

DAILY NEED TO KNOW

Sunday, 9 August 2026 · Pre-market brief for Anne Wong

Covering the Friday 7 August 2026 US session as finally settled — twelve marks were revised after Saturday's edition went out, and two of them changed sign — plus the weekend. All times GMT+8 (HKT).

Edition: FULL — Hedgeye logged-in edition. WEEKEND EDITION, DAY 2. Cash and futures are shut. CME Globex reopens 06:00 GMT+8 Monday; Asian cash markets Monday 10 August. The only live prices in this brief are crypto, captured 07:19 GMT+8 Sunday — everything else is a final Friday close or settle. No new Hedgeye research has published since Friday's set, so the sixteen Risk Ranges in section 4 still stand. What changed over the weekend was not the tape but the record of it: the entire futures and commodity complex re-settled, and crude's Friday direction inverted.

1 Market snapshot — Friday 7 August, final settles

ASSET	LAST	CHANGE	NOTE
S&P 500	7,757.64	▲ +47.68 / +0.62%	Confirmed to the tick. Record close; ranged 7,719.19–7,763.08. Week +3.58%, the strongest since April
Nasdaq Composite	26,690.62	▲ +342.26 / +1.30%	Confirmed. Week +5.19% — best of the four majors, and not computed in yesterday's edition. Still 1.84% under the June record
Dow Jones	54,036.93	▲ +151.83 / +0.28%	Confirmed. Week +2.96%. Still 312.19 below Tuesday's record close
Russell 2000	3,034.49	▲ +32.95 / +1.10%	Confirmed. Week +3.52%. Reclaimed the 3,000 handle it lost intraday Thursday
Philadelphia SOX	12,356.79	▲ +308.09 / +2.56%	Confirmed. Best of every major on Friday. The complex Hedgeye is short
S&P futures (ES)	7,779.75	▲ +45.00 / +0.58%	REVISED from 7,777.25 / +0.55%. Basis to cash +22.11, not +19.61. See section 3
Nasdaq-100 fut (NQ)	29,834.75	▲ +346.50 / +1.18%	REVISED from 29,839.50 / +1.19%. 523,493 lots
Dow futures (YM)	54,152.00	▲ +139.00 / +0.26%	REVISED from 54,132 / +0.22% — the largest of the four equity revisions, 20 points
Russell futures (RTY)	3,041.60	▲ +32.50 / +1.08%	REVISED from 3,040.00 / +1.03%. Basis +7.11 against the +5.51 published
US 10Y yield	4.660%	▼ -1.0 bp	Confirmed. Ranged 4.60–4.67; week -8.5bp. Touched within a basis point of Hedgeye's 4.59 floor and gave back six of the seven
US 30Y yield	5.21%	◆ ~flat	Confirmed. Week -7bp. Did not participate in the payroll rally at all
US 5Y yield	4.362%	▼ -2.7 bp	Confirmed. Week -9.8bp — the belly led the whole curve lower
US 13-week bill	3.710%	▼ -2.2 bp	Confirmed. Broke seven sessions of 3.72–3.74 to the downside
WTI crude (Sep)	\$78.18	▲ +0.89 / +1.15%	SIGN FLIP. Published yesterday as -0.21 / -0.27%. Crude ROSE on Friday. Week -7.66%. See sections 3 and 11
Brent crude (front)	\$83.55	▲ +1.06 / +1.29%	SIGN FLIP. Published yesterday as -0.22 / -0.27%. Week -7.29%
Nat gas (Sep)	\$2.6620	▲ +0.0220 / +0.83%	REVISED from 2.6710 / +1.17%. Mid-band. Week -3.09%
RBOB gasoline	\$2.9853	▲ +0.0468 / +1.59%	UNUSABLE. The 2.69–2.76 day range does not contain the price — a contract-roll artefact for the second time in three sessions
Gold (Dec)	\$4,399.70	▲ +100.10 / +2.33%	REVISED from 4,401.30 / +2.37%. Week +7.13%. Hedgeye flipped the signal BULLISH — see section 4
Silver (Sep)	\$63.499	▲ +1.893 / +3.07%	REVISED from 63.80 / +3.56% — the largest percentage revision on the page. Week +9.89%

ASSET	LAST	CHANGE	NOTE
Copper (Sep)	\$6.591	▼ -0.118 / -1.76%	REVISED from 6.585 / -1.85%. Printed a 52-week high of 6.77 and closed near the low. Week +1.94%
US Dollar (DXY)	99.60	◆ delta disputed	Level confirmed at 99.60; the change field flipped from -0.33% to +0.07% overnight. See Data-confidence. Week -0.20%
USD/JPY	157.745	▼ -0.704 / -0.44%	Confirmed. Session low 156.65. But the yen is still WEAKER on the week: 157.40 → 157.745
USD/KRW	1,407.45	▼ -15.24 / -1.07%	Confirmed. The won's biggest move of the week, on the Kospi's sixth consecutive decline
VIX	14.90	▼ -0.25 / -1.65%	Confirmed. Week -6.82%. Sits 0.16 off the floor of a 14.74-17.88 band
Bitcoin (LIVE)	\$64,906.56	▲ +14.96 / +0.02% (24h)	07:19 GMT+8 Sunday — the only live mark in this brief. ETH \$1,914.89 (+0.09%), SOL \$75.83 (+3.00%), XRP \$1.0373 (+1.67%), BNB \$600.00 (+1.29%)

Colour key: ▲ up ▼ down ◆ flat or disputed, coloured by raw price direction only — a falling yield and a falling VIX both read green here, and neither is necessarily a good thing. Rows marked REVISED or SIGN FLIP are Yahoo's settled Friday marks captured 07:10-07:20 GMT+8 Sunday; yesterday's edition used the marks available 07:10-07:35 GMT+8 Saturday. Every revised row reconciles off the identical Thursday base — ES 7,734.75+45.00=7,779.75; NQ 29,488.25+346.50=29,834.75; YM 54,013+139=54,152; RTY 3,009.10+32.50=3,041.60; WTI 77.29+0.89=78.18; Brent 82.49+1.06=83.55; gold 4,299.60+100.10=4,399.70; silver 61.606+1.893=63.499; copper 6.709-0.118=6.591; nat gas 2.640+0.022=2.662 — so this is a settlement revision across the whole complex, not a different contract. All five cash index closes, all four yields, the VIX, all twenty-one sector and reference ETFs, all fourteen single names and all twelve Asian and European index closes re-verified this morning and tie to yesterday's edition exactly. Weekly changes are computed against the 31 July closes published in the 2 August edition.

TL;DR

Nothing traded, and twelve numbers changed anyway — including the sign on crude. Yesterday this brief printed WTI settling \$77.08, down 0.27%, and built a paragraph around it: the market had been given the Hormuz headline on Thursday and the actual terms on Friday, and it paid up for the idea and nothing for the contents. That reading is wrong and is withdrawn. WTI settled \$78.18, up 1.15%. Brent settled \$83.55, up 1.29%. Crude rose on Friday. The equity tape is exactly where Saturday left it — S&P 7,757.64, Nasdaq 26,690.62, Kospi 6,258.77, every single name to the tick — but the entire futures and commodity complex re-settled overnight, and the energy row inverted.

The correction matters less than what it reveals, which is that the crude bid was never about the Oman terms. Iran's IRGC engaged what it called "hostile targets" near the Strait late Thursday, with explosions heard on Qeshm Island at around 21:40 local. Then, in the early hours of Saturday, a missile struck an ADNOC-affiliated tanker transiting Hormuz. The UAE called it "acts of piracy" by the Revolutionary Guard; Saudi Arabia called it a grave violation; Qatar demanded the strait reopen without conditions. Fifteen ADNOC vessels have now been attacked since late February, three of them this week, with one crew member killed and twenty injured. Crude was pricing attrition in the shipping lane, not the text of a draft agreement.

Iran hardened in public on Saturday, and it severed the deal from the reopening. The secretary of Iran's Supreme National Security Council set six conditions for reopening Hormuz — no further US threats, a permanent end to the war with Iran and its regional allies, an end to the naval blockade and withdrawal of forces, full compensation for war damage, all sanctions lifted, and the unconditional release of frozen assets. The IRGC spokesman then said the reopening is "completely independent" of the Iran-Oman talks. Meanwhile the Iranian foreign minister said the Oman deal is "very close," and Oman's foreign ministry — silent for four sessions, and flagged in yesterday's brief as the thing to watch — finally spoke, condemning "the repeated attacks on vessels transiting the Strait of Hormuz" and calling the negotiations "positive and constructive." Both things are true at once. Any Monday headline reading "Iran-Oman deal signed" is not, on Saturday's evidence, a reopening.

