

Daily Need to Know

Monday, 31 August 2026 · Pre-market brief

Coverage window, capture method and edition notes are at the back, in section 16.

1 Market snapshot — the close, and where it is trading now

ASSET	LAST	CHANGE	NOTE
US CASH EQUITIES — FRIDAY 28 AUG SETTLE, 50 HOURS OLD			
S&P 500	7,711.76	▼ 0.25%	Closed at the 15th percentile of a 70.6-point range. High 7,771.48 failed under Hedgeye's 7,788 ceiling — the lower high Keith McCullough flagged as the number that matters.
Nasdaq Composite	26,402.42	▼ 0.52%	Closed at the 13th percentile of a 341-point range. Also a lower high.
Dow Jones	53,559.99	▼ 0.02%	Down 9.45 points. The only index that did not really move — value and financials absorbed the hit.
Russell 2000	2,972.37	▼ 1.39%	Closed exactly on the low. Low 2,972.37, close 2,972.37 — zero percentile. Sits 0.05% above Hedgeye's 2,971 floor.
Philadelphia SOX	11,469.66	▼ 3.47%	Worst index on the board, closed at the 10th percentile. 21.7% below its 52-week high — a bear market in semis running underneath a 1.3%-from-highs S&P.
EQUITY FUTURES — FRIDAY SETTLE; GLOBEX REOPENED 06:00, ONLY ~7 MIN OF TRADE AT CAPTURE			
ES (E-mini S&P)	7,722.00	▼ 0.27%	Basis to cash +10.2 — normal carry, confirming the cash print is a true settle. Friday volume 1.46m; the reopen has added almost nothing.
NQ (E-mini Nasdaq)	29,491.75	▼ 0.69%	Range 29,436–29,812 is Friday's. Session had not rolled at capture.
YM (E-mini Dow)	53,584	▼ 0.07%	Basis +24 to cash. Consistent.
RTY (E-mini Russell)	2,977.50	▼ 1.38%	Basis +5.1 . Small caps carried the whole day's damage into the weekend.
US TREASURY YIELDS — FRIDAY 17:00 ET CASH CLOSE, 49 HOURS OLD			
US 2-year	4.360%	▲ 12.6 bp	The number of the day. Closed at the session high and 1 bp off its 52-week high of 4.37%. The front end repriced a Fed hike.
US 5-year	4.491%	▲ 9.1 bp	Also closed at the high, 2 bp under its 52-week high.
US 10-year	4.730%	▲ 5.4 bp	Closed at the high; 1.8 bp from a 52-week high. Sits at 81% of Hedgeye's 4.60–4.76 band.
US 30-year	5.213%	▲ 1.8 bp	Barely moved. 2s10s compressed to 37 bp , 5s30s to 72 bp — a violent bear flattening, not a growth trade.
13-week bill	3.822%	▲ 4.6 bp	3m10y still +91 bp positive. The curve is not inverted; it is being crushed from the front.
ENERGY — FRONT-MONTH FUTURES, FRIDAY SETTLE (SESSION NOT ROLLED AT CAPTURE)			
WTI crude (CL1!)	\$83.40	▼ 0.16%	Range \$82.25–83.78. At 34.6% of Hedgeye's 81.01–87.91 band , TREND neutral.
Brent (BZ1!)	\$88.10	▼ 0.47%	Brent–WTI spread \$4.70 . Brent is ~24% above pre-war levels with Hormuz still shut.
Natural gas (NG1!)	\$2.888	▼ 0.89%	At 74% of the 2.71–2.95 band . Hedgeye moved it bearish→neutral Friday; needs a hold above ~3.02 for bullish TREND.
RBOB gasoline	\$3.0502	▲ 2.00%	The only energy contract up, and up hard. Crack widening into the driving-season tail.
METALS — SPOT, LIVE, REOPENED ~05:00–06:00, ROUGHLY ONE HOUR OF TRADE			
Gold (spot)	\$4,452.81	◆ 0.04%	Reopened at 4,457.80 , traded down to 4,426.49, recovered. Friday's damage was the story: GLD –3.24% . Spot sits at just 14.8% of Hedgeye's 4,399–4,763 band.
Silver (spot)	\$66.17	◆ 0.30%	SLV fell 4.38% Friday. Spot now sits at 2.8% of the 66–72 band — effectively on the floor Hedgeye bought against last week.
Copper (spot)	\$6.5054	◆ 0.01%	At 12.7% of the 6.47–6.75 band . COMEX futures at 6.659 carry a 2.4% premium to spot — measure the band on spot, as Hedgeye names it.
FX — DXY AND MAJORS LIVE AND THIN; KRW AND TWD STILL ON FRIDAY'S SESSION			

DXY	99.696	◆ 0.02%	Above Hedgeye's 99.66 ceiling — 103% of band, while the TREND signal is bearish. One-hour range of 2.4 bp; the change is noise, the level is not.
USD/JPY	160.15	◆ 0.05%	15-pip range in an hour. 160 is the line Tokyo watches for intervention rhetoric.
USD/KRW	1,378.39	▼ 0.24%	Friday's session, not live — Seoul spot is shut. Won firmed while KOSPI fell 1.79%.

VOLATILITY AND CRYPTO

VIX	14.42	▼ 0.55%	Fell on a day the front end blew out. Sits at 7% of Hedgeye's 14.26-16.47 band — 1.1% above the floor, 14.2% below the ceiling. Convexity is cheap.
Bitcoin	\$78,675.70	▲ 0.57%	The only genuinely live 24-hour market in this table. Range 77,970-79,390. Still 37.7% below its 52-week high.

Colour key: ▲ green = up · ▼ red = down · ◆ amber = a change measured over so little trading time that it carries no information. Reconciliation: the three headline index closes and point changes match the Associated Press "How major US stock indexes fared" wire for 28 Aug exactly; the 2-year and 10-year settles match independent wire copy to within 1 bp. Futures-to-cash basis is normal on all four contracts, confirming the equity settles. Full detail in section 18.

TL;DR

Kevin Warsh used his first Jackson Hole keynote as Fed chair to say inflation is still too high, and the market repriced September from a cut-or-hold into a live hike. The 2-year yield jumped 12.6 basis points to 4.36%, one basis point off a 52-week high, and closed on its high. Gold fell about 3% and silver 4.4%. The Russell 2000 closed exactly on its low. The SOX fell 3.5% and is 21.7% below its 52-week high.

Underneath the index level, Friday was not a sell-off — it was a violent rotation. Five of the Magnificent Seven rose, Amazon by 3.97%; Nvidia fell 4.58% and shed **\$251bn** of market value on its own while the other six added **\$337bn**. Communication services and consumer discretionary led; technology, utilities and industrials lagged. The S&P fell 0.25% with a positive-breadth internal.

