

DAILY NEED TO KNOW

Tuesday, 4 August 2026 · Pre-market brief for Anne Wong

Covering the **Monday 3 August 2026 US session as settled** and the Globex overnight into Tuesday. All times GMT+8 (HKT). Asian cash markets have not opened; the live prices in this brief are futures, FX and crypto captured 06:55–07:20 GMT+8 Tuesday.

Edition: **FULL** — Hedgeye logged-in edition. Monday's Early Look "Quantum Quads" is the live risk-range set until the Tuesday Early Look publishes ~19:25–19:55 GMT+8. Four ETF Pro book changes landed at 22:50 GMT+8 Monday and are carried in section 4.

1 Market snapshot — Monday's close, and where it is trading now

ASSET	LAST	CHANGE	NOTE
S&P 500	7,600.50	▲ +110.78 / +1.48%	Monday cash close. Ranged 7,504.78–7,610.04 — and closed through Hedgeye's 7,567 ceiling
Nasdaq Composite	25,913.90	▲ +540.04 / +2.13%	Ranged 25,420.35–25,967.44. Best of the majors. Still ~4.7% from the 27,190.21 June record
Dow Jones	53,178.41	▲ +693.38 / +1.32%	RECORD CLOSING HIGH — the first new high by any major US index since June
Russell 2000	2,981.91	▲ +50.57 / +1.73%	All four majors green for the first time in a week. 17pts under the 2,999 ceiling
S&P futures (ES)	7,635.50	▲ +7.25 / +0.10%	LIVE 06:57. Settled 7,628.25, +1.45%. Overnight move is a rounding error — 4,780 lots
Nasdaq-100 fut (NQ)	28,947.00	▲ +55.25 / +0.19%	LIVE 06:58. Settled 28,891.75, +1.72%. Best of a very quiet overnight complex
Dow futures (YM)	53,425.00	▲ +91.00 / +0.17%	LIVE. 518 lots traded. Effectively nothing has happened since the close
Russell futures (RTY)	2,995.10	▲ +5.80 / +0.19%	LIVE. 545 lots. Pressing the 2,999 Risk Range ceiling
US 10Y yield	4.686%	▼ -5.9 bp	Monday cash close. Back inside the 4.61–4.75% band after Friday's break of 4.71%
US 30Y yield	5.23%	▼ -4 bp	Off Friday's 19-year high of 5.28%. ZB contract dead flat overnight
US 5Y yield	4.400%	▼ -6.0 bp	Led the rally, exactly mirroring Friday when it led the sell-off
US 2Y yield	4.239%	▼ ~-2 bp	Least movement on the curve. The front end is still anchored to the Fed, not to oil
WTI crude (Sep)	\$80.15	▼ -0.19 / -0.24%	LIVE. Settled \$80.34, -5.11% — the weekend gap was not given back. Traded \$78.59 intraday
Brent crude (Oct)	\$83.70	▼ -0.07 / -0.08%	LIVE — a reliable print again, unlike Sunday. Settled \$83.77, -4.73%
Nat gas (Sep)	\$2.770	▼ -0.011 / -0.40%	LIVE. Settled \$2.781, +1.24% Monday — the one energy contract that rose
RBOB gasoline (Sep)	\$2.9635	▼ -0.0032 / -0.11%	LIVE. Settled \$2.9667, -4.74% Monday. UGA fell -5.27% and Hedgeye sold it
Gold (Dec)	\$4,109.30	▲ +18.80 / +0.46%	LIVE. Settled \$4,090.50, -0.40% Monday. Keith bought gold last week at ~\$4,101
Silver (Sep)	\$58.37	▲ +0.51 / +0.89%	LIVE. Settled \$57.86, +0.13%. Best of the metals overnight, again
Copper (Sep)	\$6.5485	▲ +0.0080 / +0.12%	LIVE. Settled \$6.5405, +1.16% Monday. Still the only bullish-TREND metal
US Dollar (DXY)	99.99	▲ +0.09%	LIVE — recaptured the 99.76 floor it broke Sunday night. Ranged 99.42–100.02
USD/JPY	157.335	▼ -0.065 / -0.04%	LIVE. Flat for a third session. The joint intervention level is simply holding