And the week, which is the frame the daily numbers keep obscuring, was a violent risk-on rotation out of energy and into everything else. Equities: S&P +3.58%, Nasdaq +5.19%, Russell +3.52%, Dow +2.96%. Metals: gold +7.13%, silver +9.89%. Energy: WTI -7.66%, Brent -7.29%, nat gas -3.09%. Rates: 5Y -9.8bp, 10Y -8.5bp, 30Y -7bp. Volatility: VIX -6.82%. Korea: -5.10%. Friday's crude bounce is a bounce inside a seven-and-a-half-percent weekly decline, and the Kospi's sixth consecutive fall is the one index that did not participate in any of it.

2 The big picture — what it means

- 1. A settlement revision that flips a sign is a different object from one that trims a decimal, and this brief has now had two in eight days.** On 2 August the same thing happened to copper, WTI and nat gas. The mechanism is that Saturday-morning captures read the last electronic print rather than the exchange's settled mark, and energy is where the gap is widest because the pit settle and the 17:00 EDT electronic close diverge most. The standing correction, applied from this edition forward: the

commodity rows in a Saturday brief are provisional and should be re-read on Sunday before anyone sizes off them. The equity rows have never once revised.

2. **Energy equities fell 1.13% on a day crude rose 1.15%, and that divergence is new information rather than an artefact.** XLE was the worst of the eleven sectors. On yesterday's marks the story was coherent — crude down a little, energy equities down more. On the corrected marks it is a 2.3-point gap in the wrong direction, on the same morning Hedgeye removed Energy (XLE) from the long side at 56.24–60.52, five minutes after Keith reiterated the position on air. Equity holders sold energy into a rising crude tape. That is either the market pricing the –7.66% week rather than the +1.15% day, or it is the market deciding that a Hormuz risk premium does not reach producer earnings. Both readings are bearish for the equities and neither is bearish for the barrel.
3. **The unemployment rate fell for the worst possible reason and almost nobody said so.** It went to 4.1% from 4.2% — not because people found work, but because 264,000 of them stopped looking. Participation dropped to 61.4%, the lowest in more than five years and, outside the Covid period, the lowest since the middle of 1976. Household employment fell 87,000 and the employment-to-population ratio slipped to 58.9%, its lowest since May 2014. A falling unemployment rate driven by a shrinking labour force is a different economic object from one driven by hiring, and it has different policy consequences.
4. **The wage number was the genuinely dovish datapoint, and it was buried.** Average hourly earnings rose two cents; the twelve-month rate fell to 3.2% against 3.5% expected, the lowest since May 2021. Set that beside Thursday's unit labour costs at +1.3% and productivity at +1.4% and you have two consecutive days of unambiguously disinflationary labour-cost data. That is the argument against a September hike, and it is stronger than the headline payroll, which is noisy, heavily revised, and distorted by a 50,000 fall in local-government education and a 40,000 fall in leisure and hospitality as the World Cup ended.
5. **Read that word again: hike.** After a payroll print of –23,000, CME futures still put September hike odds at 44% — down from 55% before the release — with October near 55–58% and December around 75%. The FOMC held 9–3 on 29 July with all three dissents on the hawkish side. This is a market that has spent a fortnight pricing tightening risk and spent Friday pricing slightly less of it. Nothing in Friday's reaction requires anyone to believe a cut is coming, and Wednesday's CPI is the thing that decides whether the repricing survives.
6. **China's July trade surplus was \$112.5bn and Asia has not finished trading it.** Exports rose 23.9% year-over-year to \$397.85bn against a consensus surplus of roughly \$107bn; imports rose 27.7% to \$285.35bn. Semiconductor exports nearly doubled in value terms and high-tech exports rose 40.7%. The Shanghai Composite gained 1.02% and Shenzhen 1.42% on Friday on the back of it, before any of the US move. China's July CPI and PPI land Monday, and they are the first scheduled data point of the week anywhere.

3 Rates, currencies & commodities

Rates & credit

The whole payroll rally in rates happened before lunch and most of it was gone by the bell. Friday cash closes, all confirmed this morning: 5Y 4.362% (–2.7bp), 10Y 4.660% (–1.0bp), 30Y 5.21% (~unchanged), 13-week 3.710% (–2.2bp). The 10-year's session range was 4.60–4.67. Keith noted on the Macro Show that the report “pushed the 10-year Treasury yield almost exactly to the bottom of its Risk Range near 4.59%” — and the printed low of 4.60 confirms it to within a basis point. It then closed 6bp off that low. The curve rejected the floor.

On the week the whole curve fell, and it fell most in the belly. 5Y –9.8bp, 10Y –8.5bp, 30Y –7bp. That is a modest bull flattening across five sessions, which is not what a market pricing a September hike at 44% should look like, and it is worth holding beside Keith's new steepener rather than instead of it. His trade is a view about the path from here into and out of Wednesday's CPI — near-term expectations keep falling, the long end stays pinned by growth and by inflation returning later in the quarter — not a description of the week just gone.

Credit is now five sessions indifferent, and this is the quiet fact of the week. TLT rose 0.29% to 82.76, so Hedgeye's short gave a little back. HYG rose 0.19% to 79.61, nine cents below a ceiling of 79.70. LQD rose 0.18% to 106.55 inside a band whose ceiling was trimmed to 107.1. Credit has been flat through a 464-point Dow decline and a record S&P close alike. The instrument that prices macro has declined to price any of this, which is the strongest single argument that the equity moves of the past fortnight have been rotational rather than economic.

Currencies

The dollar fell on Friday and Hedgeye bought the euro; on the week the dollar barely moved. DXY closed 99.60 having ranged 99.40–100.00, and the level is confirmed — but the change field flipped overnight from –0.33% to +0.07% and is not reliable this morning. Against the 31 July close of 99.80 the index is down 0.20% on the week, which is the number to use. The band was raised 26bp at the floor to 99.01–100.71 and remains BEARISH; spot sits 59bp above the floor. Friday's ETF Pro Plus update added a long in the Euro (FXE) — the first outright FX long in the book — and EUR/USD rose 0.32% to 1.1562. The bearish-dollar call is now expressed three ways at once: short UUP, long FXE, long gold.

The yen finally moved on Friday and is still weaker on the week, which is the part to hold on to. USD/JPY fell 0.44% to 157.745 with a session low of 156.65, breaking six sessions of one-yen paralysis, and Reuters reported traders wary of intervention risk. But 31 July closed at 157.40. Five sessions of headlines, a payroll miss and an intervention scare, and the yen is 34 pips weaker than where it started. The Friday move came entirely after the Tokyo close, which is why the Nikkei ended –0.12% having priced none of it.

Korea gave the same signal it has given all week, only louder. USD/KRW fell 1.07% to 1,407.45 — the won's largest daily gain of the week — on the day the Kospi fell for a sixth consecutive session and closed –5.10% on the week. A currency strengthening into an equity decline remains the wrong combination for a genuine risk-off, and it is now four sessions old. USD/CNH –0.09% to 6.7372; USD/TWD unchanged at 32.2350.

Commodities

Crude rose on Friday. It is worth stating plainly because this brief printed the opposite yesterday. WTI September settled \$78.18, +1.15%, inside a Hedgeye band trimmed to \$72.63–82.60; Brent settled \$83.55, +1.29%. The catalysts were the Qeshm Island engagement late Thursday and the continuing attrition on Gulf shipping, not the published Oman terms. What survives from yesterday's reading is the smaller claim: the terms themselves — a route that excludes American and Israeli vessels, charges tolls, requires war reparations and is conditional on the US lifting its blockade — are not a reopening, and the market has not priced one. What does not survive is the sentence that the market “read the document” and sold. It bought.

And the week was brutal for crude regardless. WTI fell 7.66% from the 31 July settle of \$84.67; Brent fell 7.29% from \$90.12. Friday's gain recovered about a seventh of that. Hedgeye still holds no crude position and the TREND is still bearish, which across the full week was the right side of it — a point the daily prints have obscured in both directions.

Gold is the story and it is a structural one. December futures settled \$4,399.70, +2.33% on the revised mark, and spot reached roughly \$4,340.70, a seven-week high. GLD rose 2.26%, SLV 2.95%, GDX 7.11%. What changed is not the price but the signal: Hedgeye moved gold from NEUTRAL to BULLISH TREND, lifted the band from \$4,029–4,301 to \$4,103–4,331, and covered every precious-metals short in the book. Keith's description of the mechanism was unusually specific — eight consecutive higher lows in the Risk Range, then a TRADE breakout around 4,101, then a TREND breakout — and he framed it as the exact inverse of the Korea and semiconductor shorts. On the week gold is +7.13% and silver +9.89%, which makes the precious complex the best-performing thing on this page by a factor of two.

Silver's signal caught up and copper failed at its high. September silver settled 63.499, +3.07% on the revised mark, having ranged 61.42–65.48; the band widened at both ends from 55–63 to 57–66 and the TREND moved from BEARISH to NEUTRAL, resolving a contradiction this brief had flagged for three sessions. September copper touched 6.77 — a fresh 52-week high, and the level named in Friday's brief as the thing to watch — then closed 6.591, –1.76%, near the bottom of its range, giving back more than Thursday's gain. The band is unchanged at 6.40–6.85 and the TREND is still bullish. Nat gas rose 0.83% to 2.662 inside a 2.55–2.79 band whose floor was cut 4c, and is –3.09% on the week: still the one commodity on this page with no bullish narrative attached to it.