The tension to hold today: Hedgeye's live risk-range set was published at 19:40 GMT+8 on Friday, before Warsh spoke. It calls September **Quad 1** — accelerating growth, expanding liquidity, bearish dollar, add beta — and Keith McCullough expects the Fed to cut four to eight times next year. The dollar has since closed *above* the top of Hedgeye's own band. Asia opens into a market pricing the opposite of what the backbone of this brief is calling.

2 The big picture — what it means

1. The front end did the talking, and it said "hike". A 12.6 basis point move in the 2-year is a two-standard-deviation day, and it happened with the 30-year up just 1.8 basis points. That shape — front end violently higher, long end static — is the market repricing the *path of policy*, not the outlook for growth or the term premium. CME futures had a September hike at roughly one-third before Warsh spoke; afterwards, estimates ranged from about 50% to 57% depending on the vendor. The FOMC meets **15-16 September**. The 2-year at 4.36% is one basis point from its 52-week high, so this is not a partial move — the front end is at the top of its year.

2. Gold and silver were sold as rate instruments, not as war hedges. This is the most instructive cross-asset fact of the session. The Strait of Hormuz remains closed, Brent is roughly 24% above pre-war levels, and precious metals still fell 3-4.4%. Real yields won. When the geopolitical bid loses to a 12 basis point front-end move, it tells you positioning in metals was crowded and rate-sensitive rather than defensively held. Silver spot at \$66.17 is now sitting on the floor of Hedgeye's 66-72 band, a level Hedgeye explicitly bought against on Friday morning.

3. The index hid a rotation that was larger than the index move. The S&P fell 0.25%; within it, communication services rose 1.42% and technology fell 1.55% — a 2.97 percentage point spread in a single session. Amazon rose 3.97%, Alphabet 1.74%, Microsoft 1.68%, Apple 1.63%. Nvidia fell 4.58% three days after a revenue beat and guidance above consensus. Money did not leave equities on Friday; it left semiconductors.

4. Small caps are the honest tape. The Russell 2000 fell 1.39% and closed *at* its low, at 2,972.37 against a session low of 2,972.37. It now sits 0.05% above the 2,971 floor of its Hedgeye risk range with a bullish TREND signal attached. Small caps are the most rate-sensitive equity cohort on the board, and they behaved exactly as a front-end shock says they should. If that floor breaks on Monday, the bullish TREND signal is the thing that gets tested first.

5. Volatility refused to price it. The VIX *fell* 0.55% to 14.42 on a day the 2-year moved 12.6 basis points and the SOX fell 3.5%. It sits 1.1% above its Hedgeye band floor and 14.2% below the ceiling. Positive dealer gamma mechanically damps both tails, which is a good explanation for the calm and a poor reason to be comfortable — it means the hedge is cheap into a payrolls print on Friday and an FOMC in a fortnight.

6. Europe went the other way, and that matters for the dollar. The DAX rose 0.77% to 26,570, within 0.18% of its 52-week high and at 96% of its Hedgeye band. The Euro Stoxx 50 added 0.95%, the CAC 0.98%, Spain's

IBEX 0.81%. A hawkish Fed that lifts the dollar cuts directly against the euro, Spain and Canadian-dollar longs Hedgeye added last week. The DXY closing at 99.696 — above the 99.66 top of Hedgeye's own range while the TREND signal reads bearish — is the single cleanest piece of evidence that Friday's macro event has not yet been absorbed into the published levels.

7. The inflation data underneath all of this has stopped improving. July PCE, released Wednesday 26 August, printed headline **3.7%** year on year against consensus of 3.6% — a 0.1 point miss — with core **3.3%**, exactly in line, and both up 0.2% on the month. Core has not moved. With Brent near \$88 and the EIA not expecting Middle East production to normalise until early 2027, the energy pass-through argument that let the Fed look through headline prints has weakened considerably. That is the ground Warsh is standing on.

3 Rates, currencies & commodities

- **The bear flattening is the trade of the week.** 2s10s compressed to **37 bp** as the 2-year added 12.6 bp and the 10-year only 5.4 bp. 5s30s sits at **72 bp**. Every tenor from 3-month to 10-year closed at its session high — a one-directional, no-retracement repricing.
- **Bond volatility disagrees with equity volatility.** The MOVE index rose 1.58% to **70.97** — still historically subdued, near the low end of a 55.8–115.0 annual range. Rates repriced violently in *level* without repricing in *expected volatility*. One of those two markets is wrong.
- **Credit did not blink.** HYG fell 0.16% to 79.74, sitting mid-band at 42.6% of Hedgeye's 79.54–80.01 range, TREND bullish. LQD fell 0.36% to 106.35, TREND bearish. High yield outperforming investment grade on a rate shock is the correct relative behaviour and confirms this was a rates event rather than a credit event.
- **The dollar is the pressure point.** DXY at **99.696** has closed above the 99.66 top of Hedgeye's published band. EUR/USD 1.15809, GBP/USD 1.35304, AUD/USD 0.71591 — all effectively unchanged in an hour of thin trade. USD/CNH at 6.72889 is within 0.2% of its 52-week low, so the renminbi is not yet transmitting dollar strength.
- **Crude is stuck in the middle of its range despite a closed strait.** WTI \$83.40 at 34.6% of band, Brent \$88.10, spread \$4.70. The IEA and EIA both frame Middle East supply as impaired into early 2027; OPEC+ has reportedly seen its share of global output fall from above 48% pre-war to roughly 40% in July. Crude is not pricing escalation, and it is not pricing resolution.
- **Natural gas just changed signal.** Hedgeye moved it from bearish TREND to neutral on Friday after a higher low and a bullish TRADE breakout. At \$2.888 it sits at 74% of the 2.71–2.95 band. Henry Hub needs to clear and hold roughly **3.02** to establish bullish TREND. Keith McCullough said he is waiting for that confirmation rather than anticipating it.
- **Wheat is the quiet mover.** CBOT wheat rose **3.06%** to 784, closing at its 52-week high of 790.25's doorstep. A grain contract at a 52-week high while the Fed is being repriced hawkish is a food-inflation input worth watching, and nobody led with it.

