clear"; FXStreet, Reuters and multiple desks attributed it to suspected MoF/BoJ intervention, with analysts noting that month-end flows, soft US data and a broadly weak dollar gave Japanese authorities an unusually good window. The yen had hit a 40-year low of 163.99 hours earlier. The BoJ decides TODAY. If Tokyo has just spent reserves defending 160 and then holds at 1.00% with dovish guidance, it has to explain the contradiction inside the same 24 hours.

3 Rates, currencies & commodities

- **Rates:** 30Y 5.21% (+7bp), 10Y 4.663% (+4.1bp), 5Y 4.375% (+2.3bp), 2Y 4.25% (+2bp), 13-week bill 3.675% (+1.7bp). The overnight Asian session was the violent part — 10Y +8bp to 4.704%, 30Y +9bp to 5.234%, 2Y +5bp to 4.283% — and then roughly half of it came back during US hours as GDP missed. UOB's framing is the right one: the post-FOMC steepening reflects "reduced expectations for near-term policy tightening but rising concerns over longer-term inflation and fiscal risks." Credit went the other way: **HYG DOWNGRADED Neutral → BEARISH** (78.90–79.70) and **LQD** still bearish, range lowered to 105.5–107.3.
- **The yen, and therefore the dollar.** USD/JPY 159.70, –2.4%, having traded as low as 157.80 — a near-5-yen round trip from a fresh 40-year low of 163.99. It is the biggest one-day yen gain since December 2022. DXY 99.97 (–0.91%), through Hedgeye's 100.52 floor. EUR/USD 1.1530, GBP/USD 1.3465, AUD/USD 0.7030 — note the euro is up from 1.1477 and sterling from 1.3374, so this is dollar weakness broadly, not a yen-only event. The Japanese Yen Currency Index rose 2.44%, the largest single-day move of any major on the board.
- **Oil gave a little back, and the range held.** WTI settled around \$83.59 (–1.0%) and Brent around \$89.03 (–1.9%), both easing despite the US striking a dozen Iranian targets overnight and a drone hitting two vessels at Egypt's Damietta port. Hedgeye **RAISED** the WTI floor to 79.26 (from 76.97) and kept the ceiling at 92.96, still **BULLISH**. Keith has now added CERY alongside XLE and CRAK. Energy was +0.98% on the day — a positive sector on a day the commodity fell, which is the market paying for the multi-year story rather than the spot price.
- **Metals did the Quad 3 work.** Gold settled near \$4,160.60 (+1.55%) and is \$4,168.20 overnight — a **SECOND** consecutive close through a \$4,136 ceiling that Hedgeye had already raised. Silver ~\$59.02 → \$59.32, pressing the \$60 top of a band still labelled bearish. Copper ~\$6.475 → \$6.502 (+2.6%), with the ceiling raised to \$6.55. Nat gas ~\$2.758 → \$2.746, still bearish (2.55–2.95). Precious and industrial metals rallying together while the dollar breaks its floor and oil eases is the cleanest expression yet of the August Quad 3 call — and it is happening in metals rather than energy, which is a change from Wednesday.

4 Hedgeye Risk Ranges & regime

Regime: July monthly Quad 4 ends today; August is modelled Quad 3, and Thursday's Early Look — "You Think You Just Fell Out of a Coconut Tree?" (Drago Malesevic, CFA, 07:25 EDT) — put hard numbers on it. The July inflation nowcast is running at **+3.48%**, only 5bp of sequential deceleration from June against the **24bp of disinflation modelled at the start of the month** — and "almost all of that gap traces back to energy." As a result the probability assigned to a monthly Quad 3 print in August has risen **from 30% to 50%**, and the probability of inflation accelerating **from 55% to 91%**. The note's discipline point is the one worth keeping: a well-built geopolitical thesis on Hormuz "is a starting hypothesis, not a conclusion... Conviction and attachment are not the same thing, and confusing them is where most of the real risk tends to live." Keith has gone long XLE, CRAK and CERY over two days — "not because of any certainty about how the situation with Iran resolves, but because that is what the Signal had green-lit."

Instrument	Immediate-term risk range	TREND	Change vs Wednesday
S&P 500 (SPX)	7,276 – 7,462	Bullish	LOWERED from 7,356–7,549; close 24pts under the ceiling
Nasdaq Composite (COMPQ)	24,258 – 25,570	Bearish	Lowered; floor recovered by 864pts
Russell 2000 (RUT)	2,887 – 2,978	Bullish	Lowered from 2,923–2,991; floor recovered
US 10Y yield	4.58 – 4.75%	Bullish	RAISED from 4.54–4.72%; spot mid-range
US Dollar (DXY)	100.52 – 101.60	Bullish	LOWERED again; close BROKE the floor
WTI crude	\$79.26 – \$92.96	Bullish	Floor RAISED 76.97 → 79.26
Nat gas	\$2.55 – \$2.95	Bearish	Floor trimmed 2.56 → 2.55
Gold	\$3,980 – \$4,136	Bearish	Nudged up; o/n price is THROUGH the top again
Silver	\$55 – \$60	Bearish	Unchanged; spot \$59.32 pressing the top
Copper	\$6.14 – \$6.55	Bullish	Ceiling RAISED 6.52 → 6.55
VIX	16.65 – 21.50	Bullish	UPGRADED from Neutral; band widened; close near the floor
HY credit (HYG)	78.90 – 79.70	Bearish	DOWNGRADED from Neutral — third flip in four days
IG credit (LQD)	105.5 – 107.3	Bearish	Both ends lowered
Tech (XLK)	\$163 – \$177	Bearish	Floor cut hard, 169 → 163; ceiling