ASSET	LAST	CHANGE	NOTE
USD/KRW	1,429.0	◆ see note	LIVE. Seoul closed 1,429.8, 5.8 won weaker. Yahoo's delta disagrees — see Data-confidence
VIX	15.86	▼ -0.13 / -0.81%	Monday close. Ranged 15.54–16.30. Signal still BEARISH; floor lowered to 15.09
Bitcoin (live)	\$63,522	▲ +0.04% (24h)	07:10 GMT+8. ETH \$1,856.41 (-1.43%), SOL \$73.40 (-0.20%), XRP \$1.0743, BNB \$589.09

Colour key: ▲ up ▼ down ◆ neutral/mixed. Green/red denote whether the move is **risk-positive**, not direction — a falling yield and a falling VIX are both green. Rows marked LIVE were captured from Globex/spot at 06:55–07:20 GMT+8 Tuesday 4 August; everything else is a Monday 3 August settle or cash close. Every live futures row reconciles exactly off Monday's settle — ES 7,628.25+7.25=7,635.50, NQ 28,891.75+55.25=28,947.00, YM 53,334+91=53,425, RTY 2,989.30+5.80=2,995.10, WTI 80.34-0.19=80.15, Brent 83.77-0.07=83.70, gold 4,090.50+18.80=4,109.30, silver 57.86+0.51=58.37, nat gas 2.781-0.011=2.770, RBOB 2.9667-0.0032=2.9635. And Monday's implied settles reconcile back to Friday's: ES 7,519.25→7,628.25 (+1.45%), YM 52,635→53,334 (+1.33%), RTY 2,938.00→2,989.30 (+1.75%), WTI 84.67→80.34 (-5.11%). That last figure matches CNBC's independently reported settle to the cent, which is the strongest cross-check in this brief. Overnight volume is negligible across the board — 4,780 ES lots and 518 YM lots — so treat every LIVE equity row as an indication, not a price. Cash Treasury yield indices do not update outside US hours. Crypto changes are rolling 24-hour.

TL;DR

The de-escalation trade did in the US cash session what it flatly refused to do at the Globex reopen. **The Dow closed at a record high, 53,178.41, +693 points.** The S&P rose 1.48% to 7,600.50 — within 0.27% of its own record. The Nasdaq added 2.13%. Crude settled -5.11% at \$80.34 after trading \$78.59 intraday, and did not give the move back. On Sunday night this same headline bought the S&P a third of one percent; twenty-four hours later it bought 1.5% and a new high on the Dow.

And then it stopped. Overnight the entire complex has moved less than a fifth of one percent in either direction — ES +0.10%, NQ +0.19%, YM +0.17%, RTY +0.19%, the long bond exactly unchanged, crude -0.24%. Volumes are close to nil. The market has priced the news and is now waiting.

Iran spent Monday denying the premise of the rally. Tehran's foreign ministry said there are currently no negotiations with the United States at all — only talks with Oman about a shipping route, which it says are in their final stages. Trump called Iran's leadership "unbelievably duplicitous", insisted talks were underway, and said this was Tehran's last chance before "decapitation". Equities went up 1.5% through all of it.

The number that does not fit is ISM. July manufacturing printed 55.6 against a 54.0 consensus and a 53.3 prior — the strongest reading since May 2022 — with the employment sub-index at 52.8, expanding for the first time in thirty-three months, and new orders 56.7. That is not a slowing economy. The Atlanta Fed's GDPNow was lifted to 6.2% from 5.0%. Yields fell anyway, because oil fell harder. Every desk should notice that the growth channel and the oil channel are now pulling in opposite directions, and that oil is winning.