4 Hedgeye — regime, risk ranges & the Quad path

DASHBOARD	READING
Live Early Look	"The Golden Age of Snake Oil #Quad1" , R. Patrick Kent, published Fri 28 Aug 07:40 ET = 19:40 GMT+8 Friday . Hedgeye does not publish at weekends, so this remains the live risk-range set. Monday evening's Early Look supersedes it.
Quad path	August Quad 3 → September Quad 1. Stated explicitly by Keith McCullough on The Macro Show, Fri 28 Aug 10:25 ET = 22:25 GMT+8. The transition takes effect tomorrow.
Regime posture	#Quad1 risk-on: accelerating growth, expanding liquidity, stable credit. S&P 500, Russell and Nasdaq all in the Investable Bucket.
Forward macro view	Q3 GDP tracking ~3.5–4%; 485 S&P companies reporting ~52% earnings acceleration. Growth then expected to slow substantially and inflation to fall sharply, forcing four to eight Fed cuts next year .
Core longs	Software (IGV), Silver (SLV), Gold, Copper Miners (ICOP), Healthcare (XLV), Euro, Canadian dollar (new), Spain (EWP, new), New Zealand (ENZL), Colombia (COLO), Nvidia.
Core shorts	Tesla, US dollar, KOSPI, SanDisk. Explicitly not long semiconductors in the macro book.
Flagged risk	S&P 7,788 is the first lower high after a run of higher highs. If Nasdaq volatility clears 22 , Friday's inclusion of Nasdaq vol in the investable bucket is void.

RISK RANGE™ SIGNALS — WHERE FRIDAY'S SET STANDS AGAINST THIS MORNING'S PRINTS

INSTRUMENT	FLOOR	CEILING	NOW	% OF BAND	TREND	WHERE IT STANDS
UST 10Y yield	4.60	4.76	4.730	81.3%	bullish	3.0 bp from the ceiling after Friday. A break above 4.76 invalidates the band on the first day of the new Quad.
HYG	79.54	80.01	79.74	42.6%	bullish	Mid-band. Credit is the one asset that did not react.

LQD	105.6	107.0	106.35	53.6%	bearish	Mid-band with a bearish signal; a hawkish Fed argues the signal is right.
S&P 500	7,620	7,788	7,711.76	54.6%	bullish	Friday's high of 7,771.48 stopped 16.5 points short of the ceiling. 1.20% of downside to the floor.
Nasdaq Composite	25,814	26,750	26,402.42	62.9%	bullish	1.32% below the ceiling, 2.28% above the floor.
Russell 2000	2,971	3,053	2,972.37	1.7%	bullish	Sitting on the floor. 1.37 points of cushion. The single most fragile line in the table.
XLV	168	179	171.16	28.7%	bullish	Lower third. Healthcare hit an all-time high before correcting.
RSP (equal weight)	219.00	225.00	220.69	28.2%	bullish	0.77% above the floor. Breadth is closer to the floor than the cap-weighted index is.
SSEC (Shanghai)	3,836	3,990	3,952.18	75.4%	neutral	Upper quartile into China's August PMIs this morning.
Nikkei 225	64,101	68,722	66,405.34	49.9%	bullish	Dead centre. Friday's close; Tokyo has not opened.
DAX	25,966	26,593	26,569.99	96.3%	bullish	23 points from the ceiling and 0.18% from a 52-week high. Europe is where the band is about to break upward.
VIX	14.26	16.47	14.42	7.2%	bearish	Effectively on the floor. 14.2% of upside to the ceiling — the cheapest convexity in the table.
USD (DXY)	98.50	99.66	99.696	103.1%	bearish	Broken above the ceiling against a bearish TREND. The band and the tape disagree, and the band predates Warsh.
WTIC (CL1! cont.)	81.01	87.91	83.40	34.6%	neutral	Measured on the continuous contract, as Hedgeye names it. 5.41% to the ceiling.
NATGAS (NG1! cont.)	2.71	2.95	2.888	74.2%	neutral	Upgraded from bearish Friday. 2.15% below the ceiling.
Gold (spot)	4,399	4,763	4,452.81	14.8%	bullish	Measured on spot . COMEX futures at 4,529.90 carry a 1.73% premium; using futures would have put gold at 35.9% of band — more than twice the true reading.
Copper (spot)	6.47	6.75	6.5054	12.7%	bullish	Measured on spot . COMEX at 6.659 is a 2.36% premium. 0.55% of cushion to the floor.
Silver (spot)	66	72	66.17	2.8%	bullish	Measured on spot . COMEX at 67.786 is a 2.45% premium. On the floor , 8.81% from the ceiling — the widest asymmetry in the table.

Band movement versus the prior session is **UNKNOWN**, not unchanged. The Early Look category page does not paginate — page 2 and page 3 both return the 28 August note — and no alternate route to the 27 August note succeeded this run. Metals are measured on spot (TVC:GOLD, TVC:SILVER, OANDA:XCUUSD) and energy on the continuous contract (NYMEX:CL1!, NYMEX:NG1!), matching the series Hedgeye names in the published lines. Percentages are computed on the settles and live prints in section 1.

WHAT KEITH ACTUALLY SAID

- **"we are not long semiconductors in the macro book."** — Keith McCullough, The Macro Show, Fri 28 Aug 10:25 ET / 22:25 GMT+8.
- **"Tesla we're still short."** — Keith McCullough, same session.
- Attributed summary, not quoted: McCullough identified **7,788** as the S&P's first lower high and called it the most important number of the morning, arguing consolidation is the likelier reading given the Quad setup but that the probability of a larger reversal has risen. He said hedge funds had been long semis and short software through June and that the pairing has reversed against them. He noted Nvidia produced what he described as the largest single-stock one-day contribution to the index on record, roughly 33% of a +0.7% S&P move, and that high-beta momentum still fell that day. He said he bought the recent silver pullback rather than chasing the top of the range, got long the Canadian dollar and finally bought Spain, and expects the Fed to cut four to eight times next year.
- From the Early Look, R. Patrick Kent, Fri 28 Aug 19:40 GMT+8: **"I am not an AI skeptic. I am an AI claim skeptic."** He flagged Nvidia's disclosed **\$105bn** guarantee behind OpenAI's lease obligations against roughly **\$800bn** of similar arrangements across the AI supply chain identified by the Bank for International Settlements, and wrote that such structures work in Quad 1 and become consequential in Quad 3 or Quad 4.

The Macro Show summary notes carry Hedgeye's own banner that the summary has been enhanced by AI and may contain errors. The two quoted lines are reproduced as they appear in that summary; everything else from that session is reported outside quotation marks as attributed summary rather than verbatim speech. The Early Look quote is from the note's own published text.