Instrument	Immediate-term risk range	TREND	Change vs Wednesday
			179 → 177
Health Care (XLV)	\$160 – \$168	Bullish	Floor trimmed 161 → 160
Utilities (XLU)	\$44.07 – \$46.28	Bullish	LOWERED from 45.00–46.62
Real Estate (XLRE)	\$44.97 – \$46.50	Bullish	Ceiling cut 46.88 → 46.50

Ranges are from Thursday's Early Look, published 07:25 EDT Thu off Wednesday's close — i.e. they framed the session just traded. TWO were broken: the DOLLAR through its floor (99.97 vs 100.52) and GOLD through its ceiling on the overnight print. Everything else held, including the three equity floors that broke on Wednesday. Signal changes vs Wednesday: VIX Neutral → BULLISH (band 16.07–19.93 → 16.65–21.50); HYG Neutral → BEARISH (79.02–79.80 → 78.90–79.70). Thursday's Early Look did not publish USD/JPY, Brent, Nikkei, Shanghai or DAX ranges. Friday's Early Look publishes ~19:25 GMT+8, after this brief.

Also on the desk. MOMO Tracker: "Mag7 (–1.4%), MSFT=NEUTRAL; RR=+11%/–2%, High Beta Mo=(–)YTD, Tech Wreck Reaching Exhaustion" — published Thursday morning off Wednesday's close, hours before the exhaustion actually printed. Note the second item: the momentum basket is now NEGATIVE year-to-date, having been the trade of the year. **Crypto Quant:** "BTC (+1.8%), ETF Flows Yawn, Put Buying Resumes, Supply Underwater=47%" — nearly half of all bitcoin supply is now held below cost. And the most-read piece on the platform: **"Goldman's High Beta Momentum Basket on Track For Worst Monthly Performance in History."** That record is set at today's close.

5

Mag7 scoreboard (Thu 30 Jul)

Name	Last	Day	Cap	Read
Microsoft (MSFT)	\$451.10	▲ +15.51%	\$3.35T	Biggest one-day gain since 2008 and the LARGEST single-day market-value gain by any company ever (~\$450bn). Azure FY26 revenue passed \$100bn.
Apple (AAPL)	\$333.43	▼ -1.41%	\$4.90T	Then fell ~6% AFTER HOURS. Rev \$109.4bn (+16%) and EPS \$2.02 both beat; Services \$30.74bn MISSED; Sept quarter guided light on memory costs.
Amazon (AMZN)	\$235.50	▲ +3.90%	\$2.53T	Then +9.15% AFTER HOURS to ~\$257. AWS +37% to \$42.2bn — fastest in 15 quarters. Capex raised to ~\$220bn; FCF negative.
Nvidia (NVDA)	\$195.04	▲ +2.65%	\$4.72T	Recovered a fraction of a ~10.4% week. Still the laggard of the semi rally — the memory names took the flows
Alphabet (GOOGL)	\$333.66	▼ -0.91%	\$4.08T	The safe harbour stopped being needed. Down on a +2.78% Nasdaq day — the rotation reversed out of it
Meta (META)	\$539.03	▼ -7.95%	\$1.37T	WORST Mag7 day. EPS \$6.18 missed by \$1.04; Q3 revenue guided \$61–64bn vs \$63.15bn consensus. Extends a historic losing streak
Tesla (TSLA)	\$308.85	▲ +3.53%	\$1.22T	Reclaimed \$300 two sessions after losing it. Still –34% YTD; no catalyst of its own

Prices are Thu 30 Jul official cash closes (16:00 EDT) from a single consistent snapshot; market caps as reported by the same source. Four of seven rose. Microsoft's market cap went \$2.90T → \$3.35T in one session. After-hours moves for Apple and Amazon are indicative and were still moving at the time of writing.

6

Positioning & options

- **The forced seller is the story, and it is now largely done.** Situational Awareness peaked at \$45bn at the start of July and was ~\$24bn by Thursday; it has been compelled to unwind its entire public equity book. The trade was leveraged long AI hardware / short enterprise software — the most crowded expression in the market — and both legs moved against it at once, with SK Hynix falling on the long side while Adobe and

peers rallied on the short. Prime brokers were marketing its baskets pre-open Thursday. JPMorgan's conclusion, written Wednesday: the April-May leverage build "has been largely unwound" and there is "more limited room for any further deleveraging."

