

DAILY NEED TO KNOW

Sunday, 2 August 2026 · Pre-market brief for Anne Wong

Covering the **Friday 31 July 2026 US session as finally settled** — several marks were revised after Saturday's edition went out — plus the weekend. All times GMT+8 (HKT).

Edition: **FULL** — Hedgeye logged-in edition. **WEEKEND EDITION, DAY 2.** Cash and futures markets are shut. CME Globex reopens 06:00 GMT+8 Monday; Asian cash markets Monday 3 August. The only live prices in this brief are crypto, captured 07:10 GMT+8 Sunday.

1

Market snapshot — Friday 31 July, final settles

ASSET	LAST	CHANGE	NOTE
S&P 500	7,489.72	▲ +52.09 / +0.70%	Confirmed. Ranged 7,399.83–7,512.04; closed 48pts under the 7,538 ceiling
Nasdaq Composite	25,373.85	▲ +251.68 / +1.00%	Confirmed. Ranged 25,004.33–25,460.86. Still –6.7% from the 27,190.21 June record
Dow Jones	52,485.03	▲ +276.97 / +0.53%	Confirmed. FOURTH straight winning month (+0.32% in July)
Russell 2000	2,931.34	▼ –14.76 / –0.50%	Confirmed. The only major index down. Ranged 2,902.47–2,955.83
US 2Y yield	4.262%	▲ +3.3 bp	CNBC 17:05 EDT. Ranged 4.227–4.308% intraday
US 5Y yield	4.460%	▲ +8.5 bp	Led the curve. 52-week high is 4.47% — one basis point away
US 10Y yield	4.745%	▲ +8.2 bp	HIGHEST SINCE JANUARY 2025. Yahoo now carries 4.75% as the 52-week high — set on this close. THROUGH Hedgeye's 4.71% ceiling
US 30Y yield	5.28%	▲ +7 bp	A 19-YEAR HIGH — Hedgeye dates it "highest since 2007". The 52-week high is this print
Gold (front)	\$4,107.00	▼ –53.60 / –1.29%	REVISED from \$4,098.60 / –1.49%. Ranged \$4,076.40–\$4,170.70. Back inside the \$3,991–\$4,139 band
Silver	\$57.786	▼ –1.231 / –2.09%	Confirmed. Off the \$60 ceiling it was pressing. Still a bearish TREND
WTI crude	\$84.67	▲ +1.08 / +1.29%	REVISED from \$86.80 / +3.84%. Ranged \$81.06–\$86.87 — a 7.2% intraday swing that half-retraced into the settle
Brent crude	\$90.12	▲ +1.09 / +1.22%	Unchanged, but the quote is a 14:28 EDT print and thin. Best month for crude since the war began
Copper	\$6.4655	▼ –0.0090 / –0.14%	REVISED — SIGN FLIP from +0.51%. Copper fell on Friday. Still inside a raised \$6.19–\$6.59 band
Nat gas	\$2.747	▼ –0.011 / –0.40%	REVISED from +1.23%. Still bearish TREND
US Dollar (DXY)	99.80	▼ –0.11%	Level firm; the delta moved again. Held the 99.76 floor by 0.04. Ranged 99.69–100.46
USD/JPY	157.40	▼ –1.38% (yen up)	Now reported as joint US–Japan buying, not MoF alone. 52-week low print 163.98
VIX	15.99	▼ –1.10 / –6.44%	Confirmed. Ranged 15.82–18.70. Signal DOWNGRADED to BEARISH
S&P futures (ES)	7,519.25	▲ +46.75 / +0.63%	REVISED from 7,503.50 / +0.41%. Shut until 06:00 GMT+8 Monday
Nasdaq-100 fut (NQ)	28,404.25	▲ +166.50 / +0.59%	REVISED from 28,287.00 / +0.17%
Bitcoin (live)	\$62,771.74	▼ –0.09% (24h)	07:10 GMT+8 Sunday. ETH \$1,845.98 (–0.80%), SOL \$71.95, XRP \$1.0607, BNB \$575.23 (–1.94%)

Colour key: ▲ up ▼ down ◆ neutral/mixed ► little changed. Green/red denote whether the move is **risk-positive**, not direction. Equity closes, ETF closes, yields, VIX and every Asian index re-verified this morning against Saturday's edition and tie **exactly**. Commodity and futures rows marked **REVISED** are Yahoo's settled Friday marks captured 07:15 GMT+8 Sunday; Saturday's edition used 16:59 EDT electronic quotes. Every revised row still reconciles off the same Thursday base — WTI 83.59+1.08=84.67, gold 4,160.60–53.60=4,107.00, nat gas 2.758–0.011=2.747, silver 59.02–1.23=57.79, copper 6.4745–0.009=6.4655 — so this is a settlement revision, not a different contract. Crypto changes are rolling 24-hour, not session.

TL;DR: Nothing traded, and three of Friday's numbers changed anyway. The equity tape is exactly where Saturday left it — S&P 7,489.72, Nasdaq 25,373.85, Kospi 6,595.45 — and every single-name and index close re-verified to the tick this morning. What did not hold was the commodity complex. WTI did not settle at \$86.80, +3.84%; it settled **\$84.67, +1.29%**, having traded \$81.06 to \$86.87. Copper did not rise 0.51%; it **fell 0.14%**. Gold's loss was –1.29%, not –1.49%. Natural gas fell rather than rose. The direction of Friday's narrative survives — crude still reversed violently off the Asian lows on the Kuwait strike and the Fars tanker report — but the magnitude does not, and anyone who sized an energy position off a 3.84% close is working from a number that was never the settle.

Two genuinely new facts arrived over the weekend, and both matter more than the revisions. First, Bloomberg reports the yen buying on Friday was **joint US–Japan**, with Japan's top currency diplomat Atsushi Mimura declining to comment on intervention but hinting at US involvement. A coordinated G2 operation is a different instrument from a unilateral MoF defence, and it changes the

reaction function for anyone short yen into September. Second, a **Qatari LNG carrier — the Gaslog Shanghai — was struck by a projectile 11 nautical miles northeast of Lima, Oman**, on Saturday, engine room disabled, no casualties. The war has now hit the gas trade at the mouth of Hormuz.

And Hedgeye published its Macro Week Summary at 05:59 GMT+8 Saturday — the piece last edition flagged as unretrieved. It carries the dashboard: **US Monthly Quad 3, US Quarterly Quad 4, Global Quad 3**, a VIX gauge reading **15.99 and sitting in the "Investable Bucket"** at the very moment the signal was downgraded to bearish, and a rates note dating the 30-year to its **highest since 2007**. Keith's written framing: he bought the dollar dip and added UUP; long-end yields signal bullish TREND globally "from Japan to America"; and he is front-running Warsh's next move toward **an August inflation re-acceleration that prints in September**.