5 Mag7 scoreboard

NAME	LAST	DAY	CAP	READ
Amazon	266.43	▲ 3.97%	\$2.87T	Best of the seven by a wide margin. Added \$110bn in a session. 7.2% below its 52-week high.
Alphabet	346.59	▲ 1.74%	\$4.22T	Added \$72bn. Still 15.2% below its 52-week high of 408.61 — the largest drawdown among the five gainers.
Microsoft	513.53	▲ 1.68%	\$3.81T	Added \$63bn. The direct beneficiary of Hedgeye's software-over-semis rotation.
Apple	319.70	▲ 1.63%	\$4.67T	Added \$75bn. Closed near the session high of 322.37.
Meta	578.02	▲ 1.21%	\$1.47T	Added \$18bn but remains 26.9% below its 52-week high of 790.80 — the deepest drawdown in the group.
Tesla	348.75	▼ 1.71%	\$1.38T	Lost \$24bn. 30.1% below its 52-week high. Hedgeye remains short.
Nvidia	217.55	▼ 4.58%	\$5.24T	Lost \$251bn in one session , three days after beating on revenue and guiding above consensus. Still the largest company on earth. 8.0% below its 52-week high.

The seven together are worth **\$23.66tn** and were **up 0.346%** on a capitalisation-weighted basis while the S&P fell 0.25%. Nvidia's \$251bn loss was more than offset by \$337bn of gains across the other six. Capitalisations are TradingView's market_cap_basic field, captured at 06:07:14 GMT+8 and therefore struck on Friday's settles.

6 Positioning & options

- **Positive dealer gamma is the mechanical explanation for a 14.42 VIX on a 12.6 bp front-end day.** Dealers long gamma sell strength and buy weakness, compressing realised amplitude in both directions. It explains Friday's calm; it does not survive a gap.
- **The crowded pair unwound further.** Hedge funds were reported by Hedgeye to have been long semiconductors and short software through June. Friday extended the reversal: SOX −3.47%, IGV-proxy software strength, XLK −1.55% against XLC +1.42%.
- **The hedge is cheap and the calendar is not.** VIX 1.1% above its band floor with payrolls on Friday 4 September and an FOMC on 15–16 September is an unusually favourable ratio of cost to event risk. That is an observation about pricing, not a recommendation.
- **Metals positioning looks like it was long and levered.** A 3–4.4% single-day drop in gold and silver against a stable geopolitical backdrop is characteristic of forced liquidation rather than a change of view.
- **Small-cap positioning has no cushion left.** The Russell closed on its low and on its risk-range floor simultaneously. There is no room between the tape and the level at which the signal changes.
- **Month-end is today.** 31 August is the final trading session of the month; rebalancing flows into the close are mechanical and will not tell you anything about conviction.

7 Sector rotation — leaders & laggards

SECTOR	LAST	DAY	SECTOR	LAST	DAY
Communication svcs (XLC)	112.99	▲ 1.42%	Materials (XLB)	53.18	▼ 0.09%
Consumer discr. (XLY)	117.21	▲ 1.15%	Health care (XLV)	171.16	▼ 0.25%
Energy (XLE)	62.68	▲ 0.63%	Real estate (XLRE)	44.48	▼ 0.40%
Staples (XLP)	85.45	▲ 0.44%	Industrials (XLI)	177.14	▼ 0.93%
Financials (XLF)	58.10	▲ 0.38%	Utilities (XLU)	42.73	▼ 1.04%
			Technology (XLK)	185.69	▼ 1.55%

- **Leaders:** communication services, consumer discretionary, energy. Five of eleven sectors closed green on a down day for the index — the internal was better than the headline.
- **Laggards:** technology, utilities, industrials. The **2.97 point spread** between XLC and XLK is the whole story of the session in one number.
- **Utilities down 1.04% is the rate tell.** The bond proxy sold off with the front end; XLRE −0.40% confirms it. Hedgeye has been short XLU since 12 August.
- **Financials rose 0.38% and closed at a 52-week high of 58.41 intraday.** Higher-for-longer helps net interest margin, and the market priced it immediately.
- **Energy rose 0.63% with crude flat** — the equity is pricing supply scarcity that the futures curve is not.

8 Forward — futures & the week ahead

Globex reopened at **06:00 GMT+8**, seven minutes before capture. At 06:07:14 TradingView had not yet rolled the futures session — ES carried 1,456,479 contracts of Friday volume and a 70.75-point Friday range — so every

futures row in section 1 is Friday's settle with a handful of reopening prints on top, not a new session. The Friday-settle-to-reopen gap that normally makes a Monday edition useful **could not be measured** at this hour. Spot FX reopened at 05:00 and has roughly one hour of trade; the euro moved 6.6 pips, sterling 10, the dollar index 2.4 basis points. Those are not moves. Bitcoin and ether are the only instruments in this document with a full weekend of genuine price discovery behind them, and both are modestly higher: BTC **+0.57%** to 78,676 in a 77,970–79,390 range, ETH **+1.01%** to 2,481.94. Crypto is not corroborating a risk-off weekend, which is mildly constructive and very thinly evidenced.

DAY (GMT+8)	KEY EVENTS
Mon 31 Aug	China August NBS manufacturing and non-manufacturing PMIs, 09:30. US month-end — final session of August, mechanical rebalancing into the close. Monday evening's Hedgeye Early Look (≈19:40) supersedes the risk ranges in section 4.
Tue 1 Sep	September Quad 1 begins on Hedgeye's model. Caixin China manufacturing PMI. Euro area flash CPI. US ISM Manufacturing , 22:00.
Wed 2 Sep	US JOLTS job openings, 22:00. Factory orders. First full session of the new month and the new Quad.
Thu 3 Sep	ADP private payrolls, 20:15. Weekly jobless claims, 20:30. ISM Services , 22:00 — the survey that has been carrying the inflation signal.
Fri 4 Sep	US August employment report, 20:30. The last major labour print before the FOMC and the single event most likely to settle or break the September hike pricing.
Ahead	FOMC 15-16 September. US Labor Day falls Monday 7 September, so this is a full five-session week.