- **Vol unwound as fast as it built.** VIX -17.28% to 17.09, a complete round trip of Wednesday's +13.45% break, and it now sits 0.44 above the floor of a band Hedgeye WIDENED and UPGRADED to bullish that same morning. That combination — a bullish vol signal with spot pinned near the range floor — is the mirror image of Wednesday, when a neutral signal sat near a ceiling that then broke. Two days, two opposite setups, and the process changed the signal on both.
- **Breadth was much narrower than the index.** Shortly after the open the S&P was +1% with only 243 gainers and just five of eleven sectors positive. Technology alone did +5.05%; Consumer Defensive (-2.13%) and Communication Services (-2.11%) were outright down. This was not a broad risk-on — it was one sector, driven by one supply headline and one earnings report, dragging a 31.6%-weighted index behind it.
- **Credit refused to confirm.** HYG was DOWNGRADED back to Bearish on the same morning that equity vol collapsed 17%. Over four sessions the HY signal has gone Neutral → Bearish → Neutral → Bearish. LQD has not wavered from bearish and both ends of its range came down again. When the highest-beta part of the equity market rallies 5% and credit gets marked down, the honest read is that Thursday repriced positioning, not the cost of capital.
- **Month-end lands today, on a record.** Goldman's High Beta Momentum basket is on track for the worst monthly performance in the series' history, and Hedgeye's MOMO Tracker now flags it as NEGATIVE year-to-date. Thursday's +18% in Micron and +13% in AMD claws some of that back but does not repair a month. Rebalancing into a factor move of this size produces flows that have nothing to do with anybody's view — and today is the last trading day.

7 Sector rotation — leaders & laggards (Thu)

- ▲ **Leaders:** Technology +5.05% (best day since April 2025; now +16% YTD and back green on the week), Consumer Cyclical +1.33%, Industrials +1.10%, Energy +0.98%, Financial Services +0.86%, Utilities +0.02%. Single names: Fervo Energy +30.6%, IREN +30.5%, MarketAxess +29.5% (ICE agreed to buy it at \$167/share cash, a 33% premium, ~\$5.7bn EV), Bausch Health +28.9%, CIPHER +28.1%, SanDisk ~+22%, Micron +18.4%, Western Digital ~+18%, TeraWulf +18.1%, MARA +17.6%, SK Hynix ADR +17.5%, Lam Research ~+17%, Seagate ~+16%, Microsoft +15.5%, AMD +13.0%, Intel +11.4%, Ondas +11.0%, Plug Power +10.0%, SoFi +8.1%, Nokia +8.0%, Broadcom +4.7%. The PHLX Semiconductor index was up more than 7% at 14:45 ET.
- ▼ **Laggards:** Consumer Defensive -2.13% (worst), Communication Services -2.11%, Healthcare -1.16%. Single names: Alnylam -28.3%, Rentokil -17.6%, Adidas -17% (guidance upgrade short of expectations), Group 1 Automotive -17.1%, Fair Isaac -17.0%, C.H. Robinson -15.4%, Crocs ~-10% (beat and raised, but margins and Q3 light), Meta -8.0%, Norwegian Cruise -7%+ ("the vast, vast majority of our problems... are self-inflicted"), AT&T -3.1%, Ford -2.6%, Qualcomm -2.6%, Apple -1.4%, Alphabet -0.9%, Netflix -0.6%.
- ◆ **Rotation read:** Wednesday, seven of eleven sectors fell and the leadership itself broke. Thursday, the mirror: the two sectors that HELD UP on Wednesday — Consumer Defensive (+0.27%) and Communication Services (+0.08%) — were the two worst on Thursday, at -2.13% and -2.11%. Money did not arrive from the sidelines; it came straight out of the defensive leg and went into the thing that had just been destroyed. That is what a short-covering and de-grossing reversal looks like from the inside, and it is the reason the index gained 1.66% with fewer than half its members participating at the open.

8 Forward — futures & the week ahead

- **Futures (07:01 GMT+8):** S&P +0.17% (7,485.50), Nasdaq-100 +0.57% (28,400.00), Dow +0.19% (52,482), Russell +0.21% (2,960.60). A quiet extension of Thursday's rally, with the Nasdaq again doing the work — Amazon's +9% after hours against Apple's -6% roughly nets out at the index level. Overnight: WTI \$84.06, Brent \$89.45, gold \$4,168.20, silver \$59.32, copper \$6.502, nat gas \$2.746, DXY 99.97, USD/JPY 159.70, BTC ~\$64.8k, ETH ~\$1,926.

Day	Key events (GMT+8)
Fri 31 (today)	★ BoJ decision + quarterly Outlook Report (~11:00–12:00), Ueda press conference ~14:30. Consensus is a hold at ~1.00% with the FY2026 GDP forecast upgraded toward ~0.8% from 0.5%. The meeting is now materially more interesting than it was 24 hours ago: authorities are suspected of having intervened to defend the yen hours before it, after USD/JPY set a 40-year low of 163.99. ANZ sees the next 25bp hike as soon as October, earlier if yen weakness persists. ★ MONTH-END — last trading day of July, into the worst month on record for Goldman's High Beta Momentum basket. Exxon and Chevron report pre-open into ~\$89 Brent; Shell already posted its best quarter since Q2 2022 at \$9.84bn adjusted.
Watch	Whether Thursday's semis reversal survives contact with Asia — Tokyo Electron, Lasertec, Advantest, SK Hynix and TSMC all get their first chance to price a Samsung supply warning, a +18% Micron and a finished forced seller. The US struck a dozen Iranian targets overnight Wednesday/Thursday and a drone hit two vessels at Egypt's Damietta port; Hormuz transit remains under 10 ships a day against ~100 pre-war. Trump says strikes were halted at Tehran's request and will resume absent

Day	Key events (GMT+8)
	a deal; Qatar and Pakistan are mediating. And the 30Y at 5.21% — unchanged through a +1.7% equity day — is still the number that matters more than any of it.