What changed since Saturday's edition — and what did not

- ▼ **WTI: \$84.67, not \$86.80.** The single most consequential revision. Saturday's brief built a paragraph on "a 5% intraday reversal in crude on the last day of a month in which crude rose more than 20%". The reversal is real and larger than described in one direction — the low was **\$81.06**, so the intraday range was 7.2% — but the close gave back \$2.20 of the late spike. Hedgeye's band (\$79.27–\$92.90, bullish TREND) still contains it comfortably, and \$84.67 sits closer to the middle than the top. The refiner divergence stands: **CRAK –1.04% on an up day for crude**, which is still the first crack in that expression.
- ▼ **Copper flipped sign: –0.14%, not +0.51%.** This one changes a claim, not just a decimal. Saturday described copper as "the exception" and the only metal that rose. It did not rise. **Every metal on the sheet fell on Friday** — gold –1.29%, silver –2.09%, copper –0.14%, palladium and platinum both lower. Copper remains the only bullish-TREND metal and remains inside a ceiling raised to \$6.59, but it did not participate. The Quad 3 metals trade was given back in full, not in part.
- ◆ **Gold –1.29% to \$4,107.00, and nat gas –0.40% to \$2.747.** Smaller adjustments. Gold's day range of \$4,076.40–\$4,170.70 means it traded **above** the \$4,139 Hedgeye ceiling intraday and closed 32 points inside it — the overshoot resolved downward within the session, which is a cleaner version of the same point.
- ▲ **Futures were marked higher, not lower.** ES 7,519.25 (+0.63%) against the 7,503.50 (+0.41%) carried Saturday; NQ 28,404.25 (+0.59%) against 28,287.00 (+0.17%). Friday's late session was better in the futures than the cash close suggested. That is a marginal positive for Monday's gap, and it is the only revision that cuts that way.
- **Everything in equities held.** S&P, Nasdaq, Dow, Russell, VIX, all seven Mag7 names, EWY 157.10, SMH 540.53, XLK 175.35, HYG 79.48, LQD 106.25, RSP 215.01, CRAK 55.24, GVIP 167.99, XLE 59.55 — and every Asian index, Kospi 6,595.45 through Straits 5,628.50 — re-verified to the tick. One small refinement: XLK's own close was **–0.22%**, against the –0.15% quoted for the Technology sector aggregate. Same story, marginally worse.

2 The big picture — what it means

1. The correction does not rescue the bond market's verdict — it sharpens it. The one price that broke on Friday was the 10-year, closing 4.745% and 3.5bp above a ceiling Hedgeye had *lowered* that morning to 4.71%. Nothing about the weekend changed that. What the revisions do is remove the counterweight: on Saturday's numbers you could say equities rallied 0.70% into a 19-year high in the long bond *while commodities confirmed the inflation impulse*. On the settled numbers, commodities did not confirm it. Crude rose a third as much as reported, every metal fell, and natural gas fell. So Friday was a day on which **yields made new highs and the inflation-sensitive complex sold off together**. That is not a reflation trade. That is a discount-rate problem.

2. The leadership rotation inside 24 hours is unchanged and remains the story. Asia priced Thursday's New York close and got a record: Kospi +17.91% to 6,595.45, SK Hynix +29.95%, Samsung +26.81% — both larger than the +25%/+20% the press carried on Saturday — Taiwan +7.98%, Nikkei +4.03%. New York then sold every one of those names: Micron –5.90% from a \$930.88 high, AMD closing \$476.15 having printed \$515.62, SMH giving back \$21, and EWY — the only real-time mark on Korea's record day — closing **–2.55% after trading +5.7%**. The index rose anyway, on Amazon +15.32% and Alphabet +6.73%. Cloud, not chips.

3. July's Korean number is worse than the record day suggests. The Kospi's +17.91% single session was the largest in its history. It was also inside a month in which the index fell **22.19% — its worst month since 1997**. Both facts belong to the same 22 sessions. A market that loses a fifth of its value in a month and then posts its best day ever is not recovering; it is oscillating with the risk controls off. Keith's arithmetic remains the one to hold: down 60%, you need 150% back.

4. The intervention was probably not Japan acting alone. Bloomberg's Friday piece — "Yen Gains on Intervention, Reports of Buying by Both US, Japan" — has US and Japanese authorities buying yen and selling dollars during New York trading, with Mimura declining to confirm but pointing at US involvement. If that is right, three things follow. It explains why the second operation held where the first faded. It means the US Treasury now has a revealed preference on the dollar, one day after Keith initiated a long dollar position against the euro. And it makes the September BoJ meeting a two-government event rather than a one-central-bank one.

5. And the week that starts Monday is the week Keith named. He warned explicitly that vol-control and systematic funds could begin selling *after* month-end, that negative gamma amplifies declines and produces sharp countertrend rebounds, and that "the first week after month-end" is the one that matters. That week begins with Asia reopening into a US tape that faded its record, a VIX at 15.99 with a bearish signal and a lowered band, ISM Manufacturing on Monday, ADP and ISM Services on Wednesday,

and the July employment report on Friday. The insurance has not been this cheap in three weeks and the calendar has not been this dense since the FOMC.

3 Rates, currencies & commodities

- **Rates, and the bear steepener that will not stop.** 30Y 5.28% (+7bp), 10Y 4.745% (+8.2bp), 5Y 4.46% (+8.5bp), 2Y 4.262% (+3.3bp), 13-week bill 3.682% (+0.7bp). The belly led — the market pricing neither an imminent hike nor any relief, just more term premium. The 5Y, 10Y and 30Y are all at or within a basis point of their 52-week highs; Yahoo now carries **4.75% as the 10-year's 52-week top and 5.28% as the 30-year's**, both effectively set on Friday's close. Hedgeye's written weekly note dates the long end to its **highest since 2007** and says the vigilantes took over after "Warsh's FOMC effectively handed policy back to 'the market'."
- **Credit stopped voting no without voting yes.** HYG 79.48, +0.01%, UPGRADED Bearish → Neutral (78.97–79.76). LQD 106.25, –0.15%, still bearish and sitting on the very bottom of its 52-week range at 106.00 — the day's low was the 52-week low. So high yield stopped falling and investment grade kept falling, on a day the S&P rose 0.70% and the long bond made a 19-year high. The HY signal has flipped four times in five sessions. Unstable credit signals have preceded every leg of this drawdown.
- **The yen, twice in 48 hours — and now reportedly with Washington.** USD/JPY 157.40, –1.38%, week-to-date the dollar down 3.3% against the yen, the biggest weekly slide since July 2024, having printed a 40-year low of 163.98 on Thursday. Bloomberg reports both US and Japanese authorities buying yen in New York hours on Friday. The BoJ then held at 1.00% on an 8–1 vote (Takata dissenting for 1.25%) and warned core inflation will run "clearly above" 2% from the second half of FY2026. DXY 99.80, EUR/USD 1.1527, GBP/USD 1.3487, AUD/USD 0.7025 — a yen event, not a dollar event.
- **Oil: the reversal was bigger and the close was smaller.** WTI settled **\$84.67, +1.29%**, inside a \$81.06–\$86.87 range. It was \$82.24 in Asian hours on Commonwealth Bank estimates that Hormuz traffic had recovered to 30–35% of pre-war levels; it spiked through \$86.80 on the Kuwait strike and the Fars tanker report; it gave back \$2.20 into the settle. Brent \$90.12 (+1.22%). For the month crude still posted its best gain since the war began, and Hedgeye's \$79.27–\$92.90 bullish band contained all of it. **OPEC+ has agreed to raise August production targets** — that bearish supply input is now live against a risk premium that Saturday's LNG strike just re-inflated.
- **Metals: the whole complex went, not most of it.** Gold –1.29% to \$4,107.00 (high \$4,170.70, above the \$4,139 ceiling intraday); silver –2.09% to \$57.786, off the \$60 top; **copper –0.14% to \$6.4655**, correcting Saturday's +0.51%; palladium –2.31%; platinum –0.28%; natural gas –0.40% to \$2.747. Precious metals selling off while the dollar sits on its floor and real yields make new highs is the cleanest possible statement that Friday's marginal buyer was reaching for duration-insensitive cash flows. With copper corrected, there is no exception left to that statement.

4 Hedgeye — regime, ranges & the weekend Macro Week Summary

New this weekend. Hedgeye published *Macro Week Summary Notes, July 31st 2026* at 17:59 EDT Friday — **05:59 GMT+8 Saturday**, i.e. after the last brief's data cut. It is the only Hedgeye item published since Friday morning; the feed has been silent through Saturday and Sunday. The next Early Look and the next full Risk Range set publish **~19:25–19:55 GMT+8 Monday**, after which every range in the table below is superseded.