Hedgeye turned over four positions in one session, and every one of them cut risk-on. The tech short (XLK) and the consumer discretionary short (XLY) were covered. The dollar long (UUP) — initiated Thursday, added Friday, flagged in this brief on Sunday as the one item with a rule attached to it — was sold on Monday. So was the gasoline long (UGA), after a -5.27% day. Crude's TREND signal flipped from bullish to **BEARISH**, and the Nasdaq and XLK were both upgraded from bearish to neutral. Keith separately disclosed he bought gold last week, his first purchase in an extended period.

Dealer gamma has flipped back positive. The Macro Show said so explicitly on Monday. Last week's negative-gamma regime is what produced Thursday's crash and Friday's violent bounce; positive gamma does the opposite — dealers sell strength and buy weakness, which compresses realised moves in both directions. That is consistent with an overnight tape that has not moved at all, and it is the mechanical reason to expect less drama than the calendar deserves.

The one thing to hold on to: **the S&P closed above the top of its own Risk Range.** 7,600.50 against a 7,567 ceiling. Hedgeye's own rulebook treats an immediate-term overbought signal as a place to reduce, not to add, and the calendar into Friday's payrolls is the densest of the quarter — BP, Pfizer and Energy Transfer this morning, AMD and SpaceX's first-ever quarterly report tonight, the SpaceX lock-up Thursday, payrolls Friday, and a live-or-not-live Iran negotiation running under all of it.

2 The big picture — what it means

1. The war trade is unwinding in an orderly way, and the orderliness is the surprise. A 5% break in crude on Sunday night bought the S&P 0.34%. The same break, held for a full US session, bought it 1.48% and gave the Dow a record. Nothing about the news improved in between — if anything it deteriorated, because Iran spent Monday denying that any negotiation exists. What changed is that the market had a full session to work out the second-order consequences: lower crude means lower headline inflation, means a lower discount rate, means the AI capex cycle gets cheaper to fund and the consumer gets a tax cut at the pump. That is a much broader trade than "peace headline, buy stocks", and it is why the leadership was software and communication services rather than anything geopolitical.
2. **ISM 55.6 is the number that breaks the frame, and almost nobody traded it.** Hedgeye's August Nowcast is Quad 3 — growth slowing, inflation accelerating. Monday's manufacturing print was the strongest in more than four years, with the employment component expanding for the first time since late 2023 and new orders at 56.7. The Atlanta Fed's GDPNow tracking estimate went to 6.2%. If that is right, the growth leg of Quad 3 is wrong. If it is not right — and a single ISM print against a soft payrolls trend is a thin reed — then Friday's employment report is the arbiter. Either way the disagreement is now explicit and dated, and it resolves at 20:30 GMT+8 on Friday.
3. Bonds rallied on a hot ISM, which tells you exactly which channel is dominating. The 5-year fell 6bp and the 10-year 5.9bp on a day when manufacturing surprised by 1.6 points to the upside and employment surprised by nearly 3. In a normal week that print sells the belly hard. It did not, because crude settled -5.11% and the inflation expectation embedded in the long end is, right now, an oil price. The 10-year is back inside its

4.61–4.75% band; Friday's break of 4.71% is now a one-day overshoot rather than a regime change. Watch what happens if crude stabilises here and the growth data stays hot — that is the combination that puts the 30-year back through 5.28%.