9 Corporate news

- **Apple FQ3: beat the quarter, lost the guide.** Revenue \$109.42bn, +16.4% y/y, against ~\$108.9bn expected. EPS \$2.02 vs \$1.89. Net income \$29.8bn, +27.1%. Operating cash flow \$34.4bn, +23.3%. iPhone \$54.3bn, +21.7%, a June-quarter record, at 49.6% of revenue. The problems were in the other two lines: Services \$30.74bn against ~\$31.22bn expected, and September-quarter guidance issued light on "supply constraints." Tim Cook, explicitly: "we expect to pay even higher memory costs." Shares fell roughly 6% after hours toward ~\$311, putting the \$5trn market cap back out of reach. Apple is the purest large-cap short of the memory shortage and it just said so.
- **Amazon Q2: the cloud number the bulls wanted, and the cash-flow number the bears wanted.** Net sales \$200.6bn, +20% (vs ~\$196bn expected). **AWS +37% y/y to \$42.2bn** against ~31% expected — the fastest growth since 2021 and the fastest in 15 quarters — with the AI business and Amazon's own silicon each running above a \$25bn annualised rate, more than doubling y/y. EPS \$5.75 against ~\$1.81 consensus, though the profit line is flattered by a large non-recurring investment gain tied to the Anthropic stake. Against that: 2026 capex raised to ~\$220bn from ~\$200bn, explicitly citing higher memory costs, and trailing-twelve-month free cash flow now an OUTFLOW of \$7.6bn against a \$18.2bn inflow a year ago — negative for the first time since 2023. Shares +9.15% after hours to ~\$257. The market chose the growth rate over the cash flow, exactly as it did with Microsoft.
- **Microsoft, in the cold light of day.** The stock closed +15.51% at \$451.10, adding about \$450bn — the largest single-day market-value gain by any company in history, and its own biggest day since 2008. The detail that did it was Azure FY26 revenue crossing \$100bn for the first time, on 43% constant-currency growth against a 40.2% StreetAccount estimate. CFO Amy Hood pointed to "demand signals across our portfolio" for further FY27 capex growth. Q4 capex and finance leases were \$41bn, +69%. Note the accounting: Microsoft is lengthening the useful life of office and data-centre buildings from 15 to 25 years and shifting more future leases to operating from finance, which brings the reported 2026 figure to roughly \$175bn.
- **Deals and debuts.** ICE agreed to acquire MarketAxess at \$167 per share in cash — a 33% premium to Wednesday's close, ~\$5.7bn enterprise value, closing 1H27 — and the stock rose 29.5%. Jersey Mike's opened at \$21 against a \$23 IPO price, raising ~\$1bn at a \$7.3bn valuation and trading 9% below the deal at the open before recovering to ~\$22.10. Zhongji Innolight fell 5% on its Hong Kong debut after raising HK\$53.4bn (\$6.8bn), Asia's second-largest listing this year behind CXMT's \$8.6bn Shanghai IPO.
- **Europe, and the energy windfall.** Shell posted adjusted earnings of \$9.84bn — its best quarter since Q2 2022 — against \$8.79bn expected and more than double the \$4.26bn of a year ago, on the Iran war's oil shock; CEO Wael Sawan called oil volatility "the new normal." BAE Systems beat and raised (H1 sales +9% to £15.8bn, underlying profit +13%). Rolls-Royce beat across all businesses and raised full-year profit and cash guidance, +4%, with data-centre power orders up more than 50% in H1. Airbus beat on both lines and still fell 2.6%, with defence profits +90% y/y. Adidas cratered 17% on a guidance upgrade that fell short. The Bank of England held at 3.75% on a 6–3 vote; euro-zone Q2 GDP surprised at +0.4% against +0.2% expected.