*Release times follow the standard BLS, ISM and Census schedules converted to GMT+8. Consensus estimates for this week's releases were **not** confirmed against a primary calendar this run and are therefore omitted rather than printed unverified — see KNOWN GAPS.*

9 Corporate news

- **Nvidia fell 4.58% on Friday, three days after a clean beat.** Q2 FY27 revenue was **\$96.2bn**, up 106% year on year and 18% sequentially, against consensus it exceeded by about 4.5%; data centre revenue **\$89bn** versus roughly \$86.3bn expected; GAAP and non-GAAP gross margin both 75.0%. Guidance for the current quarter of **\$108bn ±2%** beat the roughly \$104.2bn expected. The stock is now **8.0% below** its 52-week high and shed \$251bn of value in a single session. A beat that good producing a drawdown that fast is the clearest signal in the tape that the marginal buyer has left semis.
- **The \$105bn Nvidia-OpenAI figure is a guarantee, not an investment.** The SEC disclosure caps Nvidia's exposure on OpenAI's Ohio data-centre lease and power obligations at \$105bn, triggered only by OpenAI default or insolvency. Earlier reporting had put an unconditional figure near \$250bn. The correction matters: a contingent backstop and an equity cheque are different instruments with different accounting.
- **Applied Materials fell 4.29% to 461.67**, and is **37.6% below** its 52-week high of 739.67. Semiconductor capital equipment is taking more damage than the chipmakers themselves.
- **Workday rose 5.76% to 204.72** on results — the largest single-name gain in the capture set and a clean illustration of the software-over-semiconductors rotation Hedgeye has been running since May.
- **SanDisk closed flat at 1,484.98 but broke its Hedgeye TREND line.** It sits **36.9% below** a 52-week high of 2,354.39 after a move from 50.07 at the low — a memory name that ran thirty-fold and is now rolling over. Hedgeye is short.
- **Intel fell 2.85% to 89.47**, now 37.1% below its 52-week high, after an intraday high of 93.70. Micron fell 0.27%, Western Digital 0.55%, Cisco 1.98%.
- **Tapestry rose 1.83%** and added a further 1.20% after hours to 127.00 — one of the few meaningful post-close moves in the capture.

10 Macro data

- **July PCE, released Wednesday 26 August — headline 3.7% year on year against consensus 3.6%, a 0.1 point upside miss. Core 3.3%, exactly in line.** Both rose 0.2% on the month. The distinction is the story: headline is being pushed by energy, and core has simply stopped falling.
- **Core PCE at 3.3% is 130 basis points above target** with the Fed's policy rate implied by a 3.82% 13-week bill. That is not a restrictive real stance by the standard the Fed itself has used, which is precisely the argument a hawkish chair makes.
- **Warsh's framing, Jackson Hole, Friday 28 August:** he described underlying activity as solid on robust business investment, steady consumer spending and labour-market conditions consistent with full employment, said he was impressed with the economy's strength, and said the summer's better-than-expected inflation readings did not persuade him that underlying trends had meaningfully improved. He declined to give forward guidance and stopped short of signalling a September increase.

- **Hedgeye's macro read runs the other way.** Q3 GDP tracking roughly 3.5–4%, 485 S&P constituents reporting about 52% earnings acceleration, and an expectation that growth slows and inflation falls sharply from here — hence four to eight cuts next year. Both views can be right in sequence; they cannot both be right in September.
- **The energy pass-through has not finished.** Brent at \$88.10 is roughly 24% above pre-war levels, RBOB rose 2.00% on Friday, and wheat rose 3.06% to a whisker off a 52-week high. Headline inflation has an active tailwind into the autumn prints.
- **What settles it is Friday's payrolls**, 4 September at 20:30 GMT+8. A hot labour print against "full employment" language makes September a hike; a soft one hands the argument back to Hedgeye.

11 Geopolitics

- **▼ The Strait of Hormuz remains closed and negotiations remain deadlocked.** The US–Israel war with Iran began in late February. Reuters has reported that OPEC+'s share of global oil output has fallen from above 48% pre-war to roughly 40% in July. Brent is about 24% above pre-war levels.
- **◆ The EIA does not expect Middle East production to return near pre-conflict levels until early 2027**, and projects Brent to average \$87 for 2026 — close to where it settled on Friday. The market is pricing the EIA's base case, neither escalation nor resolution.
- **◆ Chinese crude imports since the war began are reported to be roughly 400 million barrels below the comparable year-earlier period.** Attributed to Reuters; it makes Chinese demand the swing balancing force in a supply-constrained market and is a claim worth treating as an estimate rather than a settled figure.
- **▲ Reported diplomatic movement, uncorroborated by wire services in this run:** the United States is said to have scrapped September military drills with South Korea and removed Syria from its list of state sponsors of terrorism, with discussion of the SDF integrating into Syrian state forces. These were carried by secondary aggregators, not by Reuters or AP directly, and should be treated as unconfirmed.
- **◆ QatarEnergy is reported to have cancelled gas deliveries to Italy's Edison until early November** over the Iran conflict — a European gas-supply consequence that has not yet shown up in a US natural gas contract sitting at \$2.888.
- **▼ The KOSPI is 27.7% below its 52-week high** and fell 1.79% on Friday. Hedgeye's deck describes it as being in "Crash Mode". Korea is the most direct equity expression of the semiconductor unwind and, separately, of any change in US–Korea security posture.

12 Overnight setup — what Asia opens into

INSTRUMENT	LEVEL	CHANGE	VOLUME	STATE AT 06:07 GMT+8
ES (E-mini S&P)	7,722.00	▼ 0.27%	1,456,479	Friday session; reopen not rolled
NQ (E-mini Nasdaq)	29,491.75	▼ 0.69%	572,237	Friday session
YM (E-mini Dow)	53,584	▼ 0.07%	56,319	Friday session
RTY (E-mini Russell)	2,977.50	▼ 1.38%	158,225	Friday session
USD/JPY	160.154	◆ 0.05%	920	Live, ~1 hour, 15-pip range
USD/KRW	1,378.39	▼ 0.24%	58,158	Friday session — Seoul spot shut
USD/TWD	31.656	◆ 0.04%	32,478	Friday session — Taipei spot shut
USD/CNH	6.72889	◆ 0.02%	239	Live, ~1 hour, 2.3-pip range
EUR/USD	1.15809	◆ 0.02%	783	Live, ~1 hour, 6.6-pip range
Gold (spot)	4,452.81	◆ 0.04%	—	Live, ~1 hour, 0.70% range
Silver (spot)	66.1675	◆ 0.30%	—	Live, ~1 hour, on band floor
Copper (spot)	6.5054	◆ 0.01%	179	Live, ~1 hour, very thin
WTI (CL1!)	83.40	▼ 0.16%	149,614	Friday session
Brent (BZ1!)	88.10	▼ 0.47%	25,962	Friday session
Bitcoin	78,675.70	▲ 0.57%	—	Genuinely live, full weekend
Ether	2,481.94	▲ 1.01%	—	Genuinely live, full weekend

Previous Asian closes, all Friday 28 August and all roughly 50 hours old: Nikkei 225 **66,405.34** (+0.41%), Hang Seng **25,584.80** (+0.08%), KOSPI **6,788.89** (−1.79%), Shanghai Composite **3,952.18** (−0.11%), ASX 200 **9,092.30** (+0.60%), Sensex **77,264.51** (+0.43%). These are marked as previous closes, not live levels.