4. Hedgeye's book turned over in a single session and every change reduced the war exposure. XLK and XLY shorts covered, UUP and UGA longs sold. The dollar long lasted two sessions from initiation to exit — which is the process working exactly as written, not a failure of it, because the level broke the signal and the signal governs. What is left on the long side is energy **equities** (XLE, CRAK) with explicitly no position in the barrel, gold bought last week, and the country pairs: long Brazil, Colombia, New Zealand and the Philippines against short South Korea and Israel. That is a materially less crowded book than the one that went into the weekend.
5. **The overnight tape is a coiled spring, and the calendar is loaded.** Nothing moved between the New York close and this brief's data cut. Positive dealer gamma will keep damping intraday moves. Against that: BP, Pfizer and Energy Transfer report this morning; AMD and SpaceX — its first quarterly results as a public company — report tonight; roughly 911.5 million SpaceX shares unlock on Thursday against a 32.2% short interest; and the July employment report lands Friday into a Fed where three members dissented in favour of a **hike** and the market prices a 63% chance of one in September. The insurance is cheap — VIX 15.86, 0.77 off its floor. It has been cheap for a week and the week has not started yet.

3 Rates, currencies & commodities

- **Rates: the bear steepener reversed, and the belly led it.** Monday cash closes: 30Y 5.23% (–4bp), 10Y 4.686% (–5.9bp), 5Y 4.400% (–6.0bp), 2Y ~4.239% (–2bp), 13-week bill 3.700% (+1.8bp). The 5-year led the rally exactly as it led Friday's sell-off, which is the signature of an inflation-expectation trade rather than a growth trade. All of it happened on a manufacturing print that was 1.6 points hot. Overnight the futures have done nothing at all: ZB unchanged, ZN +0.03%, ZF +0.02%, ZT +0.02%. The 10-year is back inside Hedgeye's band and the signal on the yield remains **bullish** — meaning the house still expects the yield to trend higher from here.
- **The dollar recaptured its floor and Hedgeye sold it anyway.** DXY 99.99, ranged 99.42–100.02, against a Risk Range that was reset overnight to 99.70–101.52 and downgraded from bullish to **NEUTRAL**. Note the sequence: the level broke on Sunday night, Hedgeye removed UUP from the long book at 22:50 GMT+8 Monday, and the index then closed back above the floor. Selling into the recapture is uncomfortable but it is what the rule says. Crosses: EUR/USD 1.1511 (–0.14%), GBP/USD 1.3431 (–0.42%), AUD/USD 0.7001 (–0.34%), NZD/USD 0.5871 (–0.10%). The commodity currencies lagging on a session when crude fell 5% is the mirror image of Sunday night, and it is the more logical of the two.
- **The yen has stopped moving, three sessions after the largest intervention in fifteen years.** USD/JPY 157.335, –0.04%, having done essentially nothing since Friday. Japan's MoF has now confirmed the operation was **joint with the US Treasury** — the first coordinated yen intervention since 2011, and the 2011 action was to weaken the yen, so this is a directional first. Central bank data released Monday suggests Japan may have spent as much as \$36.58bn. The pair has simply held the level it was pushed to. EUR/JPY 181.072 (–0.23%). The BoJ's July minutes publish 07:50 GMT+8 tomorrow, and Ueda has said September is live.
- **Oil: the second leg came, and Hedgeye flipped the TREND.** WTI Sep settled \$80.34, –5.11%, after trading as low as \$78.59; Brent Oct settled \$83.77, –4.73%. Over Sunday and Monday combined the front contract has fallen from a Friday settle of \$84.67 to \$80.34 — \$4.33, or 5.1% — and it is holding, down only 0.24% overnight. Hedgeye's new band is **\$76.49–\$93.01 and the signal is now bearish**, downgraded from bullish; the old \$79.27 floor that was 2.2% away on Sunday has been moved down to \$76.49, which is 4.8% away. Keith was explicit on The Macro Show that Hedgeye has no position in crude at all, that WTI broke immediate-term TRADE near \$83 with TREND support around \$81, and that oil volatility running in the low-to-mid 60s makes the decline something other than an automatic buying opportunity.
- **Products told the more useful story.** RBOB settled –4.74% and natural gas settled **+1.24%** — gas did not participate in the crude break on either day. Gasoline fell almost exactly as far as crude this time, which is the opposite of the weekend, when RBOB fell only half as far. That matters for the refining margin: the crack widened over the weekend and narrowed on Monday, and CRAK closed –1.99% while XLE closed –1.28%. Hedgeye holds both and sold the pure gasoline-futures leg (UGA, –5.27%) instead. The distinction it is drawing is explicit — owning a refinery is not owning a barrel.
- **Metals: gold sold off into the close and is bid again overnight, and Keith is now long it.** Gold Dec settled \$4,090.50, –0.40%, having been up over 1% during Asian hours; it is \$4,109.30 and +0.46% now. Silver settled \$57.86 (+0.13%), copper \$6.5405 (+1.16%). The disclosure on The Macro Show is the news: Keith bought gold last week — his first purchase in an extended period — on a sequence of higher lows, with roughly **\$4,101 identified as the medium-term TRADE breakout level**. Gold is currently \$8 above it. His framing was explicitly a price-behaviour call supported by a weaker dollar, not a debasement thesis. Copper stays the only bullish-TREND metal, though Hedgeye sold its copper position on a lower-high signal before it recovered — a decision Keith called a poor outcome but a correct process.