4 Hedgeye — regime, risk ranges & the 3-1-2 Quad path

Nothing new has published since yesterday's brief. The feed's most recent item is Macro Week Summary Notes | August 7th, 2026 (05:46 GMT+8 Saturday), whose body is delivered as an image-based mailer and remains unreadable for a second attempt. Friday's Early Look “#Quad3 Longs: Gold, Healthcare, etc.” (Keith McCullough, 19:47 GMT+8 Friday) is therefore still the live risk-range set, and stands until Monday's publishes ~19:25–19:55 GMT+8. The sixteen ranges below are carried from yesterday's edition; the Early Look's print view omits the range table, so they were not re-read from source this morning — see Known gaps.

HEDGEYE MACRO DASHBOARD	READING	WHAT IT SAYS
Monthly Quad path	3 → 1 → 2	Unchanged for a fourth session. August Quad 3, September Quad 1, October Quad 2. No new Hedgeye publication has landed since Friday's set
Quad 3 allocation ranking	GOLD #1	Keith: gold is “the #1 ranked Major Asset Allocation you can make during #Quad3.” Other named Quad 3 longs are Healthcare (XLV), Tech — software specifically, not semis — REITs (XLRE) and Energy (XLE)

HEDGEYE MACRO DASHBOARD	READING	WHAT IT SAYS
Book positioning	LONG-BIASED, SELECTIVE	67 Signal Strength names. Long: gold (AAAU), software, RSP, XLV, HDV, EPHE, COLO, CPER, MSFT, AAPL, LLY. Short: EWY, DRAM, MINV, UUP, QAT, GOOGL, APP, WDC. No Europe positions
Precious metals	ALL SHORTS COVERED	Every precious-metals short was covered on Friday and gold is now a bullish allocation. Silver's signal moved BEARISH → NEUTRAL alongside it
ETF Pro Plus book	6 CHANGES, FRIDAY	ADDING LONG: Euro (FXE). ADDING SHORT: US Large Cap Long-Short Equity (LSEQ). REMOVING SHORT: Uranium (URA) 37.14-43.91, Israel (EIS) 115.0-122.0, Lithium Tech (LIT) 66.17-75.02. REMOVING LONG: Energy (XLE) 56.24-60.52 — bought Wednesday, gone Friday
New trade disclosed	LONG A STEEPENER	Keith explicitly “got long a steepener” and bought IVOL back. Near-term rate expectations fall into CPI; the long end stays pressured by growth and returning inflation
Bitcoin	NO LONGER SHORT	TRADE above ~64,000 against a TREND near 68,000 — neutral enough to do nothing rather than stay short. BTC has gone nowhere across the weekend, \$64,906 live against Friday's \$64,854
Signal Strength Stocks	67 NAMES	Added SPHR, MDB, ETSY, FRPT. Removed ILMN, RHP. Netflix was not removed — the flagged long signal has still not triggered
Publication status	NOTHING NEW SINCE FRIDAY	The feed's most recent item remains Macro Week Summary Notes, timestamped 05:46 GMT+8 Saturday. Friday's Early Look ranges stand until Monday's set publishes ~19:25-19:55 GMT+8

Risk Ranges — Friday's Early Look, live until Monday

INSTRUMENT	IMMEDIATE-TERM RISK RANGE	TREND	WHERE IT STANDS NOW
S&P 500 (SPX)	7,375 - 7,826	Bullish	7,757.64 — 68.4 below the ceiling, 382.6 above the floor. The band is 451 wide, 5.8% of the index
Nasdaq Composite	24,441 - 26,701	Bullish	26,690.62 — 10.4 points below the ceiling. The tightest any major index sat to a Hedgeye ceiling all week
Russell 2000 (RUT)	2,901 - 3,058	Bullish	3,034.49 — 23.5 below the ceiling. Keith: “next man up,” explicitly not yet bought
US 10Y yield	4.59 - 4.74%	Bullish	4.660% — 7.0bp off the floor after touching 4.60 intraday. The band contained the entire payroll reaction to within a basis point
US Dollar (DXY)	99.01 - 100.71	Bearish	99.60 — 59bp above the floor. Hedgeye added a long Euro against it on Friday morning
WTI crude	\$72.63 - \$82.60	Bearish	\$78.18 on the revised settle — mid-band, and \$1.10 higher than this brief printed yesterday. Still no Hedgeye position in crude
Nat gas	\$2.55 - \$2.79	Bearish	\$2.662 settle — mid-band. The floor was cut 4c on Friday
Gold (spot)	\$4,103 - \$4,331	Bullish	Spot ~\$4,340.70 — above the ceiling, on a signal that flipped from NEUTRAL. Dec futures \$4,399.70, further above
Silver (spot)	\$57 - \$66	Neutral	Sep futures settled 63.499 — upper half. Signal moved up from BEARISH; three sessions of contradiction resolved
Copper (spot)	\$6.40 - \$6.85	Bullish	Sep settled 6.591 — mid-band, after touching a 52-week high of 6.77 and reversing
VIX	14.74 - 17.88	Bearish	14.90 — 0.16 off the floor. The ceiling was cut 1.61 on Friday; the whole band is 3.14 wide
HY credit (HYG)	78.95 - 79.70	Bullish	79.61 — nine cents below the ceiling
IG credit (LQD)	105.4 - 107.1	Bearish	106.55 — upper half. Hedgeye's LQD short remains marginally offside
Tech (XLK)	\$174 - \$190	Bullish	187.97 — \$2.03 below the ceiling
Health Care (XLV)	\$160 - \$168	Bullish	165.68 — upper half. Hedgeye long, and the exposure was recently grossed up
Real Estate (XLRE)	\$44.40 - \$46.20	Bullish	44.98 — 58c above the floor, recovering from Thursday's low

Ranges as published in Friday's Early Look and carried forward. Where a level is “now,” it is the final Friday close or the revised Friday settle, not a live mark. Gold, silver and copper are quoted as front-month futures against Hedgeye bands that are spot — this morning that distinction is load-bearing; see Data-confidence.

What Keith actually said

On gold, and it is the whole note. “What Gold just did is a textbook Hedgeye Phase Transition... WHEN something breaks out to Bullish TRADE and TREND and it's in the Quad that likes it, we're buying it.” He then gave the mechanism in order: higher lows form in the fractal dimension, the Risk Range signals higher highs for eight consecutive trading days, price breaks out above the immediate-term TRADE level, and then

the TREND signal goes. “Every single time I've had these big Macro moves ‘right,’ that was the order of particular things that happened.”

On the symmetry, which is the part worth stealing. “Long Gold is just the upside-down Fractal View of the Semis and South Korea (EWY) Short.” One process, two directions. It also means the two positions are correlated by construction — if the fractal logic is wrong on gold it is probably wrong on Korea too, and Friday was a day when both moved against the framework simultaneously.

On being specific rather than thematic. “That doesn't mean blanket long whatever Robin Hoodie is watching on CNBC. Andrew Freedman has our community Long Atlassian (TEAM) and Short Trade Desk (TTD) this morning. Long and short. Same Sector Style. Different Signals.” Published before the open. TEAM closed +35.31%, TTD −21.90%. This is the single most checkable claim Hedgeye made on Friday and it was correct on both legs.

On energy, and the timing is now more awkward than it looked yesterday. On the Macro Show at 22:22 GMT+8 he reiterated that he bought energy after it broke TREND and that the position had helped offset losses during Thursday's decline. At 22:27 — five minutes later — ETF Pro Plus removed Energy (XLE) from the long side at a 56.24–60.52 band. XLE closed −1.13%, the worst of the eleven sectors, on a day crude rose 1.15%. The removal was right on the equity and wrong on the commodity, and the process that produced it published both sides of itself within five minutes. That is a mechanical artefact of publishing a show and a signal on the same feed, not a contradiction in the method — but anyone acting on the show alone bought a position the book was exiting.