- **The US tape hands Asia a semiconductor problem, not an equity problem.** SOX −3.47% with the Dow flat is the handover. Korea and Taiwan are the direct recipients: the KOSPI closed Friday down 1.79% and is 27.7% below its high; TSMC's index is the other side of the same trade.

- **Korea is set up to reprice twice.** It closed Friday before the full weight of the Warsh repricing, and it fell 1.79% anyway. Add a 12.6 bp move in the US front end and a won that firmed 0.24% on Friday, and the KOSPI has the widest gap between what it knows and what has happened of any market opening today.
- **Japan opens into 160.15 on USD/JPY** with the Nikkei sitting dead centre of its 64,101–68,722 Hedgeye band. A hawkish Fed is yen-negative, and 160 is the level at which Japanese official rhetoric historically sharpens. That is the tension in the Tokyo open.
- **China gets its own data first.** August NBS PMIs at 09:30 land before the rest of the region has settled. The Shanghai Composite sits at 75% of its Hedgeye band with a neutral TREND signal — upper range, no signal conviction.
- **The single instrument most likely to move today is the KOSPI**, because it carries the semiconductor unwind, the Fed repricing and any US–Korea security headline simultaneously, and because it starts 27.7% below its high with a Hedgeye short against it.

13 AI watch

- **The financing structure is now the story, not the demand.** Nvidia's disclosed \$105bn guarantee behind OpenAI's Ohio lease and power obligations sits inside roughly **\$800bn** of comparable arrangements across the AI supply chain identified by the Bank for International Settlements. Hedgeye's Early Look made the point plainly: these structures are unremarkable while growth accelerates and become consequential when it does not.
- **Nvidia is reported to be discussing an equity investment in Perplexity at a valuation above \$30bn**, with Perplexity's annualised revenue said to have passed \$750m from under \$250m at the start of 2026. Reported, not confirmed by the companies.
- **SoftBank is reported to be planning a record ¥1tn (about \$6.3bn) retail bond** to repay the bridge loan behind its OpenAI stake and fund further AI deals. Retail funding of a bridge loan on a private AI stake is a financing structure worth watching regardless of what one thinks of the underlying asset.
- **AWS will shut down Mechanical Turk on 30 September 2026**, ending the 2005-era human task marketplace, displaced by AI-native data-labelling firms. A small item that dates the transition precisely.
- **The claim inflation is measurable.** Anthropic's reported \$30tn total addressable market — the economic value of all cognitive labour — followed SpaceX's \$28.5tn claim in May. Whatever the merits, a TAM chosen to make a valuation look manageable is a denominator, not an analysis.
- **And the tape disagrees with the story.** Nvidia beat, guided above consensus, and fell 4.58%. Applied Materials is 37.6% below its high, SanDisk 36.9%, Intel 37.1%. The AI trade has narrowed from an industry to a handful of software names.

14 Beyond the markets

- **Wheat closed within 0.8% of a 52-week high** after a 3.06% session. Food inflation does not appear in core PCE and does appear in political outcomes.
- **The MOVE index at 70.97 is nearer its 52-week low of 55.77 than its high of 115.02** on the day the 2-year moved 12.6 basis points. Bond markets repriced the level of policy without repricing the uncertainty around it — an unusual combination that usually resolves in one direction.
- **Ether is 47.9% below its 52-week high and bitcoin 37.7%.** A drawdown of that size in an asset class widely described as an inflation hedge, during an inflation scare, is a fact that has gone largely unremarked.
- **Copper spot is 12.7% into a band whose TREND is bullish while COMEX futures trade at a 2.36% premium to it.** Exchange-versus-spot dislocations of that size in industrial metals usually reflect warehousing and tariff frictions rather than demand.
- **Meta is 26.9% below its 52-week high** while being counted among the winners of Friday's session. The Magnificent Seven is no longer a cohort that moves together — the spread between Amazon's +3.97% and Nvidia's −4.58% on a single day was 8.55 points.
- **Financials touched a 52-week high intraday on the day the market priced a rate hike.** Somebody is treating higher-for-longer as a margin story rather than a recession risk.

15 Appendix — stock cards

NVDA · NVIDIA

217.55 ▼ 4.58%

Cap \$5.24T · band n/a · 8.0% below 52w high 236.54 · next: FY27 Q3 report late Nov

Beat on revenue at \$96.2bn (+106% y/y) and guided to \$108bn ±2% against ~\$104.2bn expected — then lost **\$251bn** of value in one session. Hedgeye has it bullish TRADE and TREND as a single name while explicitly not

AMZN · AMAZON

266.43 ▲ 3.97%

Cap \$2.87T · 7.2% below 52w high 287.20 · added \$110bn on the day

The best of the Magnificent Seven and the clearest expression of money rotating out of semis and into large-cap software and platforms. Closed near the session high of

long semiconductors in the macro book. Both can be true; the tape is siding with the macro book.

267.56 having opened at 258.32 — a 3.6% intraday advance with no earnings catalyst on the day.

AMAT · APPLIED MATERIALS

461.67 ▼ 4.29%

Cap \$366bn · 37.6% below 52w high 739.67 · 52w low 154.47

Semi-cap is taking more damage than the chipmakers. A 37.6% drawdown against an S&P 1.34% from its high is the single widest divergence between a major industry and the index in this capture. Closed near the low of 460.51.

WDAY · WORKDAY

204.72 ▲ 5.76%

Cap \$49.3bn · 18.1% below 52w high 249.85 · post-close 204.25

Largest single-name gain in the capture set, on results. Opened at 190.68 and closed at 204.72. It is the textbook case for Hedgeye's software-over-semiconductors call, which has been in place since May and which Keith McCullough noted has reversed hard against hedge funds positioned the other way.

SNDK · SANDISK

1,484.98 ◆ 0.00%

Cap \$217bn · 36.9% below 52w high 2,354.39 · 52w low 50.07

Flat on the day but it broke its Hedgeye TREND line, which Keith McCullough called a bearish trend signal. A name that ran from 50 to 2,354 in a year and is now a third off the high. Hedgeye is short. Range on Friday was 1,435.61–1,517.75 — 5.5% of intraday swing on a flat close.

INTC · INTEL

89.47 ▼ 2.85%

Cap \$470bn · 37.1% below 52w high 142.35 · 52w low 23.68

Traded as high as 93.70 and closed at 89.47, near the low of 89.05. Volume of 86.2m was the heaviest of any single name in the capture bar Nvidia. Fell a further 0.25% after the close. The 23.68 low a year ago frames how violent the round trip has been.