4 Hedgeye — regime, risk ranges & Monday's four book changes

New since Sunday's brief. A full Monday publication cycle: Crypto Quant 19:12 GMT+8, MOMO Tracker 19:54, Early Look "Quantum Quads" 19:41, The Macro Show 19:36 with Summary Notes 22:34, Capital Allocation Pro Daily Dashboard 20:46, **four ETF Pro book changes at 22:50**, and Signal Strength Stocks 23:21. Monday's Early Look ranges are the live set until roughly 19:25–19:55 GMT+8 tonight.

HEDGEYE MACRO DASHBOARD	READING	WHAT IT SAYS
US MONTHLY	QUAD 3	CHANGED. July's Quad 4 is over; August Nowcast is Quad 3 — growth slowing, inflation re-accelerating modestly. Favours secular growth over cyclical
US QUARTERLY	QUAD 4	Growth slowing, inflation slowing. Positioning label: Defensive + Volatility Assets
GLOBAL	QUAD 3	Growth slowing, inflation accelerating. Stagflation Protection

HEDGEYE MACRO DASHBOARD	READING	WHAT IT SAYS
VIX gauge	15.86	Inside the "Investable Bucket" (VIX 9–19). Keith: aggregate asset allocation is near its highest in several months precisely because of this
Dealer gamma	POSITIVE	FLIPPED. Back in positive territory from last week's negative-gamma regime. Dealers now sell strength and buy weakness — it damps moves in both directions

From Monday's Early Look and Macro Show. The monthly model has now moved **toward** the quarterly one on growth and away from it on inflation, which is a genuinely awkward combination: Quad 3 and Quad 4 agree that growth is slowing, and Monday's ISM at 55.6 with an expanding employment component disagrees with both. Keith's stated resolution is that the Quad is context and the signal is the trigger — "go anywhere, but not everywhere".

Risk Ranges — Monday's Early Look "Quantum Quads", live until tonight's set publishes