5 Mag7 scoreboard (Fri 7 Aug close)

NAME	LAST	DAY	CAP	READ
Tesla (TSLA)	\$328.58	▲ +2.83%	\$1.298T	Best of the Mag7 and its best session in weeks. Held \$300 for an eighth session. Still 34% below its 52-week high — the year-to-date laggard having a good day
Nvidia (NVDA)	\$223.96	▲ +2.27%	\$5.425T	Added \$121bn on 104.7m shares. Keith: TRADE and TREND bullish, preferred expression “buy Nvidia and short semis” — he holds neither and is short DRAM
Amazon (AMZN)	\$274.48	▲ +0.82%	\$2.961T	Broke a three-session losing run. Back within \$39bn of the \$3 trillion handle it lost on Tuesday
Meta (META)	\$592.10	▲ +0.37%	\$1.508T	Third consecutive small gain. Still ~26% below the \$796.25 high
Apple (AAPL)	\$313.33	▲ +0.29%	\$4.573T	Fourth consecutive gain. Named a Signal Strength long again on Friday. The quiet compounder, quietly compounding
Microsoft (MSFT)	\$499.99	▲ +0.03%	\$3.713T	Missed the \$500 close by one cent, having missed it by fourteen cents on Thursday. Traded as high as 505.18 and gave all of it back
Alphabet (GOOGL)	\$354.30	▼ −0.96%	\$4.333T	The only Mag7 name down, for a third consecutive session — \$285bn gone over three days. Still a named Hedgeye short

Friday official cash closes, all re-verified this morning and unchanged. Capitalisations are Yahoo Finance primary marks, not derived. The basket rose +0.81% on a simple average — this brief's arithmetic, not a published figure. Hedgeye's MOMO Tracker put the Mag7 at +0.2%, but it was published 19:47 GMT+8 Friday, before the US session and before the payroll, and therefore refers to Thursday.

6 Positioning & options

The VIX fell on a record-high day and is now sixteen hundredths off its floor. 14.90, −1.65%, session low 14.77, against a Hedgeye band of 14.74–17.88. On Wednesday the index made a record and insurance got cheaper. On Thursday the Dow fell 464 points and insurance got cheaper. On Friday the S&P made a record close and insurance got cheaper again. Three sessions, three different tapes, one direction in volatility — and on the week the VIX is −6.82%. The band itself was cut 1.61 at the ceiling, from 19.49 to 17.88: Hedgeye is not merely observing the compression, it is modelling a lower ceiling for it.

The complacency that mattered on Thursday resolved in the market's favour, which is the awkward outcome. Yesterday's brief flagged Nasdaq implied volatility at a 19% discount to 30-day realised as “the cleanest dislocation on the page.” The event it was cheap into — payrolls — then produced a 1.30% Nasdaq rally. Cheap insurance was correctly priced on the day. That does not make the observation wrong; a 19% discount to realised is a poor price for optionality regardless of one outcome. But it is worth recording that the flag did not pay, because a brief that only records the flags that worked is not worth reading.

The Nasdaq is 10.4 points below its ceiling and the band stopped widening. COMPQ closed 26,690.62 against a 24,441–26,701 range. On Thursday Hedgeye widened that band to 9.0% of the index to absorb the

realised-volatility repricing; on Friday it raised the floor 41 points and cut the ceiling 77, narrowing it again. The index promptly ran at the new ceiling. An instrument sitting within 0.04% of a signal level going into a weekend is the definition of a Monday-morning decision, and two days of weekend headlines have not made it easier.

Positioning changed more than price did, and it changed into a weekend. Six ETF Pro Plus changes in one morning: a new FX long, a new large-cap long-short equity short, three shorts covered (uranium, Israel, lithium tech) and one long removed (energy). Add every precious-metals short covered, the Bitcoin short dropped, and a new curve steepener. That is a book being materially reshaped on a Friday, ahead of a CPI print, with a Middle East escalation running through the weekend. It is not the behaviour of a house that thinks the payroll settled anything.

The one clean flow number from the weekend is crypto, and it argues with itself. Combined spot Bitcoin and Ether ETF inflows were roughly \$1.1bn for the week — the best since April — with Bitcoin funds taking \$853.5m across five positive sessions and Ether funds \$244.9m in a fifth consecutive positive week. IBIT took more than 80% of the Bitcoin total. But weekly Bitcoin ETF volume was \$8.19bn, down 9% week-on-week and the second-lowest full week since October 2024; Ether ETF volume fell 21%. Inflows without volume is a thin bid, and both categories remain deeply negative year-to-date at $-\$4.44\text{bn}$ and $-\$873\text{m}$ respectively.

7 Sectors & rotation

SECTOR	DAY	READ
Consumer Discretionary (XLY)	▲ +1.49%	Best of the eleven. Celsius +16.83% and Wendy's +4.06% inside it. A negative payroll print produced a discretionary-led tape, which only makes sense if the market is trading policy rather than consumption
Technology (XLK)	▲ +1.42%	187.97, \$2.03 below a ceiling raised to 190. Software and semis both up, which had not happened in a week
Materials (XLB)	▲ +1.32%	Third-best, on gold. GDX +7.11%, B2Gold +22.98%. The metals complex reaching producer equities is the confirmation the gold move needed
Health Care (XLV)	▲ +0.75%	165.68. Hedgeye long, exposure recently grossed up, and named again as a Quad 3 allocation. Third consecutive gain
Utilities (XLU)	▲ +0.53%	43.61. Keith exited Utes in July and called it "a critical move" — the sector has gone sideways rather than down since
Real Estate (XLRE)	▲ +0.38%	44.98, recovering 58c off Thursday's band-floor test. A Quad 3 long that spent Thursday not working and Friday working
Industrials (XLI)	▲ +0.23%	185.18. Still carrying Thursday's Honeywell damage
Communication Services (XLC)	▲ +0.06%	111.25 — effectively flat, held down by Alphabet's third consecutive decline
Consumer Staples (XLP)	▲ +0.01%	85.12. One cent. On a record-high day, defensives were simply not needed
Financials (XLF)	▼ -0.36%	57.60. The second-worst sector on a day rate-hike odds fell — the correct sign, and a reversal of the "higher rates are good for banks" trade that ran all month
Energy (XLE)	▼ -1.13%	Worst of the eleven — and on the revised marks it fell 1.13% on a day crude ROSE 1.15%. That divergence is new information. See below

Rotation read: five sessions, five leadership groups, and the macro is still setting the order. Monday neoclouds, Tuesday semiconductor hardware, Wednesday healthcare and precious metals, Thursday energy and health care, Friday discretionary, technology and materials. Friday's three leaders were the three most rate-sensitive groups on the board, and they led on the day rate-hike odds fell. For four sessions the rotation was idiosyncratic and credit ignored it. On Friday it was macro, and credit ignored that too.

The energy row is the one to re-read on the corrected marks. XLE -1.13% against WTI $+1.15\%$ is a 2.28-point divergence in a sector that normally tracks the barrel within a point. Three explanations are available and they are not mutually exclusive: the equities were pricing the week (-7.66%) rather than the day; a Hormuz risk premium accrues to the barrel in transit rather than to producer earnings; or Hedgeye's removal of XLE from the long side at 10:27 EDT was one of several books doing the same thing at the same time. Barrick reports Monday and CoreWeave later in the week, but the cleanest test of the first explanation is simply whether energy equities follow crude up on Monday or keep discounting the weekly trend.

The equal-weight index made a record and that is the cleanest evidence for the broadening thesis all week. RSP $+0.69\%$ to 220.09 against SPY $+0.61\%$, with the 52-week high printed on the day. Hedgeye's core US equity expression is RSP and Keith restated on Friday that he is not long the cap-weighted S&P. Thursday's

36bp lag was the counter-evidence; Friday's 8bp lead is the rebuttal. Two sessions, two directions — but the record close belongs to the equal-weight index, and that is the harder fact.

8 Forward — the week ahead

Where the tape ends the weekend. Every instrument in this brief except crypto is closed and final. CME reopens Sunday 18:00 EDT — 06:00 GMT+8 Monday — and is the first price anyone will see. Asian cash markets open into a US session they never traded and two days of Middle East headlines they never traded either: Tokyo and Seoul closed at 14:00 and 14:30 GMT+8 Friday, Hong Kong at 16:00, Sydney earlier still, all before the 20:30 GMT+8 payroll. Section 12 sets out what that means instrument by instrument.

DAY (GMT+8)	KEY EVENTS
Mon 10 Aug	★ China July CPI and PPI — the first scheduled print of the week and the one Asia trades first. June CPI was +1.0% y/y and PPI +4.1%; consensus looks for CPI growth to narrow and the PPI recovery to lose momentum. ★ Barrick Mining (B) reports — the first read on whether a seven-week-high gold price is reaching producer numbers, two sessions after Hedgeye covered every precious-metals short and flipped gold to bullish TREND. GDX rose 7.11% on Friday in anticipation of exactly this. ★ Monday's Hedgeye Early Look publishes ~19:25-19:55 and supersedes all sixteen ranges in section 4
Tue 11 Aug	★ Rocket Lab (RKL), AST SpaceMobile (ASTS) and Venture Global (VG) report. ASTS rose 6.80% on Friday into the print. ★ CoreWeave (CRWV) is scheduled after the close by most week-ahead previews, though Yahoo's own calendar carries it on 12 August — see Data-confidence
Wed 12 Aug	★★ US JULY CPI, 20:30 GMT+8 — the event of the week. Consensus is headline 3.4% y/y and core 2.5%. Hedgeye's August CPI Nowcast sits at 3.60%, revised -5bp, and Keith expects rate expectations to keep moving dovishly into this print before reversing later in the quarter. That is the explicit thesis behind Friday's new steepener. With September hike odds still at 44%, a hot core does more damage to this tape than the payroll did good
Further out	28 Aug — BLS preliminary 2026 benchmark revision to payrolls. After May and June were revised down by a combined 103,000, this is a live risk to the entire employment narrative rather than a technical footnote. 4 Sep — August employment report. 27 Aug — Bank of Korea, expected to hike a second time into a Kospi already 31.3% off its peak
Watch	Whether the Nasdaq clears 26,701 — it closed 10.4 points below it. Whether gold holds above the new \$4,331 ceiling on its first test. Whether the 10-year respects the 4.59% floor it touched on Friday. Whether Korea's sixth consecutive decline becomes a seventh. And whether crude's revised +1.15% Friday close, inside a -7.66% week, is a bottom or a bounce

Times converted to GMT+8 by adding 12 hours to US Eastern. This brief was written 07:00-08:15 GMT+8 Sunday 9 August. The CPI release date is confirmed against the BLS schedule; the consensus figures are third-party week-ahead previews published 7 August and are not BLS forecasts. Earnings dates are carried from the exchange calendar surfaced on Yahoo Finance and from published week-ahead previews, and are not independently confirmed with the companies — the CoreWeave date is disputed between the two, see Data-confidence. The Bank of Korea meets 27 August; no central bank decisions fall in the coming week.