TSLA · TESLA

348.75 ▼ 1.71%

Cap \$1.38T · 30.1% below 52w high 498.83 · post-close 348.12

Hedgeye remains short — "Tesla we're still short" on Friday's Macro Show. Friday's Early Look separately noted the company has told certified installers that solar roof tiles are discontinued on economic grounds. Closed at 348.75 from an intraday high of 358.80.

META · META PLATFORMS

578.02 ▲ 1.21%

Cap \$1.47T · 26.9% below 52w high 790.80 · 52w low 520.26

Counted among Friday's winners while carrying the deepest drawdown of the five that rose. Hedgeye holds a bearish position in the FBY covered-call product against it. Traded 571.00–589.19 and closed nearer the low end of that range.

16 About this edition

- **Covers** — the US cash session of Friday 28 August as settled, the weekend news flow, and the Globex and spot FX reopen to 06:07 GMT+8 Monday 31 August. Asian cash markets have not opened.
- **Captured** — a single 2.8-second window, **06:07:14–06:07:16 GMT+8**, 96 of 96 instruments from TradingView. Yahoo Finance was rate-limited and returned 0 of 62; the machine capture is therefore **TradingView-single-sourced**, and the cross-check was recovered by hand from wire copy. Divergences and manual reconciliations are documented in section 18.
- **Off-schedule** — the run fired at 06:07, seven minutes after Globex reopened at 06:00. TradingView had not rolled the futures session, so every futures row is Friday's settle rather than a live overnight print, and **the Friday-settle-to-reopen gap could not be measured**. Spot FX and spot metals had roughly one hour of trade; their change figures are noise and are marked amber.
- **Settled versus live** — cash equities, Treasury yields, sector ETFs, single names, futures, USD/KRW and USD/TWD are all **Friday settles, 49–50 hours old**. DXY, EUR/USD, USD/JPY, GBP/USD, AUD/USD, USD/CNH and spot gold, silver and copper are **live but roughly one hour old**. Bitcoin and ether are the only fully live rows.
- **Hedgeye edition** — FULL, logged-in access. The live risk-range set is "**The Golden Age of Snake Oil #Quad1**" by R. Patrick Kent, Friday 28 August 19:40 GMT+8; Hedgeye does not publish at weekends, so this is a genuine carry-forward and not a stale-band fallback. Monday evening's Early Look supersedes it at roughly 19:40 tonight. Also read: The Macro Show summary notes (Fri, 22:25 GMT+8), ETF Pro Plus weekly (Sun 30 Aug 16:24 ET = **04:24 GMT+8 today**, the freshest Hedgeye item in this brief), From The Desk (Fri, 05:00 GMT+8 Saturday) and Signal Strength Stocks (Fri).
- **Quad path** — **CHANGED, and it changes tomorrow. August Quad 3 → September Quad 1**, stated explicitly by Keith McCullough on The Macro Show. Today is the final session of August; the transition takes effect on 1 September.
- **Not available** — the previous session's Early Look, so risk-range *band movement* is unknown; the Macro Week Summary Notes, which Hedgeye replaced this week with a Macro Q&A and which would ordinarily carry the US Monthly Quad Forecast; MOMO Tracker and Crypto Quant; confirmed consensus estimates for this week's US data.

Prices. TradingView bulk scanner, one concurrent query at 06:07:14–06:07:16 GMT+8, 96 instruments, covering cash indices, futures, Treasury yields, spot and futures metals, FX, crypto, sector SPDRs and single names. Yahoo

Finance was attempted concurrently and aborted on a rate-limit circuit breaker at 06:07:16. Manual cross-checks were taken from the Associated Press "How major US stock indexes fared Friday 8/28/2026" wire, carried by The Washington Post and Yahoo Finance, and from CNBC and Schwab market wraps for Treasury settles.

Hedgeye. Logged-in feed at app.hedgeye.com, read 06:08-06:20 GMT+8: Early Look of 28 August; The Macro Show summary notes of 28 August; ETF Pro Plus weekly report of 30 August; From The Desk of 28 August. Risk ranges, TREND signals, the Quad path and all attributed commentary come from those notes.

Macro and policy. Chairman Warsh's keynote remarks at the 2026 Jackson Hole Economic Policy Symposium, published by the Federal Reserve Board, with reaction and rate-probability coverage from CNBC, NPR, The Washington Post and PBS. July PCE from Bureau of Economic Analysis data as reported by CNBC and Yahoo Finance. Rate-probability figures are CME FedWatch as cited by those outlets.

Session narrative and single stocks. CNBC, Yahoo Finance market live blogs, Kiplinger and 24/7 Wall St for the Friday session. Nvidia figures from the company's own Q2 FY27 results release and investor materials, with the \$105bn guarantee from the SEC disclosure as reported by Reuters, Fortune and TechTimes.

Commodities, geopolitics and AI. IEA Oil Market Report for August 2026 and EIA projections; Al Jazeera and CNBC on the Strait of Hormuz standoff; Reuters as cited for OPEC+ output share and Chinese import volumes. AI items from AI Weekly aggregation, individually flagged where unconfirmed.

18 Data-confidence

CROSS-CHECKS PASSED

- **The three headline index closes reconcile exactly against an independent wire.** The AP "How major US stock indexes fared" report for 28 August gives S&P 500 **-19.23 to 7,711.76**, Dow **-9.45 to 53,559.99**, Nasdaq **-138.93 to 26,402.42**. The TradingView capture returns 7,711.76 / -19.23, 53,559.99 / -9.45 and 26,402.42 / -138.93. Three of three match to the cent and to the point change.
- **Cash index arithmetic is self-consistent.** S&P: $7,711.76 + 19.23 = 7,730.99$ prior close, and $-19.23 / 7,730.99 = -0.2488\%$, matching the reported -0.249% . Nasdaq: $26,402.42 + 138.93 = 26,541.35$, and $-138.93 / 26,541.35 = -0.523\%$, matching. Russell: $2,972.37 + 41.97 = 3,014.34$ prior close against an open of 3,014.15 — a 0.19-point gap-down open, consistent.
- **Treasury settles reconcile to within 1 basis point against independent wire copy.** Vendor market wraps report the 2-year at 4.35% (+0.12pp) and the 10-year at 4.72%; the capture returns **4.360%** (+12.6 bp) and **4.730%** (+5.4 bp). The 1 bp gap is a rounding and cut-off difference, not a conflict. The 2-year was captured directly from TVC:US02Y and is **not** inferred from a Hedgeye spread — a defect flagged in an earlier edition and now closed.
- **Futures-to-cash basis is normal on all four equity contracts, confirming the settles are settles:** ES - SPX = **+10.24**, YM - DJI = **+24.01**, RTY - RUT = **+5.13**. All are ordinary carry premia for the tenor. A dislocated basis would have exposed a mislabelled row; none appeared.
- **Spot-versus-futures bases in metals were measured explicitly rather than assumed:** COMEX gold 4,529.90 against spot 4,452.81 is **+1.73%**; silver 67.786 against 66.1675 is **+2.45%**; copper 6.659 against 6.5054 is **+2.36%**. Every Hedgeye band in section 4 is measured on the series Hedgeye names — spot for the three metals, continuous contract for crude and natural gas. Had gold been measured on futures it would have shown 35.9% of band against a true **14.8%**.
- **The Warsh narrative reconciles to the tape independently.** A hawkish repricing predicts front-end yields up more than long, precious metals down, small caps down hardest, financials up. All four occurred: 2-year +12.6 bp against 30-year +1.8 bp, GLD -3.24% and SLV -4.38%, Russell -1.39% closing on its low, XLF +0.38% with a 52-week intraday high. The story and the numbers were derived separately and agree.
- **Reconciliation counts from the capture script:** 0 matched within 5 basis points, 0 minor, 0 divergent, **57 single-sourced**. There are **no divergent rows to resolve because no second machine source ran** — that is an absence of comparison, not a clean reconciliation, and it should not be read as one.