10 Macro data

- **Growth missed, inflation did not.** Q2 GDP advance +1.5% annualised against +1.8% expected (Dow Jones survey) and +2.1% in Q1 — driven by consumer spending, investment and exports, partly offset by falling government spending. Core PCE +0.1% m/m and **+3.3% y/y**, in line on the annual and a tenth below the +0.2% monthly forecast, easing from May's 3.4% — the highest since October 2023. Headline PCE -0.1% m/m, +3.7% y/y. Jobless claims 197,000 for the week to 25 July, +9,000 on a revised prior. Slower growth with 3%-handle core inflation and a 5.21% long bond is the least comfortable combination available to a committee that just had three members dissent for a HIKE.
- **And the print is already stale.** June core PCE measures a month that ended before July's oil move — WTI from the mid-\$60s to a \$92 high, down to \$79, back to \$84. Hedgeye's July nowcast is +3.48%, a mere 5bp of sequential deceleration against 24bp modelled at the start of the month, and "almost all of that gap traces back to energy." August is where it shows: the probability of a Quad 3 print has gone 30% → 50% and the probability of inflation ACCELERATING 55% → 91%. A soft-looking June number today is not evidence the problem is behind us; it is the last clean month before the commodity move lands.
- **The rest of the world eased, or held.** The Bank of England held at 3.75% on a 6–3 split, after UK headline inflation fell to 2.6% in June, a 15-month low. Euro-zone Q2 GDP grew 0.4% against 0.2% expected, rebounding from a Q1 contraction — with market pricing for a further ECB hike described as "a near certainty" by September. The BoJ decides today. Three of the four major central banks have now moved or held this week and the fourth is the one holding the currency that just moved 2.4%.
- **What the curve did with all of it.** Yields spiked in Asia (10Y 4.704%, 30Y 5.234%, 2Y 4.283%) and gave roughly half of it back across the US session as GDP missed, finishing 10Y 4.663%, 30Y 5.21%, 2Y 4.25%. So a growth miss bought back some term premium but did not touch the 19-year high. The market is not trading the level of activity; it is trading the credibility of the inflation target, and one soft GDP print does not speak to that.

11 Geopolitics

- ▼ **The US struck a dozen Iranian targets overnight.** Explosions were reported across several southern Iranian locations in the early hours of Thursday local time, following Wednesday's joint US–Saudi strikes on Iranian-backed Popular Mobilisation Forces in Iraq that killed at least 20, including four IRGC members. Saudi Arabia's acknowledged participation remains the structural change: a Gulf state has stopped hedging, and nothing since has walked that back.
- ▼ **The attack surface widened west.** Egypt confirmed that a drone struck two vessels at the Mediterranean port of Damietta — a regasification ship and a storage vessel — causing fires. Nobody has claimed responsibility. This is energy infrastructure roughly 2,000km from Hormuz, on the wrong side of Suez, which makes it a different category of risk from tanker attacks inside the strait: it is not about the chokepoint any more.
- ◆ **A negotiating track exists again, barely.** Trump said the US halted strikes at the Iranian regime's request and warned attacks would resume without a new ceasefire deal. Qatar and Pakistan are mediating toward restoring the interim ceasefire that collapsed in early July. That is more than existed 24 hours ago, when Iran had just rejected Oman's Hormuz transit mechanism outright — but it is a pause requested under fire, not a framework.
- **What the oil price actually did with all of it: nothing much.** Brent –1.9% to ~\$89.03 and WTI –1.0% to ~\$83.59 on a day that included fresh US strikes on Iran and a drone attack on Egyptian port infrastructure. That is the single most informative fact in this section. After a +7.9% Wednesday, the marginal headline no longer moves the barrel — which means the risk premium is now priced to a wide distribution rather than to the next news item. Hormuz transit is still running under 10 ships a day against ~100 pre-war, and that number, not the headlines, is what has to normalise.

12 Asia setup — today (Fri 31 Jul, pre-open)

Index	Thu 30 Jul close	Read
US futures	▲ modestly higher (NQ +0.57%)	Extending a +2.78% Nasdaq day. AMZN +9% AH vs AAPL –6% AH roughly offset
Nikkei 225	▲ 61,867.43 (+0.71%)	Led Asia on tech and consumer non-cyclicals; traded as high as 62,925. BoJ TODAY with the yen 2.4% stronger
Kospi (Korea)	▼ 5,593.56 (–1.23%)	Choppy. Samsung beat — record Q2 OP, +1,814% y/y, revenue +130% — and still closed –0.72%. Third down day
Taiwan (TWII)	▼ 39,933.30 (–0.26%)	Fourth down session but the damage stopped; ranged 39,405–41,155. Below 40,000, just
Hang Seng	▲ 25,858.88 (+0.20%)	Green for a third straight day. The steadiest index in the region
Shanghai	▼ 3,804.69 (–0.62%)	CSI 300 –1.10%. Politburo readout still pending
S&P/ASX 200	▼ 8,967.70 (–0.78%)	Gave back Wednesday's +1.01% as Brent slipped under \$90
Straits Times	▼ 5,673.58 (–0.69%)	Off Wednesday's 52-week high, but only just
Sensex	▲ 77,928.15 (+0.35%)	Third straight gain. India remains the region's non-correlated leg

Read: Asia traded Thursday WITHOUT the two things that mattered — it closed before Samsung's memory-supply warning re-rated the entire complex in New York, and before the yen moved 2.4%. Both land at once at today's open, and they point in opposite directions for Japan: a +5% US technology sector and a +18% Micron are unambiguously good for Tokyo Electron, Lasertec, Advantest and Screen, while a yen at 159.70 is a direct earnings headwind for every Japanese exporter and the Nikkei has spent the year discounting a weak one. Then the BoJ decides at ~11:00–12:00 into that. Korea gets the cleanest catalyst — SK Hynix's ADR closed +17.5% in New York and UBS initiated at Buy with 61% upside — after three losing sessions in which Samsung beat and fell anyway. CME Nikkei futures were quoted 63,860 (+0.21%) at 07:01 GMT+8, well above Thursday's 61,867 cash close; treat the level as a contract quote with basis, not a clean gap indication. Brief lands ~08:00 GMT+8, pre-open; futures are indications, not cash.