9 Corporate news

There was no material corporate news over the weekend. No M&A was announced on Saturday or Sunday and no company of consequence issued a statement. The items below are Friday's, re-verified this morning against the primary quotes; every close ties exactly to yesterday's edition.

Atlassian rose 35.31% and added roughly \$9.9bn of value on an argument about data. TEAM closed \$149.07, ranged 141.51-153.20, on strong quarterly results and a Bank of America upgrade to Buy from Neutral with the price target raised to \$175 from \$105 — a 67% target increase in one move. BofA's reasoning was that Atlassian's workflow and collaboration data could become an increasingly valuable AI asset. The 52-week range is 56.01-184.00, so the stock is neither near its high nor its low; this was a re-rating, not a recovery.

The Trade Desk lost another 21.90%, and this time there is a stated reason. TTD closed \$13.80 with a session low of \$12.83 — the 52-week low — on 132.9 million shares, 2.7 times Thursday's already-elevated 49.5 million, on a company now capitalised at \$6.5bn. The catalyst was the first guidance issued by a C-suite the company has rebuilt over the past two months, and it points to roughly a 12% year-over-year revenue decline. Wedbush read the guidance as indicating macro and structural problems. Two sessions ago the stock was \$17.67.

Twilio, Doximity and Cloudflare all rose hard and two of the three gave most of it back. TWLO closed \$241.28, +24.89%, with the session high of 254.50 also the 52-week high. DOCS closed \$27.40, +32.62%, after beating on first-quarter sales and raising FY27 guidance — but the day's high was \$39.99, meaning the stock was up roughly 93% at one point and surrendered nearly two-thirds of that before the close. NET touched \$324.73 intraday, a 52-week and all-time high, on the disclosure that more than half its network traffic is no longer human, and closed \$300.27, +5.57% — a 7.5% fade. Strong demand for the story, weaker demand for the price.

Airbnb was the largest move nobody was talking about, and it was also this brief's largest correction of the week. ABNB closed \$178.07, +17.43%, 38 cents below a 52-week high of \$178.45, after

second-quarter revenue rose 17% year-over-year to \$3.6bn and travel growth reaccelerated. Friday's edition carried an unverified after-hours figure of approximately +11%; Saturday's verification pass found the real number and corrected it. Expedia, which fell 4.09% on Thursday into the same read-across, got it exactly wrong.

The speculative complex went up as a bloc and the losers were narrow and specific. Palantir +10.32% to \$172.01 on a BofA upbeat view, dragging UiPath +7.50% and C3.ai +3.65% with it on no news of their own. SpaceX +15.83% to \$133.11 on 235 million shares — the most actively traded name in the market — on a revenue beat, lockup relief and a Terafab update. Oklo +14.77%, Fluor +16.92%, Redwire +14.88%. Against them: Sezzle -33.89%, nLIGHT -25.56%, Dave -12.96%, Post Holdings -12.79% to a 52-week low. Four unrelated companies, four single-name stories, on a day the index made a record — which is what a healthy record looks like.

10 Macro data

July non-farm payrolls -23,000, against a consensus of +80,000 to +83,000. A miss of roughly 105,000. June was revised down to +20,000 and May was cut 66,000 to +63,000, taking the twelve-month average to just +34,000. Private payrolls rose 30,000; government fell 53,000 — the headline is arithmetic on those two. Composition: local-government education -50,000, leisure and hospitality -40,000 (plausibly the World Cup ending), retail -19,000, financial activities -14,000, against healthcare +22,000 and construction +22,000. Healthcare has led job creation all year and its 22,000 is below the 36,000 twelve-month average, which is the softening that matters.

The unemployment rate fell to 4.1% and it is the most misleading number in the release. The labour force contracted by 264,000. Participation fell to 61.4%, the lowest in more than five years and — outside the Covid period — the lowest since the middle of 1976. Household employment, the survey that actually generates the unemployment rate, fell 87,000. The employment-to-population ratio slipped to 58.9%, the lowest since May 2014. The broader U-6 measure held steady at 7.9%. Bill Adams of Fifth Third: "While the unemployment rate is falling, that is mostly for the wrong reason — not enough workers."

Average hourly earnings rose two cents and the year-over-year rate fell to 3.2%. Against a forecast of 3.5%, and the lowest since May 2021. This is the number the September hike debate turns on. Put it beside Thursday's unit labour costs of +1.3% and productivity of +1.4% and the labour-cost side of the inflation argument has produced two consecutive days of clean disinflation. Wednesday's CPI will decide whether the goods-and-services side agrees; consensus is headline 3.4% and core 2.5%, and it is the core that carries the risk.

The week's labour reads resolved three-to-two soft, and the payroll broke the tie decisively. ADP +44,000 against 70-75,000 expected; ISM services employment 47.4, in contraction; JOLTS openings -178,000 to 7.359m — all soft. Against: initial claims at 199,000 and Challenger July layoffs at a two-year low of 33,429. The payroll sided with the surveys against the claims data. Note what that implies: firms are not firing, but they have stopped hiring, and the labour force is shrinking underneath both. That is a stall, not a contraction.

Market-implied Fed pricing after the print: September hike 44%, down from 55% before the release. October is reported between 55% and 58.3% depending on source, and December near 75%. It is worth being explicit about how unusual this configuration is: the economy shed jobs, and the market's modal expectation for October is still a rate increase. The funds rate is 3.50-3.75% after the 29 July hold, which passed 9-3 — with Beth Hammack (Cleveland), Neel Kashkari (Minneapolis) and Lorie Logan (Dallas) all dissenting in favour of a hike. That is the largest bloc of directional dissents since September 2016, and it landed in Chair Kevin Warsh's third meeting since taking office on 22 May. No Fed official spoke over the weekend.

China's July trade printed Friday and Asia has not finished with it. Exports +23.9% year-over-year to \$397.85bn; imports +27.7% to \$285.35bn, easing from June's +36%; surplus \$112.5bn against a consensus near \$107bn and \$97.70bn a year earlier. Semiconductor exports nearly doubled in value terms and high-tech exports rose 40.7%, with front-running ahead of prospective US tariffs cited as a driver. Typhoon disruption to port operations slowed the headline slightly. July CPI and PPI follow on Monday; June ran +1.0% and +4.1% respectively.

Elsewhere. Canada's Ivey PMI hit a four-month low in July. The US Treasury blacklisted the Dubai crypto exchange Shelbit and its founder over an alleged \$4bn sanctions-evasion scheme tied to Iran's IRGC, and the State Department sanctioned six entities and one individual over Iranian illicit digital-asset flows. The wholesale sales miss flagged two editions ago (-3.0% against +2.2% expected, inventories revised to +0.2%) still has no second source and remains one-source until confirmed.

11 Geopolitics

This is the section the weekend rewrote. Read it against the corrected crude marks in sections 1 and 3.

▼ **An ADNOC tanker was struck by a missile in the Strait of Hormuz in the early hours of Saturday.** The UAE foreign ministry “strongly condemned and denounced the hostile Iranian attack involving a missile that targeted a carrier affiliated with ADNOC as it transited through the Strait of Hormuz,” reporting no injuries, and characterised the pattern as “acts of piracy by Iran's Revolutionary Guard Corps.” ADNOC disclosed on Friday that fifteen of its vessels have been attacked since late February, three of them this week, with one crew member killed and twenty injured, and that operations have been significantly impacted.

▼ **Iran set six conditions for reopening the Strait, and they are not negotiable in the ordinary sense.** Mohammad Bagher Zolghadr, secretary of the Supreme National Security Council, said on Saturday that Hormuz will not reopen until the United States “corrects its behavior,” and listed: no further threats against Iran; a permanent end to the war with Iran and its regional allies, naming Lebanon, Palestine, Yemen and Iraq; termination of the naval blockade and withdrawal of forces around Iran; full compensation for damage in the 2025 and 2026 wars; all sanctions lifted; and the unconditional release of all frozen Iranian assets. The White House did not immediately comment.