HEDGEYE MACRO DASHBOARD	READING	WHAT IT SAYS
US MONTHLY	QUAD 3	Growth slowing, inflation accelerating. Positioning label: Stagflation Protection
US QUARTERLY	QUAD 4	Growth slowing, inflation slowing. Positioning label: Defensive + Volatility Assets
GLOBAL	QUAD 3	Growth slowing, inflation accelerating. Stagflation Protection
VIX Gauge	15.99	Needle in the "Investable Bucket" (VIX 9–19) , below the Chop Bucket (20–29) and well below the tail bucket (30+)

The month and the quarter disagree, and that is the position-sizing problem in one line: the monthly model says buy inflation protection, the quarterly model says buy defensives and volatility. The VIX gauge sits in the most benign bucket on the same sheet where the VIX Risk Range signal was **downgraded to bearish**. Cheap insurance inside a stagflation monthly and a Quad 4 quarterly is not a contradiction — it is the setup.

Keith's written weekly commentary — verbatim substance

- ▲ **USD.** "The US Dollar Index held its Bullish TREND but broke immediate-term TRADE support, and as the equity crash forced leveraged funds to de-gross and raise cash — mechanically bidding the Dollar — we finally got our first oversold Buy Signal against both Euros and Yens, so we bought the dip and added **US Dollar Bullish (UUP)** to the Long side." Note the difference from the Macro Show framing: the written note has him buying against **both** euro and yen; the Friday show explained the expression as euro-only "because the Bank of Japan sounded relatively hawkish overnight."
- ▼ **Rates.** "The long end did the repricing this week — after Warsh's FOMC effectively handed policy back to 'the market,' the bond vigilantes took over, ripping the 30yr UST yield to its **highest level since 2007** as 2s10s steepened on re-accelerating inflation expectations. Long-term yields signal Bullish TREND globally from Japan to America, which keeps **Global #Quad3 Stagflation** as our GIP Model base case for 2H 2026 — and we'll keep front-running Warsh's 'next move' toward an **August inflation re-acceleration that prints in September.**"

- ◆ **Volatility.** "Bond-market vol (MOVE) continues to flag a rates situation that only 'gets more volatile,' while SPX remains in **negative-gamma territory**. Semis drove more than 30% of the index-level gain even as **over half of SPX constituents closed red** — the **third-largest SPX-vs-equal-weight return spread on record**." That last figure is the written, sourced version of the equal-weight point Keith made verbally on the Macro Show, and it is more specific than the "comparable only with 2000 and the pandemic" framing carried on Saturday.

Risk Ranges — Friday's Early Look, unchanged until Monday evening

INSTRUMENT	IMMEDIATE-TERM RISK RANGE	TREND	WHERE FRIDAY CLOSED
S&P 500 (SPX)	7,316 – 7,538	Bullish	7,489.72 — 48pts under the ceiling, top quarter of the band
Nasdaq Composite	24,314 – 25,569	Bearish	25,373.85 — 195pts under the ceiling
Russell 2000 (RUT)	2,904 – 2,990	Bullish	2,931.34 — fell back toward the floor
US 10Y yield	4.59 – 4.71%	Bullish	4.745% — BROKE THROUGH a ceiling lowered that morning from 4.75%
US Dollar (DXY)	99.76 – 102.01	Bullish	99.80 — held the floor by 0.04. New long initiated; UUP added
WTI crude	\$79.27 – \$92.90	Bullish	\$84.67 (revised) — nearer mid-range than the top. Bearish TRADE, bullish TREND
Nat gas	\$2.61 – \$2.93	Bearish	\$2.747 (revised, -0.40%)
Gold	\$3,991 – \$4,139	Bearish	\$4,107.00 (revised) — traded \$4,170.70 through the top, closed back inside
Silver	\$55 – \$60	Bearish	\$57.786 — backed off the \$60 ceiling for a third session
Copper	\$6.19 – \$6.59	Bullish	\$6.4655 (revised, -0.14%) — did not rise. Still the only bullish-TREND metal
VIX	15.77 – 20.56	Bearish	15.99 — DOWNGRADED from Bullish; close 0.22 off the FLOOR; day low 15.82
HY credit (HYG)	78.97 – 79.76	◆ Neutral	79.48 — UPGRADED from Bearish; fourth flip in five sessions
IG credit (LQD)	105.7 – 107.3	Bearish	106.25 — sitting on its 52-week low of 106.00
Tech (XLK)	\$165 – \$181	Bearish	175.35 — TRADE \$180 / TREND \$176: high 178.62, failed both
Health Care (XLV)	\$159 – \$168	Bullish	162.55 (-0.59%) — Keith bought the down day
Real Estate (XLRE)	\$44.99 – \$46.40	Bullish	45.07 (-0.51%), near the floor. Also bought

Ranges are from Friday's Early Look "Crash, Bounce, Then?" (Keith McCullough, 07:38 EDT), published off Thursday's close — they framed the session just traded. **ONE broke: the US 10Y yield.** Everything else held, including the dollar floor by 0.04 and the VIX floor by 0.05 on the day's low. Signal changes vs Thursday: VIX Bullish → BEARISH; HYG Bearish → NEUTRAL. Friday's Early Look did not publish a Utilities (XLU) range, nor USD/JPY, Brent, Nikkei, Kospi, Shanghai or DAX. **No Early Look publishes on Saturday or Sunday.** Revised commodity closes are this brief's corrections and do not change any signal. **Note on colour in this table:** the TREND column carries Hedgeye's own signal — bullish means the price trends higher — so a bullish TREND on the 10Y yield or the dollar is a direction call, not a risk-positive one. The colour key in section 1 applies only to that table.

Also on the desk — what Keith actually did (Friday, carried forward)

- ▲ **NEW LONG: the US dollar.** Initiated on an immediate-term oversold signal near the low end of the Risk Range, with **UUP added to the long side**. The mechanism he described is worth keeping: the dollar first rose because leveraged funds were forced to raise cash as equities fell; when that forced deleveraging stopped, the dollar reversed hard enough to trigger the buy. Bullish TREND, not yet bullish TRADE.
- ▼ **NEW SHORTS: lithium, and Hedge Fund VIP (GVIP).** Lithium sourced through the Alpha Code screen "rather than through a fundamental narrative or Wall Street analyst recommendation." GVIP — the most widely-held hedge fund longs — added to the short side at 10:35 EDT; Wheat (WEAT) removed from the long side. **GVIP closed -0.64% on a +0.70% S&P day.**
- ▲ **BOUGHT on weakness: XLRE and XLV.** Both fell on Friday and both made money through the monthly drawdown, which is precisely why he added. Also long equal-weight S&P (RSP), Brazil (EWZ, added materially toward the top of his sizing range), New Zealand (ENZL) and the Philippines (EPHE).
- ▼ **BEARISH: Bitcoin versus the dollar.** His preferred negative-correlation trade to the new dollar long. BTC broke its immediate-term TRADE level near \$64,000 and is below both TRADE and TREND — "quite bearish." It has spent the whole weekend below \$63,000. Friday's Crypto Quant: "BTC (-1.4%), And Then There Were None (Again)... ETH=BEARISH, COIN 2Q Miss, 'The Quietest Tape'."
- **The rest of the desk.** MOMO Tracker (08:34 EDT): "Mag7 (+2%), MSFT=BULLISH, AMZN=NEUTRAL, Crash → Oversold → Bounce → Then?" Chart of the Day: "The Bigger The Crash, The More Deceptive The Bounce." Portfolio Solutions ETF re-rank top movers: XLV (+12), RSP (+9), AAAU (+6) — health care, equal weight and gold. Signal Strength Stocks: 66 names, 4 added (TRU, EXPGY, LH, UL), 4 removed. Exited all European positions and Utilities before European markets moved higher.