13 AI watch

- **The shortage stopped being a risk and became a business model — for half the industry.** Samsung's warning that memory tightness could persist into 2028 converts a cyclical squeeze into a three-year pricing regime, and the market repriced it in a single session: Micron +18.4%, SanDisk +22%, Western Digital +18%, Seagate +16%, SK Hynix +17.5%, the memory ETF +13%. UBS put numbers behind it, initiating SK Hynix at Buy with a \$204 target and modelling DRAM demand growth of 36% in 2027 versus 22% in 2026 on agentic AI. Three weeks ago the memory complex was the epicentre of a –30.5% monthly drawdown. The facts did not change; the sign on them did.
- **And the same shortage showed up as a cost, in guidance, twice in one night.** Apple guided the September quarter light on supply constraints with Cook naming higher memory costs. Amazon raised 2026 capex by \$20bn to ~\$220bn and named higher memory costs. Qualcomm named it on Wednesday. That is three of the largest buyers of memory in the world putting the same line item into forward guidance within 48 hours. The hyperscaler capex debate has quietly changed shape: it is no longer only about how much compute they want, it is about what the inputs now cost.
- **The cloud numbers keep refusing to decelerate.** Azure +43% constant currency and past \$100bn of annual revenue; AWS +37% and accelerating to its fastest rate in 15 quarters, with AI and custom silicon each above a \$25bn run rate. Two weeks of "AI demand is rolling over" commentary

- did not survive two earnings reports. What survived intact is the funding question: Microsoft is guiding FY27 capex to \$255–260bn, Amazon to ~\$220bn for 2026, and Amazon’s trailing free cash flow has gone from +\$18.2bn to –\$7.6bn. Demand is not the variable. The balance sheet is.
- **The most instructive AI story of the day was not a company.** A \$45bn fund built by a former OpenAI researcher, running the most intellectually fashionable trade in the market — long the hardware, short the software it disrupts — was margin-called into liquidating its entire public book, having been right about the technology and wrong about the price path. Its short leg blew up because beaten-up enterprise software rallied. Being correct about the destination is not a risk-management process. That is the same point Hedgeye’s Early Look made this morning about Hormuz, and it is a coincidence worth noticing.

14 Beyond the markets

- **A central bank may have spent reserves to defend a currency it is about to decide on.** If Thursday’s 5-yen move was intervention, then Japan has now used its balance sheet at 160 and will set policy at 1.00% within about 20 hours. Intervention buys time; it does not buy a rate differential. With the Fed showing three hawkish dissents and the BoJ at 1%, the carry that pushed the yen to a 40-year low is intact whatever the MoF does with reserves. Either Ueda validates the defence with hawkish guidance today, or the market gets to test whether Tokyo will keep paying for a level it will not raise rates to protect.
- **Growth at +1.5% with core inflation at +3.3% is the uncomfortable quadrant.** It is not stagflation, and calling it that would be lazy. But it removes the easy story from both camps: the doves cannot point at collapsing demand, and the hawks cannot point at booming activity. It is precisely the configuration in which a committee splits three ways — which is exactly what it did on Wednesday — and in which the long end demands more term premium rather than waiting for guidance that no longer exists.
- **A record was set on Thursday that says something about market structure.** One company added roughly \$450bn of market value in a single session — the largest one-day gain ever recorded — which is more than the entire market capitalisation of all but about twenty companies on earth. That is what happens when index concentration meets a 15% move in a 6%-weighted constituent. The same arithmetic that produced Thursday’s +2.78% Nasdaq is what produced the six days before it.
- **July closes today, and it will be studied.** A momentum factor posting its worst month in recorded history; a \$45bn fund liquidated; a Fed with three one-directional dissents for the first time since 2016; a 19-year high in the 30-year; a Gulf state entering a shooting war; a 40-year low in the yen followed by the biggest one-day yen rally in nearly four years; and the largest single-day market-value gain by any company in history — all inside 22 trading sessions. Hedgeye’s Early Look this morning warned against falling in love with a well-built case. A month like this one is a good argument for the warning.

15 Appendix — stock cards

Names in focus plus top global names — last + day · market cap · next key date · one-line read. Prices are Thu 30 Jul cash closes unless flagged * (prior/approx/delayed/intraday). No charts.