INSTRUMENT	IMMEDIATE-TERM RISK RANGE	TREND	WHERE IT STANDS NOW
S&P 500 (SPX)	7,328 – 7,567	Bullish	7,600.50 — CLOSED ABOVE THE CEILING by 33.5pts. Immediate-term overbought; ES 7,635.50 overnight
Nasdaq Composite	24,317 – 25,952	◆ Neutral	25,913.90 — 38pts under the ceiling. UPGRADED from bearish. Keith expected a return to bullish TRADE on Monday's volume
Russell 2000 (RUT)	2,871 – 2,999	Bullish	2,981.91 — 17pts under the ceiling. RTY 2,995.10 overnight is pressing it
US 10Y yield	4.61 – 4.75%	Bullish	4.686% — back inside after Friday's break. Band raised from 4.59–4.71%
US Dollar (DXY)	99.70 – 101.52	◆ Neutral	99.99 — recaptured the floor. DOWNGRADED from bullish; UUP sold from the long book
WTI crude	\$76.49 – \$93.01	Bearish	\$80.34 settle — DOWNGRADED from bullish. Floor moved down from \$79.27; now 4.8% away. No Hedgeye position in crude
Nat gas	\$2.62 – \$2.93	Bearish	\$2.781 — mid-band. Rose 1.24% on a day crude fell 5%
Gold	\$4,002 – \$4,147	Bearish	\$4,090.50 settle, \$4,109.30 live — above the ~\$4,101 TRADE breakout Keith bought against
Silver	\$57 – \$61	Bearish	\$57.86 — sitting on the floor. Band raised from \$55–\$60
Copper	\$6.27 – \$6.63	Bullish	\$6.5405 — upper half. Band widened. Position was sold, signal was not
VIX	15.09 – 20.66	Bearish	15.86 — 0.77 off the floor, which was lowered from 15.77 to 15.09
HY credit (HYG)	79.23 – 79.78	Bullish	79.31 — near the floor. UPGRADED from neutral; fifth signal flip in six sessions
IG credit (LQD)	105.8 – 107.1	Bearish	106.11 — mid-band, off the 105.96 52-week low
Tech (XLK)	\$166 – \$184	◆ Neutral	178.04 (+1.53%) — UPGRADED from bearish. Short covered; through bullish TRADE, approaching TREND
Health Care (XLV)	\$158 – \$168	Bullish	162.24 (–0.19%) — the only S&P sector other than staples and energy to fall
Real Estate (XLRE)	\$44.53 – \$46.11	Bullish	45.18 (+0.24%) — mid-band. Ceiling lowered from 46.40

Ranges are from Keith McCullough's Early Look "Quantum Quads", 3 Aug 07:41 EDT, published off Friday's close. **Five signals changed:** the Nasdaq and XLK were upgraded from bearish to neutral, HYG from neutral to bullish, the Dollar was downgraded from bullish to neutral, and **WTI crude was downgraded from bullish to bearish** — the single most consequential change in the set, because the entire Quad 3 inflation leg runs through it. The TREND column carries Hedgeye's directional signal: bullish on the 10Y yield means the house expects the yield to rise, so it is a direction call and not a risk-positive one. Monday's Early Look published no Utilities range, though the text notes XLU broke to bearish TREND on last week's yield breakout, and none for USD/JPY, Brent, Nikkei, Kospi, Shanghai or DAX.

The four ETF Pro book changes — published 22:50 GMT+8 Monday

ACTION	POSITION	TREND RANGE	READ
▲ COVER SHORT	Technology Sector (XLK)	165.0 – 184.0	Broke back through bullish TRADE and is approaching TREND. Had already been cut to minimum size. Closed +1.53%
▲ COVER SHORT	Consumer Discretionary (XLY)	108.0 – 118.0	Closed 118.21, +1.83% — through the

ACTION	POSITION	TREND RANGE	READ
			top of its own band. Amazon did most of it. The short was added 29 July
▼ SELL LONG	US Dollar Bullish (UUP)	28.0 – 28.6	Initiated Thursday, added Friday, sold Monday. Closed 28.17, unchanged. Two sessions from entry to exit
▼ SELL LONG	Gasoline Futures (UGA)	110.0 – 125.0	Closed 111.72, -5.27% — the worst single position in the book. Added 30 July, sold 3 August

Hedgeye's own rubric: removal from the long side means the ETF has broken TRADE and/or TREND — sell it. Removal from the short side means the same in reverse — cover it. Read the four together and the direction is unambiguous: **the book cut its war exposure and its short-tech exposure in the same session.** That takes the ETF Pro book from 25 long / 16 short to roughly 23 long / 14 short. What remains on the energy long side is XLE and CRAK — equities, not barrels — plus broad commodities (CERY). The four longs added between 28 and 30 July at the top of a +20% month in crude are now down to two.