NAME	LAST	DAY	CAP	READ
Amazon (AMZN)	\$271.58	▲ +15.32%	\$2.92T	Top S&P 500 gainer and the biggest Mag7 move of the week. AWS +37% to \$42.2bn — fastest in 15 quarters. Capex to ~\$220bn
Alphabet (GOOGL)	\$356.13	▲ +6.73%	\$4.36T	Google Cloud revenue +82%. The AI-monetisation bid found it two days after it was being sold as a safe harbour
Meta (META)	\$556.71	▲ +3.28%	\$1.42T	A bounce, not a repair. Still ~30% below the 52-week high of \$796.25 after Wednesday's -7.95%
Microsoft (MSFT)	\$464.72	▲ +3.02%	\$3.45T	Extended Thursday's +15.5%. Up more than 20% in July — its best month since October 2007. Azure past \$100bn annual revenue
Nvidia (NVDA)	\$200.75	▲ +2.93%	\$4.86T	Back over \$200 and the world's largest company again. Participated without leading, third straight session
Tesla (TSLA)	\$311.21	▲ +0.76%	\$1.23T	Held \$300 for a third day. Still the Mag7 laggard year-to-date with no catalyst of its own
Apple (AAPL)	\$308.91	▼ -7.35%	\$4.54T	WORST Mag7 day. Services and China both short; September quarter guided light on supply constraints and higher memory costs. Tim Cook's final earnings call as CEO

Prices are Friday 31 July official cash closes, re-verified against Yahoo Finance at 07:15 GMT+8 Sunday and unchanged from Saturday's edition to the cent. Six of seven rose. The four hyperscalers — Amazon, Microsoft, Alphabet and Meta — have collectively guided to \$720–745bn of 2026 capital expenditure, and Bloomberg puts Big Tech's total outstanding AI spending commitments at roughly \$2 trillion.

6 Positioning & options

- **The intraday reversal is still the whole day.** Micron traded \$930.88 and closed \$823.03 — an 11.6% round trip inside one session, finishing -5.90%. AMD: high \$515.62, close \$476.15. Intel: high \$97.90, close \$90.20. SMH: high \$561.44, close \$540.53. EWY: high \$166.04, close \$157.10, -2.55%. The S&P printed 7,399.83 at the low — below Thursday's close — before finishing 7,489.72. Two-way, and heavy.
- **Equal weight had a historically bad relative day, and Hedgeye has now put a number on it.** RSP closed 215.01, -0.17%, against the cap-weighted S&P +0.70% — 87 basis points of underperformance in a single session. The written weekly note calls it the **third-largest SPX-versus-equal-weight return spread on record**, and adds the mechanism: **semis drove more than 30% of the index-level gain while over half of SPX constituents closed red**. Keith remains long RSP.
- **Negative gamma is now on the record.** The Macro Week Summary states plainly that SPX "remains in negative-gamma territory" and that bond-market vol (MOVE) flags a rates situation that only gets more volatile. Negative gamma amplifies declines and produces sharp countertrend rebounds — which describes Thursday and Friday exactly, in that order.
- **The bounce math is unforgiving.** High Beta Momentum rebounded roughly 14% across Thursday and Friday and remains approximately 60% below its peak — requiring about a 150% gain to recover. Korea rose 17.91% in a day inside a month it fell 22.19%, and is still around 28–30% below its 52-week high of 9,385.59. A very large percentage bounce off a very low base is arithmetic, not a signal.
- **Month-end is the risk, not the relief — and it starts tomorrow.** Vol-control and systematic funds can begin selling after month-end; "the first week after month-end" is the one Keith flagged. VIX 15.99 with a bearish signal, a lowered band and a gauge reading in the Investable Bucket is the cheapest insurance has been in three weeks, going into the densest macro calendar since the FOMC.
- **Retail never got bullish, which is not the contrarian comfort it looks like.** AAll bearishness was 42.1% in the week to Wednesday — a 25th consecutive week above the 31.0% historical average, the longest run since before the Iran war began in February. Bulls at 31.0% remain below the 37.5% average for a second week. Sentiment has been pessimistic through both the crash and the bounce; it is not a timing tool here.
- **And the year's largest blow-up is confirmed and finished.** Leopold Aschenbrenner's Situational Awareness — \$45bn at the start of July — was margin-called into liquidating its entire public book. JPMorgan told clients the deleveraging in tech, semis and memory "has advanced faster than we had previously anticipated" with "more limited room for any further deleveraging." That is why the crash stopped. It is not why it would restart.

7 Sector rotation — leaders & laggards (Fri)

- ▲ **Leaders.** Consumer Cyclical +4.94% (Amazon alone), Communication Services +3.99% (Alphabet), Energy +0.95% with XLE +1.00%, Industrials +0.39%, Financial Services +0.37%. Single names: Replimune +133% (FDA advisory committee voted 10–3 for RP1 in advanced melanoma; **decision due today, 2 August**), IES Holdings +30.27% to \$744.54, AXT +28.74%, Integer Holdings +20.18%, Ambarella +16.08%, Amazon +15.32%, Alphabet +6.73%, Chevron +2.35%. The refiners kept making all-time highs — PBF Energy, Delek US, Par Pacific and HF Sinclair all closed at records on Thursday, PBF up 170% year-to-date.
- ▼ **Laggards.** Healthcare -0.55% (worst), Utilities -0.37%, Consumer Defensive -0.27%, Technology -0.15% (XLK itself -0.22%). Single names: Roblox -26.85% to \$35.60, Veracyte -22.52%, Universal Music -23% and halted in Amsterdam with Vivendi -17.8%, Reddit -20.99% to \$140.67 — its worst day on record — Alignment Healthcare -20.20%, MasTec -18.91%

to \$263.10, GoDaddy -10.9%, Coinbase -10.59%, Novo Nordisk -8.78%, Apple -7.35%, NXP -6.53%, Micron -5.90%, SpaceX -3.41% to a record low.

- ◆ **Rotation read, with the commodity correction applied.** Two sectors did 100% of the work and they were the two that own Amazon and Alphabet. Strip those out and Friday was a down day: Technology, Healthcare, Consumer Defensive and Utilities all fell, the Russell fell, equal weight fell, the intraday low was below Thursday's close — and now we know **every metal fell and crude closed a third as strong as first reported**. Energy's +0.95% was earnings (Chevron's \$12bn quarter), not the barrel. Wednesday the leadership broke; Thursday the damaged names squeezed; Friday the squeeze was sold and two earnings winners carried the tape. Three sessions, three different explanations for the index level.

8 Forward — the week ahead

- **Markets are shut for one more session.** CME Globex reopens Sunday 18:00 EDT — **06:00 GMT+8 Monday**. Friday's settled futures: ES 7,519.25 (+0.63%), NQ 28,404.25 (+0.59%). Treasury futures closed on the lows, the long bond contract -0.97%. The only thing trading this weekend is crypto: **Bitcoin ~\$62,772 (-0.09% on 24h), Ethereum ~\$1,846 (-0.80%), Solana \$71.95, XRP \$1.0607, BNB \$575.23 (-1.94%)**. Bitcoin is below both TRADE and TREND and 42.9% lower than a year ago; its 52-week range is \$57,748–\$126,198.