US — the two that reported tonight

Apple (AAPL) \$333.43 ▼ -1.41% Cap \$4.90T Next: REPORTED TONIGHT Rev \$109.4bn +16%, EPS \$2.02 vs \$1.89 beat. Services \$30.74bn MISSED. Sept guide light on memory costs. ~-6% AH.	Amazon (AMZN) \$235.50 ▲ +3.90% Cap \$2.53T Next: REPORTED TONIGHT AWS +37% to \$42.2bn, fastest in 15 quarters. EPS \$5.75 (flattered by Anthropic gain). Capex → \$220bn. +9% AH.
--	---

US — mega-caps & the memory rip

Microsoft (MSFT) \$451.10 ▲ +15.51% Cap \$3.35T Next: Reported 29 Jul Largest single-day market-value gain by any company ever (~\$450bn). Azure FY26 revenue past \$100bn.	Meta (META) \$539.03 ▼ -7.95% Cap \$1.37T Next: Reported 29 Jul Worst Mag7 day. EPS missed by \$1.04; Q3 revenue guided below consensus. Historic losing streak extends.
Nvidia (NVDA) \$195.04 ▲ +2.65% Cap \$4.72T Next: Reports late Aug The laggard of its own sector’s best day since April 2025. Flows went to memory, not to compute.	Alphabet (GOOGL) \$333.66 ▼ -0.91% Cap \$4.08T Next: Reported 22 Jul Down on a +2.78% Nasdaq day. The safe-harbour bid unwound the moment semis stopped falling.
Micron (MU) \$874.66 ▲ +18.36% Cap \$987.8B Next: Reports late Sep The purest US expression of a memory shortage that Samsung says may run to 2028. Analysts hiked targets.	AMD \$485.39 ▲ +13.00% Cap \$791.5B Next: Reports 5 Aug Rode the complex higher without a company catalyst. Reports next week into a completely different tape.

Intel (INTC) \$91.13 ▲ +11.30% Cap \$459.7B Next: Reported 24 Jul Most-active name again, and +313% over 52 weeks. Domestic capacity is worth more when supply is short.	Broadcom (AVGO) \$387.84 ▲ +4.73% Cap \$1.85T Next: Reports early Sep Recovered most of a -6.7% week. Custom silicon participates in the rally but is not the epicentre of it.
Tesla (TSLA) \$308.85 ▲ +3.53% Cap \$1.22T Next: Reported 22 Jul Reclaimed \$300 two sessions after losing it. Still roughly -34% YTD with no catalyst of its own.	Qualcomm (QCOM) \$151.60 ▼ -2.62% Cap \$159.8B Next: Reported 29 Jul Second down day after guiding light and naming the memory crunch. The first name to eat the shortage.

Asia — the epicentre, and the currency

SK Hynix (SKHY ADR) \$148.93 ▲ +17.46% Cap \$1.06T Next: Reported 29 Jul UBS initiated Buy, \$204 target, 61% upside. Seoul has not yet priced any of Thursday's New York move.	Samsung Elec (005930) KRW* ▼ -0.72% Cap mega-cap Next: Reported 30 Jul Record Q2: OP +1,814% y/y, revenue +130%, beat estimates — and the shares still closed red. Its supply warning moved the world.
Tokyo Electron (8035) n/a* ► — Cap large-cap Next: Reports Aug Down 10.1% Wednesday. First chance today to price a +7% PHLX Semiconductor index — against a 2.4% stronger yen.	TSMC (2330 / TSM) w/ TWII* ▼ -0.26% idx Cap ~\$1.8T* Next: Reported 16 Jul Taiwan's fourth down day was its mildest. Foundry has no earnings catalyst until October.
Nikkei 225 61,867.43 ▲ +0.71% Cap — Next: BoJ TODAY Led Asia Thursday. Now faces a US semis melt-up and a 2.4% yen rally arriving in the same session.	USD/JPY 159.70 ▼ -2.4% Cap — Next: BoJ ~11:00-12:00 Biggest yen gain since Dec 2022. Low 157.8. Suspected MoF/BoJ intervention hours before the decision.

Energy, credit & the rest

Exxon (XOM) \$156.97 ▲ +0.14% Cap \$650.6B Next: Reports TODAY Reports pre-open into ~\$89 Brent, after Shell posted its best quarter since Q2 2022 at \$9.84bn.	Chevron (CVX) \$192.31 ▲ +0.23% Cap \$383.0B Next: Reports TODAY The second half of the US major read-through on a war-driven quarter. Hedgeye is long XLE, CRAK and CERY.
MarketAxess (MKTX) \$162.76 ▲ +29.45% Cap mid-cap Next: Deal closes 1H27 ICE to acquire at \$167/share cash — 33% premium, ~\$5.7bn EV. Electronic fixed income keeps consolidating.	Alnylam (ALNY) \$205.48 ▼ -28.31% Cap large-cap Next: Reported 30 Jul The day's worst large-cap, in the worst-performing complex. Healthcare -1.16% against Technology +5.05%.
SpaceX (SPCX) \$112.20 ▼ -0.31% Cap ~\$1.48T Next: Reports 4 Aug Roughly 50% below the 16 June high of \$225.64 and did not participate in the risk-on. Reports Tuesday.	Ford (F) \$14.88 ▼ -2.62% Cap \$59.3B Next: Reported 29 Jul Gave back Wednesday's beat-and-raise gain and more. The consumer names did not join Thursday's tape.