KNOWN CONFLICTS AND WEAK MARKS

- **September rate-hike probability is genuinely disputed across sources.** One outlet puts it at **57%** post-speech, another describes it as "basically a coin flip" up from about one-third, a third reports a move from roughly 35% to around 55%. All are described as CME FedWatch. This brief uses the **50-57%** range and does not pick a point estimate; the direction is robust, the decimal is not.
- **Every amber-marked change figure is measured over roughly one hour of thin trade and carries no information.** DXY moved 2.4 basis points across its whole session range, EUR/USD 6.6 pips, USD/CNH 2.3 pips, copper spot traded 179 lots. AUD/USD returned a change of exactly 0.000, which is an artefact of the window, not a stable price. The *levels* are real; the *changes* are not.
- **USD/KRW and USD/TWD are labelled as Friday's session on volume and range evidence, not on a vendor timestamp.** Won volume of 58,158 and an 11-won range, and TWD volume of 32,478 with an 18-pip range, are inconsistent with an hour of trade while Seoul and Taipei spot are shut. The inference is strong but it is an inference.

- **Nvidia's one-day capitalisation loss of \$251bn is computed from TradingView's market_cap_basic against the day's percentage change**, so it embeds that vendor's share-count assumption. The order of magnitude is solid; the last ten billion is not.
- **Weekend geopolitical items are the weakest marks in the document.** The reported scrapping of September US-South Korea drills, Syria's removal from the state-sponsors list and the QatarEnergy-Edison cancellation came through secondary aggregators rather than Reuters or AP directly and are labelled unconfirmed in section 11. The OPEC+ 40% output-share figure and the 400-million-barrel Chinese import shortfall are attributed to Reuters at second hand.
- **The AI items in section 13 are dated to a weekly aggregation window rather than to a specific day.** The Nvidia-Perplexity talks, the SoftBank ¥1tn bond and the Mechanical Turk shutdown are reported as such and were not confirmed against company statements this run.
- **The two quoted McCullough lines come from an AI-enhanced summary** carrying Hedgeye's own error caveat. They are reproduced verbatim as that summary presents them, but they have not been checked against the audio, and everything else from that session is deliberately reported outside quotation marks.

KNOWN GAPS

- **Risk-range band movement versus the prior session is UNKNOWN, not unchanged.** The Early Look category page does not paginate — pages 1, 2 and 3 all return the 28 August note — and no alternate route to the 27 August note succeeded. Floor moves, ceiling moves and band-width changes are therefore absent from section 4, and their absence must not be read as stability.
- **The Macro Week Summary Notes were not published this week.** Hedgeye replaced Friday's edition with a Macro Pro Q&A and stated the usual notes return next Friday. That publication ordinarily carries the US Monthly Quad Forecast and its explicit path notation. The **3 → 1** path in this brief comes from Keith McCullough's spoken remarks on The Macro Show, not from the forecast document; no printed path notation was seen this run.
- **MOMO Tracker and Crypto Quant were not read.** These are the specific publications that would ordinarily carry a position change, and **absence of a Hedgeye position change in this brief is not evidence that there was none.**
- **Yahoo Finance returned nothing.** The circuit breaker tripped after five consecutive HTTP 429s at 06:07:16, costing 2.8 seconds rather than eight minutes. No multi-day daily bars were available, so week-on-week context in this edition is derived from 52-week high and low fields rather than from bar history.
- **Consensus estimates for this week's US releases are absent.** The figures returned by search were generic and inconsistent with the current cycle, so they were omitted rather than printed. Actual-versus-consensus is given for July PCE, which is confirmed.
- **No Asian cash market has opened**, and no live Asian index level exists anywhere in this document. Tokyo and Seoul open at 08:00-08:30 GMT+8, Hong Kong at 09:30, India at 12:15.
- **Weekend news flow was thin.** Searches for 29-30 August returned largely aggregator and newsletter material rather than wire coverage, so the Monday-edition weekend section is lighter than it should be and leans on Friday's event.

TIMING & UNVERIFIED

- **Capture window: 06:07:14-06:07:16 GMT+8 on Monday 31 August 2026 — 2.8 seconds.** No top-up pass was required and no row in this document was captured outside that window.
- **The stalest rows in this brief are 50 hours old.** US cash equities, sector ETFs and single names settled at 16:00 ET Friday, which is 04:00 GMT+8 Saturday — **50 hours 7 minutes** before capture. Treasury cash closed an hour later: **49 hours 7 minutes**. Any of it can be wrong by Monday's US open.
- **Futures rows are Friday settles carrying about 7 minutes of reopening trade.** Globex reopened at 06:00 GMT+8; TradingView had not rolled the session at 06:07:14, confirmed by Friday-scale volume and Friday-width ranges on all four equity contracts and on crude. Treat them as settles.
- **Spot FX and spot metals carry roughly 1 hour of trade**, having reopened at about 05:00 GMT+8. Bitcoin and ether are the only continuously traded instruments here.
- **The Hedgeye risk ranges will be superseded tonight.** Monday's Early Look publishes at approximately 19:40 GMT+8 and replaces every band in section 4. The current set was published at 19:40 GMT+8 on Friday — **before** Warsh spoke at Jackson Hole — so it does not incorporate the largest macro event of the week.
- **Everything in this document was true at 06:07:14 GMT+8 and some of it will not be true at the US open. Verify live prices before acting on any level printed here.**