DAY (GMT+8)	KEY EVENTS
Mon 3 Aug	★ Asia reopens and has to price the fact that New York did not confirm Friday's melt-up. Kospi 6,595.45 after a record +17.91% day and a -22.19% month; Taiwan 43,119.75 after +7.98%; Nikkei 64,362.02 after +4.03% — all into a US tape that faded them, with EWY -2.55% as the only real-time mark. ★ US S&P Manufacturing PMI 21:45, ISM Manufacturing PMI 22:00 (prior 53.3), June construction spending. China Caixin manufacturing PMI, after the official gauge unexpectedly contracted to 49.2. ★ Palantir reports (after the US close). Also Pfizer, BP, Energy Transfer.
Tue 4 Aug	★ SpaceX (SPCX) reports its first quarterly results as a public company, after the close — into a record-low share price, a -36% month and more than \$1.2trn of market value erased from the 16 June high of \$225.64. This is also the event that starts the lock-up clock: 20% of frozen shares — up to ~\$911.5m — become sellable on Thursday 6 August , with a further 10% unlocking if the stock climbs 30% above the \$135 IPO price. The single most binary event of the week for the new-issue complex. ★ AMD reports after the close — the name that traded \$515.62 and closed \$476.15 on Friday. ★ US trade balance 20:30, JOLTS job openings 22:00 , API crude stocks 04:30. McDonald's before the open.
Wed 5 Aug	ADP employment change 20:15 , S&P Global Services PMI 21:45, ISM Non-Manufacturing PMI 22:00 , China Caixin services PMI. Eli Lilly and Walt Disney report before the open.
Thu 6 Aug	★ SpaceX lock-up expiry — the first big unlock lands two full trading days after earnings. Weekly jobless claims 20:30.
Fri 7 Aug	★ US July employment report, 20:30 . The first hard labour print since three FOMC members dissented in favour of a hike on 29 July, and the first one that lands on a 30-year yield at 5.28%. See Data-confidence — this brief carries no consensus figure , because the 5.4% unemployment-rate consensus quoted on Saturday could not be re-verified this weekend and conflicts with reporting of a 4.2% June rate.
Watch	Whether the first week after month-end brings the vol-control and systematic selling Keith flagged. Whether the 10-year, having closed above a lowered 4.71% ceiling, keeps going — the 5Y, 10Y and 30Y are all at or on their 52-week highs. Whether the US–Japan yen operation is repeated or acknowledged. Hormuz : traffic is back to only 30–35% of pre-war levels, an LNG carrier was hit on Saturday, and Trump has offered no timeline for reopening — against OPEC+ raising August production targets . And the structural one: Fed Chair Kevin Warsh has raised reducing the number of FOMC meetings from eight per year, with a decision possible before the mid-September meeting.

Hedgeye's own "Coming Up This Week" panel in the Macro Week Summary lists, in ET: Mon 9:45am S&P Manufacturing PMI and 10:00am ISM Manufacturing PMI; Tue 8:30am Trade Balance, 10:00am JOLTS Job Openings, 4:30pm API Weekly Crude Oil Stock; Wed 8:15am ADP Employment Change, 8:30am S&P Global Services PMI, 10:00am ISM Non-Manufacturing PMI. Converted to GMT+8 above by adding 12 hours. **Earnings-date conflict**: Yahoo's calendar dock lists Palantir on 4 August and SpaceX on 5 August; CNBC, Reuters and the company's own release date have Palantir on Monday 3 August and SpaceX on Tuesday 4 August. This brief uses the latter. Verify before positioning around either.

9 Corporate news

- **Amazon: the quarter that carried the index.** +15.32% to \$271.58, adding roughly \$390bn of market value, on AWS +37% year-over-year to \$42.2bn — the fastest growth in 15 quarters — with the AI business and Amazon's own silicon each running above a \$25bn annualised rate. The cost: 2026 capex raised to roughly \$220bn from \$200bn on higher memory prices, and trailing-twelve-month free cash flow now an outflow. The market has twice in 48 hours chosen the cloud growth rate over the cash flow.
- **Apple: the other side of the same shortage.** -7.35% to \$308.91, the worst Mag7 day and roughly \$360bn of market value, after Services revenue and China both came in short and the September quarter was guided light on "supply constraints." Tim Cook, in his final earnings call as CEO, warned directly on memory costs. Apple is the cleanest large-cap short expression of the memory squeeze and has now said so on the record twice.
- **Strategy (MSTR): an \$8.22bn quarterly loss, and the buying has stopped.** Reported Thursday — net loss \$8.22bn for Q2, of which an **\$8.32bn unrealised loss on bitcoin holdings**. The stock rose 4.4% anyway, because the loss is an accounting entry rather than a cash outflow. The number that matters more: **Strategy has gone five weeks without a bitcoin purchase**, its longest break, with the last buy 520 BTC for \$35m in the week of 15–21 June. It raised \$8.41bn through at-the-market stock sales in the quarter and put it into a dollar reserve to fund preferred dividends and debt, not into coin. The largest structural bid in bitcoin has been switched off, and MSTR closed -4.56% on Friday.

- **Chevron and Exxon, on a war quarter.** Chevron net income \$12bn, up roughly 400% from \$2.5bn a year ago; adjusted EPS \$6.06, fifty cents ahead. CEO Mike Wirth: "We're kind of firing on all cylinders, which is good, because the world needs it." Shares +2.35%. Exxon also beat on surging crude but closed -0.97%, having been down more than 2% intraday — the market is paying for refining and downstream leverage, not the integrated majors. With WTI's settle revised down to +1.29%, that read looks stronger, not weaker.
- **Reddit: the first data point on the other AI trade.** -20.99% to \$140.67, the worst day in the company's history, because it did not announce new AI data-licensing deals and its US daily active user metric disappointed. Reddit was the first pure-play "our data is worth something to model builders" story. The first time that revenue line failed to grow, the multiple went with it. Watch which other content and data businesses are valued on the same assumption.
- **Deals, and one very large one.** Blackstone agreed to acquire HSBC's A\$36bn (\$25bn) Australian home and personal loan portfolio — Blackstone calls it the largest home loan portfolio transaction globally; HSBC's Hong Kong shares hit an intraday record. Alimentation Couche-Tard will buy Poland's Żabka at about \$8.6bn after Seven & i could not agree terms. BP announced it will sell its entire North Sea business — roughly 1,100 employees, two central North Sea hubs and three sites west of Shetland — and reports Monday.
- **And the rest of the tape.** Novo Nordisk -8.78% after ziltivekimab failed to cut major adverse cardiovascular events. Universal Music -23% and halted, dragging Vivendi -17.8%. Coinbase -10.59% on a third consecutive quarterly loss. Moderna cut its 2026 R&D budget to \$2.9bn. Roblox -26.85%. On the other side, Replimune +133% after an FDA advisory committee backed RP1 by 10-3, with the decision due today. The Trump administration added six chipmakers to the US government's equity portfolio, and Elon Musk launched X Money with an X-branded Visa card.

10 Macro data

- **Labour costs ran hot, and still lost to inflation.** The Q2 employment cost index rose 0.9% against a 0.8% consensus, and 3.4% year-over-year — just below the 3.5% CPI. Compensation is accelerating enough to worry a committee that already had three dissents for a hike, and not enough to stop real wages falling. The front end traded exactly that: the 2-year rose 3.3bp while the 5-year rose 8.5bp.
- **Consumer sentiment rebounded off a very low base.** The final University of Michigan reading for July was 55.2, up 11.5% on the month and ahead of the 54.0 consensus — still 10.5% below a year ago. One-year inflation expectations fell 0.4pp to 4.2%, the lowest since March; the five-year measure was unchanged at 3.3%. Survey director Joanne Hsu: "sentiment is 11% below a year ago, reflecting a generally somber view of the economy amid five years of elevated inflation and persistent high prices." The improvement happened despite higher pump prices, which is unusual.
- **China went backwards.** The official manufacturing PMI fell to 49.2 in July from 50.3, against a 50.0 consensus — the first contraction since February — as export front-running unwound. The second-largest economy is losing its manufacturing impulse in the same month oil rose more than 20%. Caixin manufacturing lands Monday. The Shanghai Composite closed +0.72% and the CSI 300 +0.85% anyway.
- **Japan held, and warned.** The BoJ kept its policy rate at 1.00% on an 8-1 vote, Hajime Takata dissenting for 1.25%. The Outlook Report said core inflation will accelerate "clearly above" 2% from the second half of FY2026 — citing wage pass-through, crude and the weak yen — before falling back as oil declines. Japan's July core CPI was 1.6%. Bloomberg read Ueda as mildly hawkish; the market read September as live. All of that came hours after the second currency operation of the week.
- **Tariffs are still feeding the inflation side of the Quad.** The administration's latest round — **10% to 12.5% on 60 trade partners under Section 301** — was cited by Warsh at the July press conference as one of the "economic shocks" the committee weighed. It is the policy input underneath Hedgeye's call for an August inflation re-acceleration that prints in September.
- **And the institution itself is changing.** The New York Times reported Friday that Warsh raised the possibility of reducing FOMC policy meetings from the current eight per year, with a decision possible before the mid-September meeting. Read it alongside the 29 July hold with three hawkish dissents and no forward guidance. Fewer meetings and less guidance means more of the adjustment happens in the bond market between meetings — which is precisely what a 5.28% long bond has been doing.