▼ **And the IRGC severed the reopening from the Oman deal entirely, which is the single most important sentence of the weekend.** IRGC spokesman General Hossein Mohebbi told Tasnim: “Whenever the American side accepts the conditions of the Islamic Republic of Iran and abandons its interventionist approach, the conditions for reopening the Strait of Hormuz will certainly be provided,” and said reopening is “completely independent” of the Iran-Oman talks. On the same day, Iranian foreign minister Araghchi said the Oman negotiations on the legal mechanism and management of the strait are “very close” to agreement. Both statements are official and they point in opposite directions. Anyone trading a headline that an Iran-Oman framework has been signed is trading something the IRGC has explicitly said is not a reopening.

◆ **Oman finally spoke, after four sessions of silence this brief has been counting.** The Omani foreign ministry condemned “the repeated attacks on vessels transiting the Strait of Hormuz, describing them as a violation of international law and territorial waters sovereignty that threatens maritime safety as well as regional security and stability,” said negotiations “are progressing in a positive and constructive atmosphere,” and underlined “the importance of avoiding any actions that could undermine the negotiations or the progress achieved.” Iran's foreign ministry separately described the arrangement under discussion as a safe temporary route lasting one to three months, not a permanent reopening.

◆ **The Gulf states hardened too, and Qatar went furthest.** Saudi Arabia called the ADNOC strike a grave violation of international law and an assault on maritime security and global energy supplies. Qatar called it a flagrant violation, rejected Iran's use of Hormuz as a “bargaining chip,” and demanded the waterway reopen without conditions. The GCC secretary-general called it a dangerous and unacceptable escalation. The five Gulf producers had already rejected Iranian management of the strait as a gross violation of international law before the draft was published; none has accepted the current framework.

▼ **Yemen reopened as a second front, and the UN says the truce is the weakest it has been since 2022.** Yemeni government forces launched a counteroffensive against Houthi positions on Saturday along multiple axes — the first announced government offensive in months — after Houthi missiles and drones resumed shelling civilian neighbourhoods in Marib, a city hosting more than two million of Yemen's roughly five million displaced. UN envoy Hans Grundberg said Yemen “today faces a greater risk of renewed large-scale conflict than at any point since the UN-brokered truce of April 2022.” Friday's Houthi strikes on Marib camps killed two and wounded fourteen; Thursday's killed at least thirty government soldiers.

◆ **Flow and enforcement numbers, for scale.** Estimated crude movement through the Omani traffic lane is running 3–5 million barrels a day against roughly 20 million a day through Hormuz before the conflict — about a fifth of global supply. CENTCOM reports 51 commercial vessels redirected, two disabled and two boarded since the blockade was reinstated on 14 July. Kpler counted eight confirmed Hormuz crossings on 7 August, down 33% day-on-day, with Bab el-Mandeb transits up 18%. Vice-President Vance said on Saturday that Iran had told Washington it has no plans to toll the strait, that Iranian mines must be cleared before normal shipping resumes, and that the US wants guarantees commercial vessels will not be attacked.

◆ **Elsewhere: Russia escalated overnight into Saturday, and the Mecca defence pact drew a wave of endorsements.** Russia launched six Iskander-M ballistic missiles, S-400 missiles from Bryansk and 151 drones into Ukraine overnight on 7–8 August with no missiles intercepted; a drone attack in Kyiv oblast killed three members of one family in Brovary district. Ukrainian grain exports are expected to fall sharply after strikes on ports. Separately, the Turkey-Saudi-Pakistan joint defence agreement signed Friday in Mecca drew Saturday endorsements from the OIC, Bahrain, Yemen's recognised government, the Muslim

World League and the Palestinian Presidency; Erdogan said it “does not target any country and is open to the participation of all brotherly countries.”

12 Monday setup — what Asia opens into

The single most important fact on this page has not changed since yesterday, and two days of headlines have made it larger. No Asian market has traded the payroll, and none has traded the weekend. Tokyo and Seoul closed at 14:00 and 14:30 GMT+8 Friday, Hong Kong at 16:00, Sydney earlier. The US July employment report was released at 20:30 GMT+8 — four to six hours after every Asian cash market shut. Everything that followed it, plus the ADNOC tanker strike, Iran's six conditions, the IRGC decoupling the reopening from the Oman deal, Oman's first public statement and the Yemeni counteroffensive, is entirely unpriced in Asian cash equities. Monday is a catch-up open into a two-day news gap, not a continuation.

MARKET	FRIDAY CLOSE	WHAT IT HAS NOT PRICED
Nikkei 225	65,606.71 -0.12%	Closed six and a half hours before the payroll. Faces a stronger yen on the day (USD/JPY 157.745, low 156.65) against a stronger Wall Street — but note the yen is weaker on the week, 157.40 → 157.745
KOSPI	6,258.77 -0.60%	A sixth consecutive decline; -5.10% on the week and -31.3% from peak per Hedgeye. Then, after Seoul shut: EWY +1.20%, the won +1.07% and the SOX +2.56%
Hang Seng	25,668.03 +0.54%	Closed 4.5 hours early. Hedgeye flags China as overbought and moving to the top of its range — a watch-list item, not a position. China July CPI and PPI print Monday
SSE / Shenzhen	3,940.04 +1.02% / 14,311.01 +1.42%	Both were already strong on Friday, before any of the US move, and on the back of a \$112.5bn July trade surplus
TWSE	44,225.91 -0.38%	Fell on Friday, then watched the SOX rise 2.56% overnight. The cleanest single read-across on the board
ASX 200	9,263.60 -0.09%	GDX rose 7.11% after Sydney closed and gold is +7.13% on the week. The most direct beneficiary of the gold breakout
STI / Sensex	5,698.43 +1.05% / 78,499.17 -0.58%	Singapore strong, India weak, both pre-print
Europe (STOXX 50 / DAX / FTSE)	6,523.86 +0.33% / 26,319.45 +0.69% / 10,901.09 +0.31%	European cash also closed before the print. Hedgeye holds no European positions and covered its Israel short on Friday

The clean handovers, ranked. First, gold: spot at a seven-week high, GDX +7.11%, +7.13% on the week and Hedgeye flipping the signal to bullish gives Australian and Canadian resource names an unambiguous mark, with Barrick reporting Monday. Second, energy — and this one changed overnight: on the corrected marks crude rose into the weekend and then a tanker was hit on Saturday, so Asian energy names open to a firmer barrel than yesterday's brief implied, against US energy equities that fell 1.13%. Third, semiconductors: SOX +2.56% and Nvidia +2.27% after Taipei and Seoul had shut, with Taiwan the most direct expression. Fourth, the dollar: DXY at 99.60 with a new Hedgeye long in the euro supports Asian FX broadly.

The one to watch is Korea, and the setup is now genuinely two-sided. Six consecutive declines, -5.10% on the week, 31.3% from peak, and Hedgeye short through EWY, DRAM and MINV. Against that: the won had its best day of the week, EWY rallied 1.20% in New York after Seoul closed, and the semiconductor complex Korea trades off rose 2.56%. Either Monday is the sixth-decline-becomes-a-bounce that ends a one-month rout, or the bounce is sold and the short is vindicated a seventh time. Hedgeye is positioned for the second; the won has been arguing for the first for four sessions.

What could still change before the open. CME futures reopen at 06:00 GMT+8 Monday and are the first tradeable price. Between now and then the only inputs are Sunday news flow — and Sunday is, as of this writing, a blind spot: no wire copy dated 9 August was reachable in any of the sweeps behind this brief. Given Saturday's cadence — a tanker struck, Iran hardening publicly while Oman calls the talks constructive, a Yemeni counteroffensive opening — Sunday headline risk into the Globex reopen is asymmetric and unhedged. China's July CPI and PPI are the first scheduled release.

13 AI watch

The AI trade fractured again on Friday and the application side won, which is the exact inverse of Thursday. IGV rose 3.29% against SMH's 1.96%. On Thursday software fell 1.87% while semis rose 0.31%, and three billion-dollar software names lost a fifth of their value each on guidance. On Friday Atlassian rose 35.31%, Twilio 24.89%, Doximity 32.62% and Cloudflare 5.57% after touching an all-time high intraday. Two consecutive sessions, opposite verdicts, same complex, both driven by company-specific forward numbers

rather than by anything macro. Hedgeye is net long software against net short semiconductors; that leg lost 2.2 points of spread on Thursday and gained 1.33 on Friday.

Bank of America's Atlassian thesis is the cleanest articulation yet of the second-order AI trade. The upgrade argued that Atlassian's workflow and collaboration data could become an increasingly valuable AI asset — not that Atlassian sells AI, but that the proprietary data exhaust of a mature software business is the scarce input. Twilio, Doximity and Cloudflare all rose on variants of the same idea. If this framing holds, the next repricing in software is about who owns training-relevant data, not who ships a copilot.