Data-confidence

CROSS-CHECKS PASSED: every Thursday close in this brief reconciles arithmetically against the 30 Jul edition's closes — S&P 7,316.15→7,437.63 (+121.48, +1.66%), Dow 51,594.14→52,208.06 (+613.92, +1.19%), Nasdaq 24,442.94→25,122.18 (+679.24, +2.78%), Russell 2,906.31→2,946.10 (+39.79, +1.37%), VIX 20.66→17.09 (−3.57, −17.28%). Asia ties exactly: Nikkei 61,434.19→61,867.43 (+433.24), Kospi 5,663.24→5,593.56 (−69.68), Taiwan 40,039.18→39,933.30 (−105.88), Hang Seng 25,807.92→25,858.88 (+50.96), Shanghai 3,828.47→3,804.69 (−23.78), ASX 9,038.60→8,967.70 (−70.90), Straits 5,713.19→5,673.58 (−39.61), Sensex 77,654.60→77,928.15 (+273.55). Every Mag7 name reconciles to the tick: AAPL 338.19→333.43, MSFT 390.54→451.10, NVDA 190.01→195.04, GOOGL 336.71→333.66, AMZN 226.65→235.50, META 585.61→539.03, TSLA 298.32→308.85, AVGO 370.32→387.84, QCOM 155.68→151.60, F 15.28→14.88. Microsoft's cap \$2.90T→\$3.35T is consistent with +15.51% and with the reported ~\$450bn gain.

KNOWN CONFLICTS — READ THIS: yield sourcing changed today and it matters. The 30 Jul edition used CNBC post-close cash levels (30Y 5.21%, 10Y 4.657%, 2Y 4.236%); CNBC's US2Y page now shows a Wednesday previous close of 4.229%, a 0.7bp difference from what was published yesterday. Today's 10Y (4.663%), 30Y (5.21%), 5Y (4.375%) and 13-week (3.675%) are Yahoo CBOE 15:00 EDT prints and the 2Y (4.25%) is CNBC at 17:05 EDT — these are different snapshot times and should not be treated as a single consistent curve. Separately, CNBC reported intraday Asian-hours levels of 10Y 4.704% (+8bp), 30Y 5.234% (+9bp) and 2Y 4.283% (+5bp); those are the session highs, not closes, and the "still at a 19-year high" claim rests on the 30Y holding 5.21% into the close. DXY: Yahoo puts Thursday's move at −0.91%, which implies a Wednesday close of 100.89 against the 100.80 published yesterday — the level (99.97) is firm, the percentage is Yahoo's own basis. Amazon's profit line is reported two ways in the sources: "\$62.6bn, or \$5.75 per share" and separately "\$30.25bn of net income including \$16.8bn of pre-tax Anthropic-related investment gains"; the EPS figure is consistent with the larger number and share count, but the profit quality caveat stands either way — do not treat \$5.75 as a clean operating result. Apple's after-hours decline is quoted between −4% and −6.65% (to ~\$311) across sources and was still moving at the time of writing.

KNOWN GAPS: sector percentages are Yahoo's own sector classification, not GICS S&P sector indices, so they will not tie exactly to CNBC's sector prints — CNBC put S&P 500 information technology at "nearly 5%" against Yahoo's +5.05%. Yahoo's sector board did not display Real Estate or Basic Materials at capture time, so those two are absent from the leaders/laggards list. Commodity "settles" are derived (live overnight quote less the stated change), not exchange settlement prints. Single-name moves for SanDisk (+22%), Western Digital (+18%), Seagate (+16%), Lam Research (+17%) and the memory ETF (+13%) are press-reported percentages, not captured in the same consistent snapshot as the tabled names. Samsung and Tokyo Electron are quoted as percentage moves only. Hedgeye's KM's Top 3 Things (Rates/QQQ/Factors) and the Monthly Quads chart were visible on the platform but their full text was not retrieved before publication; the MOMO Tracker and Crypto Quant are quoted from their published headlines. USD/KRW was not captured — still worth checking independently given a third down day in Korea.

TIMING & UNVERIFIED: today's BoJ decision window (~11:00-12:00 GMT+8, presser ~14:30) is the conventional schedule and was not confirmed against a primary BoJ release at the time of writing. The intervention attribution is SUSPECTED, not confirmed — CNBC stated the cause "was not immediately clear" and no Japanese official confirmation had been issued; if it turns out not to have been intervention, the read on today's BoJ changes materially. The CME Nikkei futures quote of 63,860 sits well above Thursday's 61,867 cash close and should be treated as a contract level with basis rather than a gap indication. Exxon and Chevron reporting pre-open today is carried forward from the prior edition's calendar. Situational Awareness fund sizes (\$45bn peak, ~\$24bn) are sourced to people familiar with the matter via CNBC and the firm disputed related reporting about an Anthropic stake sale. TIMING: brief generated ~07:50 GMT+8 Friday, pre-Asia-open, off a data snapshot taken 07:00-07:10. Futures, FX and overnight commodity levels move fast on Middle East headlines, on Big Tech after-hours and — today especially — on anything the BoJ says. Verify live before acting. This is the FULL Hedgeye edition (logged-in browser reachable).