11 Geopolitics

- ▼ **NEW — a Qatari LNG carrier was struck at the mouth of Hormuz.** Bloomberg, Saturday 1 August: a tanker carrying Qatari LNG, identified by security consultancies Vanguard Tech and Marisks as the **Gaslog Shanghai**, was hit by an unidentified projectile **11 nautical miles northeast of Lima, Oman**, near the entrance to the Strait. UKMTO reported engine room damage leaving the vessel unable to manoeuvre. No casualties and no reported environmental impact. This is the first strike on the LNG trade specifically, and Qatar supplies roughly a fifth of the world's LNG through that water.
- ▼ **Hormuz is effectively closed, and the numbers say so.** Around 10 ships transited on 23 July against a normal ~88 per day. Commonwealth Bank estimated Friday that transit had recovered to 30-35% of pre-war levels and that 50-60% would be enough to reassert oversupply — which is why crude was down 1.6% in Asian hours before the reversal. Then Fars, the IRGC-linked agency, said the Revolutionary Guards had stopped two tankers and turned four more around. CNBC could not independently verify it.

- ▼ **Iran hit two Gulf states, and named the targets.** Iran's army said Friday it had struck aircraft shelters, satellite communication systems and equipment storage used by the US military at Kuwait's **Ahmad al-Jaber Air Base** with drones, and claimed a Thursday attack on US facilities at Bahrain's **Sheikh Isa Air Base**. This followed a US "heavy wave" on Wednesday against dozens of IRGC targets nationwide. The exchange is openly reciprocal and the Gulf states are inside it.
- ▼ **The maritime war is no longer about the chokepoint.** Egypt confirmed a drone struck two ships at Damietta on the Mediterranean — the first attack on Egyptian soil since the war began in late February, and unclaimed. Verisk Maplecroft's Hamish Kinnear: the strike signals the Suez Canal is also a potential target, and attacks on shipping this year now span "the Caspian Sea, Black Sea, Mediterranean Sea, Red Sea, Persian Gulf, and the Indian Ocean... a new era of maritime risk." Nine vessels have been struck at or heading to the Caspian Pipeline Consortium terminal in July alone — a monthly record since 2022.
- ◆ **Diplomacy is stalled, not dead.** The US paused new strikes late in July to let talks develop; Iran's foreign ministry responded that Tehran is not currently negotiating and "will never allow the United States to determine the timing of war and peace." There is no ceasefire and no timeline for reopening the Strait.
- **The read.** Compare Thursday, when the same market shrugged off fresh US strikes and Brent fell 1.9%, with Friday, when an unverified tanker report added 7% to WTI intraday — and then with the settle, which gave \$2.20 of it back. With Saturday's LNG strike now on the tape and **OPEC+ raising August production targets** into it, both the supply-risk and the supply-growth arguments got louder in the same 48 hours. That is not a market with a settled risk premium. For anyone with energy exposure the position size is the decision; the direction is not tradeable on news.

12 Asia — Friday's session, and the Monday setup

INDEX	FRI 31 JUL CLOSE	READ
Kospi (Korea)	▲ 6,595.45 (+17.91%)	THE BEST DAY IN THE INDEX'S HISTORY — +1,001.89 points, ranged 5,629.76–6,630.77. SK Hynix +29.95% and Samsung +26.81% on the final prints, both larger than the +25%/+20% carried Saturday. And the month: -22.19%, the worst since 1997 . Still ~29% below the 52-week high of 9,385.59
Kosdaq (Korea)	▲ 719.76 (+11.63%)	The small-cap leg confirmed it. LG Innotek +11.2%, Seoul Semiconductor +7.8%
Taiwan (TWII)	▲ 43,119.75 (+7.98%)	Five sessions reversed in one. Ranged 41,610.41–43,214.36; closed at the high
Nikkei 225	▲ 64,362.02 (+4.03%)	Ranged 61,948.23–65,364.73. Advantest +18%, Disco +13%, Lasertec +12%, Renesas +10%, Tokyo Electron +9%, SoftBank +9% — into a BoJ hold and a second currency operation
Shenzhen	▲ 13,578.93 (+2.21%)	Outperformed Shanghai on the tech read-through
Shanghai	▲ 3,832.26 (+0.72%)	CSI 300 +0.85% to 4,588.20 — despite the official manufacturing PMI contracting to 49.2
Sensex	▲ 78,094.64 (+0.21%)	Fourth straight gain. India stayed the region's low-beta leg through the whole episode
Hang Seng	▲ 25,884.43 (+0.10%)	Fourth green day and the least excited market in Asia. Ranged 25,622.92–25,917.20
S&P/ASX 200	▲ 8,976.80 (+0.10%)	Barely participated; faded from 9,059.80 intraday as Brent slipped in Asian hours
S&P/NZX 50	▼ 13,699.28 (-0.46%)	Closed on the low. Hedgeye is long New Zealand (ENZL) off three-month highs
Straits Times	▼ 5,628.50 (-0.79%)	Second down day, now 1.5% off last week's 52-week high

Read. Asia traded Friday on Thursday's New York close — a +2.78% Nasdaq, a +18.4% Micron and a Samsung supply warning — and priced it in full. It did not get to see what happened next. The US then distributed the entire move, and **EWY closed -2.55% after trading up 5.7%**. That -2.55% is Monday's gap risk for Seoul in a single number. Set against it: Korea and Taiwan are still 28–30% below their highs, the forced seller is finished, JPMorgan says there is "more limited room for any further deleveraging," and the memory supply story Samsung told is unchanged. Both things are true. But a record daily gain inside a -22.19% month is a market-structure event — a 40% drawdown, a record short base and a trading halt — and market-structure events do not compound. All Asian cash markets are closed until Monday 3 August.

13 AI watch

- **The capex number is now the whole debate, and it got bigger.** Across this week's reports the four hyperscalers guided to a combined **\$720–745bn of 2026 capital expenditure**, and Bloomberg puts Big Tech's total outstanding AI spending commitments at roughly **\$2 trillion**. Two weeks ago the market was selling these names on fear that AI demand was rolling over. It is not the demand that is in question now. It is who funds the depreciation, and at what cost of capital — with the 10-year at 4.745% and the 30-year at 5.28%.
- **The revenue side keeps refusing to decelerate.** Azure past \$100bn of annual revenue on 43% constant-currency growth; AWS +37% and accelerating to its fastest in 15 quarters; Google Cloud +82%. Three different clouds, three different starting points, all accelerating in the same quarter. Whatever else is true about this cycle, the enterprise spend showing up in reported revenue is real and compounding.
- **But the market has separated the sellers of AI from the buyers of memory — twice in two days.** Thursday: memory producers +18% to +22% on a Samsung shortage warning. Friday: Micron -5.90%, AMD -1.90%, SMH round-tripping \$21, while Amazon and Alphabet — which pay for that memory — rose 15% and 7%. Apple, which pays for it and cannot pass it on quickly, fell 7.35% naming exactly that cost. The shortage is simultaneously a three-year pricing regime and a margin problem, and the market refuses to hold both positions on the same day.