Nvidia added \$121bn and Keith described the trade he cannot put on. NVDA +2.27% to \$223.96, capitalisation \$5.425 trillion, on 104.7m shares. TRADE and TREND both bullish. The stated preferred expression is “buy Nvidia and short semis” — a long in the single name against a short in the index it dominates — and Keith noted he holds neither and faces restrictions on trading it. The actual short in the book is DRAM, and Hedgeye published a Chart of the Day on Friday titled “From DRAM Long to DRAM Short: The Fractal Flip in Real-Time.”

China's semiconductor exports nearly doubled year-over-year in July and that belongs in this section rather than the macro one. High-tech exports rose 40.7% in total. Whatever the tariff front-running component, a doubling in value terms is the supply side of the same AI capex cycle CoreWeave will describe from the demand side later this week, and it sits awkwardly beside a Korean semiconductor complex down 31.3% from its peak. Two Asian chip economies, opposite tapes, one end market.

CoreWeave reports this week and it is the cleanest remaining read on AI capex durability. Consensus looks for revenue up 110.7% year-over-year to \$2.56bn against a wider loss of \$1.42 per share versus 60 cents a year ago. The contracted backlog, customer concentration and financing costs are what matter — they tell you whether the compute shortage is real and monetizable or whether the neocloud model is capex with extra steps. If the print lands Wednesday it shares a session with CPI, and the two halves of this market could pull in opposite directions on the same afternoon.

14 Beyond the markets

This brief told you on Saturday that crude fell on the day Iran published its terms, and called it a market that read the document. Crude rose. The document was real, the terms were as described, and the market was not reading them — it was pricing a missile fired near a shipping lane on Thursday night and, as it turned out, another one fired at a tanker on Saturday morning. The lesson is not that the analysis was wrong about the document. It is that a clean narrative arrived one settlement cycle before the number that was supposed to support it, and the narrative got printed anyway.

The American economy shed 23,000 jobs and the S&P 500 closed at the highest level in its history on the same day. Both statements are true, neither is a mistake, and the reconciliation is that the index is a discount mechanism for policy and the payroll is a description of the past. It is still a sentence worth sitting with before quoting either half of it.

The unemployment rate improved because a quarter of a million people gave up. 264,000 left the labour force; participation fell to 61.4%. Outside the pandemic, Americans have not participated in their own labour market at this rate since the middle of 1976 — before the entry of most of the women who would define the following four decades of labour supply. The number will be reported as 4.1%, down from 4.2%, and it will be reported as good news.

A project-management software company was worth \$9.9bn more on Friday evening than Friday morning because an analyst said its data might be useful to a machine. Atlassian +35.31%, on results plus a price target that went from \$105 to \$175 in a single revision. Nothing about the business changed between Thursday and Friday.

Iran has now said, on the record and on the same day, that a deal with Oman on the Strait of Hormuz is very close and that reopening the Strait is completely independent of that deal. Six conditions were attached, one of which is that the United States must never threaten Iran again. Fifteen ADNOC vessels have been attacked since February. About a fifth of the world's oil used to move through that water; three to five million barrels a day now do. Crude ended the week down 7.66%.

A tanker leaking off southern Oman since mid-July has produced a slick that Greenpeace measured at roughly 20 square kilometres on 24 July and about 600 by 4 August. It is a suspected Russian shadow-fleet vessel, it is nowhere near Hormuz, and it has not moved a single price on any page of this brief.

15 Appendix — stock cards

Names in focus plus the levels that matter — last · day · capitalisation · band or next key date · one-line read. Every equity price is a Friday 7 August cash close; commodity prices are the revised Friday settles. The only live marks in this edition are the crypto quotes in section 1. No charts.

The row that changed, and the one that did not

WTI CRUDE (SEP) \$78.18 ▲ +1.15% · week −7.66% REVISED from −0.27% · band \$72.63-82.60 BEARISH · no Hedgeye position Rose on Friday, not fell. Then a tanker was hit on Saturday. The weekly decline is still the bigger fact.	ENERGY SELECT (XLE) \$57.50 ▼ −1.13% WORST SECTOR · Hedgeye REMOVED from long at 56.24-60.52 Fell 1.13% on a day the barrel rose 1.15%. Bought Wednesday, reiterated on air 22:22, removed from the book 22:27.
GOLD (DEC) \$4,399.70 ▲ +2.33% · week +7.13% Spot ~\$4,340.70, seven-week high · band \$4,103-4,331 BULLISH Signal flipped from NEUTRAL. Eight higher lows, TRADE breakout ~4,101, then TREND. All precious shorts covered.	SILVER (SEP) \$63.499 ▲ +3.07% · week +9.89% REVISED from +3.56% · ranged 61.42-65.48 · band \$57-66 NEUTRAL The largest percentage revision on the page. Band widened at both ends, signal up from BEARISH.

The pair Hedgeye published before the open

ATLASSIAN (TEAM) \$149.07 ▲ +35.31% Cap \$37.8bn · BofA to Buy, PT \$105→\$175 · 52wk 56.01-184.00 Named long in Friday's Early Look before the open. Added ~\$9.9bn on an argument that its workflow data is an AI asset.	THE TRADE DESK (TTD) \$13.80 ▼ −21.90% Cap \$6.5bn · 132.9m shares · session low 12.83 = 52wk low Named short in the same paragraph. 2.7× Thursday's capitulation volume, on a company a tenth the size of the buyer.
TWILIO (TWLO) \$241.28 ▲ +24.89% Cap \$36.6bn · session high 254.50 = 52wk high Closed at the top of its 52-week range on robust results. The software complex's second-largest move.	DOXIMITY (DOCS) \$27.40 ▲ +32.62% Cap \$4.9bn · day range 27.16-39.99 · 52wk 17.15-76.51 Was up ~93% intraday and gave back nearly two-thirds. Beat on Q1 sales, raised FY27 guidance. The fade is the story.

The Mag7 edges, and the one that keeps not working

NVIDIA (NVDA) \$223.96 ▲ +2.27% Cap \$5.425T · +\$121bn · 104.7m shares · no published Risk Range TRADE and TREND bullish. Keith's preferred expression is “buy Nvidia and short semis” — he holds neither and is short DRAM.	MICROSOFT (MSFT) \$499.99 ▲ +0.03% Cap \$3.713T · high 505.18 · Signal Strength long Missed the \$500 close by one cent, having missed it by fourteen on Thursday. Traded above 505 and gave all of it back.
ALPHABET (GOOGL) \$354.30 ▼ −0.96% Cap \$4.333T · −\$285bn over three sessions · Hedgeye SHORT The only Mag7 name down, for a third day. The repricing is now a week old and still has not found a floor.	SOUTH KOREA (EWY) \$166.09 ▲ +1.20% Hedgeye SHORT · Kospi 6,258.77, −0.60% Friday, −5.10% on the week Seoul fell before the payroll; EWY rallied after it. The won gained 1.07%. The short is intact and the setup is two-sided.

Where the week actually went

EQUAL WEIGHT S&P (RSP) \$220.09 ▲ +0.69% RECORD CLOSE · 52wk high 220.37 · vs SPY +0.61% Hedgeye's core US equity expression, and the broadening thesis's best evidence of the week. Keith is not long the cap-weighted index.	BITCOIN (LIVE) \$64,906.56 ▲ +0.02% (24h) 07:19 GMT+8 Sunday · ETF inflows \$853.5m, volume −9% w/w Went nowhere across the weekend. Best inflow week since April on the second-lowest volume since October 2024.
---	--

Sources

Market data. Yahoo Finance multi-symbol quote comparison pages, captured 07:05-07:20 GMT+8 Sunday 9 August, after all markets had settled, in five batches: US cash indices and Treasury yield indices (^GSPC, ^IXIC, ^DJI, ^RUT, ^SOX, ^VIX, ^TNX, ^TYX, ^FVX, ^IRX); futures, commodities, FX and crypto (ES=F, NQ=F, YM=F, RTY=F, CL=F, BZ=F, NG=F, RB=F, GC=F, SI=F, HG=F, DX=Y.NYB, JPY=X, KRW=X, TWD=X, CNY=X, EURUSD=X, BTC-USD, ETH-USD, SOL-USD); the eleven SPDR sectors and reference ETFs (RSP, SPY, HYG, LQD, GLD, SLV, EWY, SMH, IGV, TLT); single names (NVDA, MSFT, AAPL, AMZN, META, GOOGL, TSLA, PLTR, TEAM, TTD, NET, ABNB, NFLX, INTC); and Asian and European indices (^N225, ^KS11, ^HSI, 000001.SS, 399001.SZ, ^TWII, ^AXJO, ^STI, ^BSESN, ^STOXX50E, ^GDAXI, ^FTSE). A second crypto capture was taken at 07:19 GMT+8 for the live marks. Prior-session bases for the reconciliation chain are the closes published in the 8 August and 2 August editions of this brief.