- **The circularity question is now being asked in Seoul, not just New York.** Korean strategists writing into Monday flag concern that Nvidia's AI infrastructure arrangements — reported at more than \$750bn in aggregate — involve "circular financing" that may be distorting measured demand. That is the same objection that took the Nasdaq-100 down 6.95% in July, arriving in the market that just posted its best day on record for the opposite reason. Whichever way Monday opens, the two halves of Korea's week cannot both be right.
- **Reddit remains the first data point on the other AI trade.** -20.99%, the worst day in its history, for the *absence* of new AI data-licensing agreements. The "our corpus is a strategic asset" thesis supports valuations across content, forums, publishing and market data. Friday priced what happens when those deals are one-time rather than recurring. Small company, large signal.
- **And the cautionary tale is closed out.** A \$45bn fund run by a 24-year-old former OpenAI researcher, holding the most intellectually fashionable position in the market — levered long AI hardware, short the enterprise software it was supposed to disrupt — liquidated in full after a margin call. It was right about the technology. The price path killed it anyway. Friday's Early Look put it better: "Conviction and attachment are not the same thing, and confusing them is where most of the real risk tends to live."

14 Beyond the markets

- **A \$75m theft that never touched a device — and it is the weekend's biggest crypto story.** A firmware change made on **1 March 2021** caused certain Coldcard hardware wallets to silently fall back to a software random number generator instead of the hardware one, making supposedly unguessable seed phrases computationally enumerable for five years. On the last night of July the attacker swept **594 BTC (~\$38.3m) from around 500 wallets in 25 minutes**. On Saturday Galaxy Research identified a second wave: the total is now **1,158.66 BTC, roughly \$75.1m, from 2,673 addresses**, and every coin came from a wallet created after 17 March 2021. None of it has moved — all of it sits unspent across seven attacker-controlled addresses. Changpeng Zhao's public response: "Nothing is 100%." Self-custody was the one part of the bitcoin thesis that was supposed to be free of counterparty risk; it turns out it had a vendor.
- **Two governments intervened, and one of them was not Japan.** If Bloomberg is right that US authorities bought yen alongside Tokyo on Friday, this stops being a Japanese liquidity operation and becomes a joint policy statement about the dollar. Reserves can buy a level for a day; only the rate differential holds one. Tokyo has now spent the former twice while declining to change the latter — and the September meeting is where that gets resolved, now with a second participant in the room.
- **The Fed is deliberately becoming harder to read.** No forward guidance, three dissents in the hawkish direction, and a proposal from the Chair to meet less often. There is a coherent case for it — central banks that speak less force markets to price fundamentals rather than communication. There is also a cost, and Friday showed it: with nothing to trade off, the market traded oil, and yields followed crude to a 19-year high in the long bond. Less information does not reduce volatility. It relocates it.
- **A 17.91% day is not good news.** The Kospi's largest single-session gain in its history happened because two stocks hit trading halts inside an index that had fallen roughly 40% from its high and 22.19% in the month — its worst since 1997. The list of markets that have posted their biggest-ever daily gains is not a list of markets that were healthy at the time.
- **And July is in the record books, twice over.** In the same 22 sessions: the worst month in the history of Goldman's High Beta Momentum basket; the worst month for semiconductors since 2008; the worst month for the Nasdaq-100 since March 2025; the worst month for the Kospi since 1997; the largest single-day market-value gain by any company ever; the largest single-day gain in the history of the Korean stock market; a \$45bn fund liquidated; a 19-year high in the 30-year Treasury; a 40-year low in the yen and two interventions; a Gulf state entering a shooting war; the first attack on Egyptian soil of the conflict — and a Dow Jones Industrial Average that closed **up 0.32%, its fourth consecutive winning month**. If you owned the index and read nothing, July was uneventful. Almost nobody owned the index.

15 Appendix — stock cards

Names in focus plus top global names — last + day · market cap · next key date · one-line read. Prices are Friday 31 July cash closes, re-verified Sunday 07:15 GMT+8. No charts.

US — the two that moved the index

Amazon (AMZN)

\$271.58 ▲ +15.32%

Cap \$2.92T · Next: Reported 30 Jul

AWS +37% to \$42.2bn, fastest in 15 quarters. Added ~\$390bn of value. Capex to ~\$220bn on memory costs.

Apple (AAPL)

\$308.91 ▼ -7.35%

Cap \$4.54T · Next: Reported 30 Jul

Services and China short; Sept quarter guided light on supply constraints. Cook's final earnings call.

US — mega-caps

Alphabet (GOOGL) \$356.13 ▲ +6.73% Cap \$4.36T · Next: Reported 22 Jul Google Cloud +82%. Bid on AI monetisation two days after being sold as a defensive.	Microsoft (MSFT) \$464.72 ▲ +3.02% Cap \$3.45T · Next: Reported 29 Jul Up >20% in July — best month since October 2007. Azure past \$100bn annual revenue.
Nvidia (NVDA) \$200.75 ▲ +2.93% Cap \$4.86T · Next: Reports late Aug Back over \$200 and the largest company on earth. Participating, not leading, for a third session.	Meta (META) \$556.71 ▲ +3.28% Cap \$1.42T · Next: Reported 29 Jul A bounce off a historic losing streak. Still ~30% below the 52-week high of \$796.25.
Tesla (TSLA) \$311.21 ▲ +0.76% Cap \$1.23T · Next: Reported 22 Jul Held \$300 for a third session. The Mag7 laggard, with no catalyst of its own.	Broadcom (AVGO) \$389.28 ▲ +0.37% Cap \$1.85T · Next: Reports early Sep Barely moved through the whole two-day round trip. Custom silicon sat this one out.

The memory complex — Friday's reversal

Micron (MU) \$823.03 ▼ -5.90% Cap \$929.5B · Next: Reports late Sep Traded \$930.88 to \$818.00. Gave back a third of Thursday's +18.4% and then some. The tell.	AMD \$476.15 ▼ -1.90% Cap \$776.4B · Next: Reports 4 Aug High \$515.62, close \$476.15. Reports Tuesday into a tape that has changed twice this week.
Intel (INTC) \$90.20 ▼ -1.02% Cap \$455.0B · Next: Reported 24 Jul High \$97.90, close \$90.20. Most-active again. Six chipmakers added to the US government portfolio.	Qualcomm (QCOM) \$147.61 ▼ -2.63% Cap \$155.0B · Next: Reported 29 Jul Third down day since naming the memory crunch. First to flag it, still paying for it.

Asia — the record, and the currency

Kospi (Korea) 6,595.45 ▲ +17.91% Month -22.19% · Next: Reopens Mon 3 Aug Best day in the index's history — inside its worst month since 1997. SK Hynix +29.95%, Samsung +26.81%.	EWY (Korea ETF) \$157.10 ▼ -2.55% — · Next: Reopens Mon 3 Aug Traded \$166.04 and closed red. The US-listed mark on Korea's record day — and Monday's gap risk.
Nikkei 225 64,362.02 ▲ +4.03% — · Next: BoJ next: 18 Sep* Semis led. Now faces a 3.3% weekly yen appreciation and a US session that faded the whole move.	USD/JPY 157.40 ▼ -1.38% 52wk low 163.98 · Next: BoJ held 31 Jul Second operation in 48 hours, now reported as joint US–Japan. -3.3% on the week, most since July 2024.
Taiwan (TWII) 43,119.75 ▲ +7.98% — · Next: Reopens Mon 3 Aug Closed at the high of the day. Five sessions of damage reversed in one, on a foreign market's cue.	Hang Seng 25,884.43 ▲ +0.10% — · Next: Reopens Mon 3 Aug Fourth green day and the calmest index in the region through the entire episode.

Energy, crypto & the rest

WTI crude (front) \$84.67 ▲ +1.29% Range \$81.06–\$86.87 · Next: Globex 06:00 Mon REVISED settle. A 7.2% intraday swing that half-retraced. Hedgeye band \$79.27–\$92.90, bullish TREND.	Chevron (CVX) \$196.83 ▲ +2.35% Cap \$392.0B · Next: Reported 31 Jul Net income \$12bn, ~+400% y/y; adj EPS \$6.06 vs \$5.56. Wirth: "firing on all cylinders."
SpaceX (SPCX) \$108.37 ▼ -3.41% Cap \$1.43T · Next: Reports 4 Aug Record low. -36% in a month. First earnings Tuesday; ~911.5m shares unlock Thursday 6 Aug.	Reddit (RDDT) \$140.67 ▼ -20.99% Cap \$27.1B · Next: Reported 30 Jul Worst day on record. No new AI licensing deals and a US daily-user miss. First crack in the data-asset trade.
Bitcoin (BTC) \$62,772 ▼ -0.09% 24h Cap \$1.26T · Next: Live 07:10 Sun Below TRADE and TREND. \$75m Coldcard exploit over the weekend; Strategy has not bought for five weeks. Data-confidence

CROSS-CHECKS PASSED: every equity figure in this brief was independently re-pulled this morning and ties **exactly** to Saturday's edition. Indices: S&P 7,489.72 (+52.09, +0.70%), Dow 52,485.03 (+276.97, +0.53%), Nasdaq 25,373.85 (+251.68, +1.00%), Russell 2,931.34 (–14.76, –0.50%), VIX 15.99 (–1.10, –6.44%). All seven Mag7 closes tie to the cent, as do EWY 157.10, SMH 540.53, XLK 175.35, HYG 79.48, LQD 106.25, XLV 162.55, XLRE 45.07, RSP 215.01, CRAK 55.24, GVP1 167.99 and XLE 59.55. Every Asian index ties: Nikkei 64,362.02, Kospi 6,595.45, Taiwan 43,119.75, Hang Seng 25,884.43, Shanghai 3,832.26, ASX 8,976.80, Sensex 78,094.64. Yields tie: 10Y 4.745% (+8.2bp), 30Y 5.28% (+7bp), 5Y 4.46% (+8.5bp).

CORRECTIONS TO THE 1 AUGUST EDITION — READ THIS: five marks changed when Yahoo settled them, and all five reconcile off the same Thursday base carried in the 31 July edition, so these are settlement revisions and not a contract roll. **(1) WTI: \$84.67, +1.08 / +1.29%** — not \$86.80 / +3.84%. Day range \$81.06–\$86.87. Thursday 83.59 + 1.08 = 84.67. **(2) Copper: \$6.4655, –0.0090 / –0.14%** — not \$6.51 / +0.51%. This is a **sign flip**: the claim in the 1 August edition that copper was "the exception" and the only metal to rise is withdrawn. **(3) Gold: \$4,107.00, –53.60 / –1.29%** — not \$4,098.60 / –1.49%. Range \$4,076.40–\$4,170.70, so it traded above the \$4,139 ceiling intraday. **(4) Natural gas: \$2.747, –0.011 / –0.40%** — not \$2.792 / +1.23%, another sign flip. **(5) Futures: ES 7,519.25 (+0.63%)** not 7,503.50 (+0.41%), **NQ 28,404.25 (+0.59%)** not 28,287.00 (+0.17%). Silver (\$57.786, –2.09%) and Brent (\$90.12, +1.22%) are unchanged, though the Brent quote is a 14:28 EDT print on 1,016 lots and should be treated as thin.

KNOWN CONFLICTS: (1) **The 7 August unemployment-rate consensus.** The 1 August edition carried 5.4% from a single source. That could not be re-verified this weekend, and search results this morning surface a reported June 2026 unemployment rate of 4.2% on payrolls of +57,000, which is irreconcilable with a 5.4% July consensus. **This brief therefore carries no consensus figure for Friday's print.** Establish your own before the release. (2) **Earnings dates.** Yahoo's calendar dock lists Palantir on 4 August and SpaceX on 5 August; CNBC, Reuters and the SpaceX release itself put Palantir on Monday 3 August and SpaceX after the close on Tuesday 4 August, with the lock-up on Thursday 6 August. This brief uses the latter. (3) **DXY.** The 99.80 close is firm; the change has now been reported three different ways across three snapshots (–0.06%, –0.11%, implying Thursday closes of 99.86 and 99.91 against the 99.97 published on 31 July). Level firm, delta unstable. (4) **USD/JPY.** Yahoo's –1.38% / –2.2080 implies a prior of 159.608 against the 159.70 published on 31 July. Same issue. (5) **Korean single names.** SK Hynix +29.95% and Samsung +26.81% are TradingKey/Outlook Business closing figures; CNBC carried +25% and +20% intraday. Both are press-reported, not captured in this brief's snapshot. (6) **XLK –0.22%** is the ETF's own close; the –0.15% quoted for "Technology" is Yahoo's sector aggregate. They are different instruments.

KNOWN GAPS: Hedgeye's Macro Week Summary Notes is a two-page PDF served in a browser-native viewer that would not respond to programmatic scrolling. **Page 1 was read in full** and is the source for the Quad dashboard, the VIX gauge, the USD / Rates / Volatility commentary and the "Coming Up This Week" calendar quoted in section 4. **Page 2 was not retrieved** — from the thumbnail it contains the U.S. Monthly Quad Forecast chart, Chart of the Week, Market Insights and Recommended Research. Treat section 4 as complete on the dashboard and incomplete on the forecast detail. Hedgeye's Friday MOMO Tracker and Crypto Quant bodies are published as images and are quoted from headlines only. Sector percentages are Yahoo's own classification, not GICS S&P sector indices; Real Estate and Basic Materials were again absent from the sector board at capture time. Palladium (–2.31%) and platinum (–0.28%) are carried from the 1 August edition and were not re-verified in this morning's snapshot — given that gold, copper and nat gas all moved on settlement, treat both as provisional. USD/KRW was not captured and is worth checking independently before Monday's Seoul open. The Kospi's –22.19% July figure and the "worst since 1997" claim are press-reported (TradingKey/Outlook Business), not computed here.

TIMING & UNVERIFIED: This is a **WEEKEND edition — the second of two**. All cash and futures markets are closed; CME Globex reopens Sunday 18:00 EDT (06:00 GMT+8 Monday) and Asian cash markets on Monday 3 August. **Every equity, rate and commodity price in this brief is a Friday close and will be roughly 60 hours stale by the Asian open.** Only the crypto quotes are live. The next Hedgeye Early Look and Risk Range set publishes ~19:25–19:55 GMT+8 Monday, after which every range in section 4 is superseded; the Hedgeye feed has published nothing since 05:59 GMT+8 Saturday and was re-checked at 07:05 GMT+8 this morning. The joint US–Japan intervention is Bloomberg reporting citing unnamed sources; **Japan's MoF has not confirmed any intervention** and Mimura declined to comment. The Gaslog Shanghai strike is reported by Bloomberg from security consultancies and ship-tracking data; the projectile is unidentified and no party has claimed it. The Fars report that the IIRC stopped two tankers is IIRC-linked state media and CNBC explicitly could not verify it. The Kuwait and Bahrain strike claims are Iranian army statements via Iranian state media. Warsh's meeting-frequency proposal is New York Times reporting citing officials familiar with the discussions, not an announced Fed decision. The Coldcard second-wave total of 1,158.66 BTC is Galaxy Research's attribution and is one firm's on-chain analysis. The BoJ's next meeting date (18 September) is the conventional calendar and was not confirmed against a primary BoJ release. Brief generated ~07:30 GMT+8 Sunday off a data snapshot taken 07:05–07:20. **Verify live before acting.** This is the FULL Hedgeye edition (logged-in browser reachable).