Crude cross-check. The WTI and Brent sign flip was verified against two independent sources before the narrative in sections 3, 11 and 14 was rewritten: a settled-price search returning WTI \$78.18 and Brent \$83.55 for Friday 7 August, and market commentary confirming Brent “gained more than 1% to close at \$83.55 a barrel” with WTI advancing “about 1% to settle at \$78.18.” The −7% weekly figure reported by the same source reconciles exactly against the 31 July settles this brief published on 2 August (84.67→78.18 = −7.66%; 90.12→83.55 = −7.29%).

Hedgeye — FULL logged-in edition, feed read 07:00-07:05 GMT+8 Sunday. The research feed was reachable and the account's entitlements were confirmed (Bitcoin Trend Tracker, Capital Allocation Pro, Digital Assets Pro, Early Look, ETF Pro Plus, Momentum Stock Tracker, Signal Strength

Stocks, The Macro Show). The most recent item on the feed is Macro Week Summary Notes | August 7th, 2026, timestamped 08/07/26 05:46 PM EDT. Friday's Early Look "#Quad3 Longs: Gold, Healthcare, etc." was re-read in full from its print view for the quotations in section 4.

Weekend news. Hormuz, Iran and Gulf-state material: NBC News, Fortune, Times of Israel, Al Jazeera, Bloomberg, Haaretz, Fox News, Gulf News, The National, Middle East Eye and the Omani foreign ministry's own statement page. Yemen: Al Jazeera reporting from Sanaa and UN envoy remarks. Ukraine: wire aggregation and the Russo-Ukrainian war timeline. Crypto flows: The Block, citing SoSoValue. China trade and inflation: CNBC, Washington Times, TradingEconomics and China's State Council statistics release of 7 August. Week-ahead consensus and Fed pricing: CNBC's report of CME FedWatch, and IG and Kiplinger week-ahead previews published 7 August.

Data-confidence

(1) The headline correction. Yesterday's edition printed WTI September at \$77.08 (−0.21 / −0.27%) and Brent at \$82.27 (−0.22 / −0.27%). Both were wrong. The settled marks are \$78.18 (+0.89 / +1.15%) and \$83.55 (+1.06 / +1.29%), verified against two independent sources and reconciling off the identical Thursday base. The error originated in a Saturday-morning capture of the last electronic print rather than the exchange settle, which is the same failure mode that produced the 2 August revisions to WTI, copper and nat gas. Every sentence in yesterday's brief that turned on crude falling — principally the “the market read the document” reading in sections 3, 11 and 14 — is withdrawn and rewritten here.

(2) Twelve rows revised in total, all in the futures and commodity complex, and every one reconciles off the same Thursday base — which is how we know this is a settlement revision rather than a different contract. Equity indices, yields, the VIX, all twenty-one ETFs, all fourteen single names and all twelve Asian and European closes tie exactly to yesterday. In eight days of weekend editions the equity rows have never revised and the commodity rows have revised twice. Treat Saturday commodity marks as provisional.

(3) The DXY change field is unreliable and the level is not. Both editions carry 99.60. Yesterday's change was −0.33 / −0.33%, implying a Thursday close of 99.93; this morning's is +0.06 / +0.07%, implying 99.54. The two cannot both be right and the source has not resolved. The weekly figure used in section 3 (−0.20% from the 99.80 close of 31 July) does not depend on either and is the number carried in the text.

(4) The RBOB gasoline row is unusable for the second time in three sessions. The quoted price of \$2.9853 sits outside the quoted day range of 2.69–2.76, which is diagnostic of a contract roll rather than a price move. The row is printed in section 1 with the caveat attached and is not used anywhere in the analysis.

(5) Gold is compared across two instruments and the distinction still matters. December futures settled \$4,399.70. The spot mark carried from Reuters yesterday was \$4,340.70 and was not re-verified this morning. Hedgeye's band of \$4,103–4,331 is spot. On spot, gold closed roughly \$9.70 above the ceiling; on futures about \$69 above. The claim that gold has broken above its Hedgeye ceiling holds on both marks; the magnitude does not.

(6) The CoreWeave earnings date is disputed. Yahoo Finance's earnings calendar carries CRWV on 12 August; multiple week-ahead previews put it after the close on 11 August. These may describe the same event under different conventions. Section 8 carries both and the analysis does not depend on which is right, except in the specific case of whether it shares a session with CPI.

(7) The July payroll consensus is reported as +80,000 by some sources and +83,000 by others, making the miss either 103,000 or 106,000. October hike odds are reported between 55% and 58.3%. The September figure of 44%, and the fact that it fell from 55% on the release, are corroborated across sources. None of the arguments in section 10 depend on which end of these ranges is right.

(8) Yahoo's 52-week high field for ^GSPC reads 7,793.68, which is above Friday's all-time intraday high of 7,763.08. Yesterday's edition noted correcting a stale 52-week field on the same instrument; the field is still inconsistent this morning. The record-close claim rests on the closing series, not on this field, and is unaffected.

(9) The Mag7 simple average (+0.81%) is this brief's arithmetic, not a published figure, and is not comparable to Hedgeye's MOMO Tracker reading of +0.2%, which was published before Friday's session. Weekly percentage changes throughout are computed from the 31 July closes published in the 2 August edition. Atlassian's ~\$9.9bn of added value is derived from reported capitalisation and the percentage move, not from a share count.

Known gaps

Sunday is a blind spot, and it is the largest gap in this edition. No wire copy dated 9 August 2026 was reachable in any search or fetch behind this brief; every indexed source tops out on Saturday 8 August. Given Saturday's cadence — a missile strike on an ADNOC tanker, Iran publicly hardening while Oman calls the talks constructive, a Yemeni government counteroffensive opening — the risk of a Sunday headline arriving before the 06:00 GMT+8 Globex reopen is real and this brief cannot speak to it.

Hedgeye content not fully readable, for a third consecutive session. The Macro Week Summary Notes body is delivered as an image-based mailer and no text was extractable; only the section list is visible (Macro Dashboard, Weekly Macro Commentary, VIX Gauge, U.S. Monthly Quad Forecast, Chart of the Week, Market Insights, Recommended Research). The Early Look's print view carries the full commentary but omits the Risk Range table, so the sixteen ranges in section 4 are carried forward from yesterday's edition rather than re-read from source — they have not changed, because nothing new has published, but they were not independently re-verified this morning. Portfolio Solutions Daily ETF Re-Rank is outside this subscription's entitlements. The MOMO Tracker body, Crypto Quant and the Capital Allocation Pro Daily Dashboard were not read.

Unresolved and uncarried. The Hormuz blockade start date remains disputed between NPR's “since the war began in February” and the 8 July date carried in earlier editions; neither is retracted. The Qeshm Island explosions of Thursday night are still unexplained — Iranian state media reported armed forces confronting “hostile enemy targets,” a Hormozgan deputy governor denied any strike or incident occurred, and no weekend follow-up added facts. The promised announcement of the naval forces' “achievements” has not appeared. The spot gold mark was not re-verified this morning. Reuters' Market Talk items were headline-only video and were not viewed. No after-hours tape is carried, because Friday's after-hours session closed before this brief was written and weekend quotes are unreliable.

Signals that did not fire, which is information. Netflix was not removed from the Signal Strength list; NFLX closed 74.14, +0.61%, and the flagged long trigger has not come. No single-name Risk Range has been published for three consecutive sessions. Hedgeye publishes no Risk Ranges for Utilities, Financials, Energy, Communication Services, USD/JPY, Brent, Bitcoin or any Asian index — which is why the largest book change of the week, the XLE removal, carries no band in section 4 beyond the one quoted in the ETF Pro note itself. And no Fed official spoke over the weekend, three days ahead of CPI.

Timing

This is the Sunday weekend edition, Day 2, generated 07:00–08:15 GMT+8 Sunday 9 August 2026. Every market referenced except crypto is closed and every level is a final Friday close or a settled Friday mark; the only live prices are the crypto quotes captured 07:19 GMT+8 and flagged LIVE in section 1. US cash equities settled at 04:00 GMT+8 Saturday and CME futures at 05:00; nothing reopens before CME's restart at 06:00 GMT+8 Monday, and Asian cash markets open later that morning. Section 12 is written as a Monday-open preview rather than an overnight tape, because there is no overnight tape to write. The sixteen Risk Ranges in section 4 are Friday's and stand until Monday's Early Look publishes around 19:25–19:55 GMT+8 Monday. This is the FULL Hedgeye edition — the logged-in browser was reachable and the feed was read, though no new research has published since Friday. Verify prices before acting on Monday.

END OF BRIEF · DAILY NEED TO KNOW · SUNDAY 9 AUGUST 2026 · FULL HEDGEYE EDITION · WEEKEND EDITION (DAY 2)

Next edition: Monday 10 August, covering the Monday Asian session, the Globex reopen and Friday's US close. Hedgeye's Monday Early Look publishes ~19:25–19:55 GMT+8 and supersedes every risk range printed here.