Also on the desk — what Keith said on The Macro Show, Monday

- ◆ **NEW LONG: gold.** Bought last week, his first purchase in an extended period, on a sequence of higher lows and an improving immediate-term signal, with roughly \$4,101 the medium-term TRADE breakout. Framed on a weaker dollar and on price behaviour — explicitly not on a debasement or inflation thesis. GLD closed +0.05%, AAU +0.05%.
- ◆ **COVER: the tech short, and the European shorts.** XLK covered as it moved through bullish TRADE toward TREND. Separately, Hedgeye covered its European equity and euro shorts **before** Friday's currency intervention, because Germany, France and euro exposures had returned to bullish TRADE and TREND. Keith's point was that the signal exited ahead of the policy move rather than after it.
- ◆ **SOLD: copper, corn and wheat.** Copper sold on a lower-high signal and then promptly returned to bullish TREND — Keith called it a poor outcome but a correct process, and warned against judging a decision by what happened after it. Corn subsequently broke TREND and kept falling. He grouped declines in tea, lumber, cotton, canola and corn as evidence of food-commodity disinflation.
- ◆ **STILL SHORT: South Korea.** EWY held through Friday's record squeeze and through Monday's -5.12% Kospi session. Keith's framing: some of the largest rallies happen inside bear-market declines, Korea is roughly 31% off its cycle peak, and the growth trajectory and market signal are both still bearish. The opposing long is the Philippines (EPHE, +1.80% Monday). He also took a direct shot at the Bank of Korea for raising rates into a Quad 3 slowdown.
- ◆ **POSSIBLE NEW SHORT: TLT.** Flagged as a candidate on the day, expressing the view that long-duration Treasury prices stay vulnerable as yields rise. He highlighted the vertical move in the 30-year and a rising MOVE index as evidence the bond market is **not** confirming the peace trade. Note the tension with everything else in the book: this is a position that works if the crude break does not hold.
- ◆ **UNCHANGED: long XLE and CRAK, no position in crude.** Both added on the prior decline. If XLE breaks TREND he sells it; if the signal holds he adds. No discretionary oil forecast is being used to defend either.

Signal Strength Stocks was refreshed twice on Monday, finishing at 68 names — **added** Synchrony (SYF), Capital One (COF), Philip Morris (PM) and Take-Two (TTWO); **removed** Lamar (LAMR) and CrowdStrike (CRWD). Two consumer-credit adds and a tobacco add into a Quad 3 nowcast is a defensible combination; the CrowdStrike removal sits oddly against covering the tech short on the same day, and is worth noting as an internal tension rather than a contradiction — Signal Strength Stocks is a screen, not a portfolio.

5 Mag7 scoreboard (Mon 3 Aug close)

NAME	LAST	DAY	CAP	READ
Meta (META)	\$590.24	▲ +6.02%	\$1.50T	Biggest Mag7 move. Still ~26% below the \$796.25 52-week high — this is repair, not recovery
Microsoft (MSFT)	\$487.65	▲ +4.93%	\$3.62T	Keith named it specifically as the Quad 3 expression: secular software growth, not cyclical semis
Alphabet (GOOGL)	\$373.51	▲ +4.88%	\$4.57T	Third straight session of AI-monetisation bid. Also the engine behind Oracle's +9.22%
Amazon (AMZN)	\$284.02	▲ +4.58%	\$3.06T	RECORD CLOSE, and \$3 trillion of market value for the first time. Up ~17% on the week — its best since 2015
Tesla (TSLA)	\$322.08	▲ +3.49%	\$1.27T	Fourth day above \$300 and now clearly through it. Still the year-to-date Mag7 laggard
Nvidia (NVDA)	\$206.64	▲ +2.93%	\$5.01T	Back to a \$5trn handle — but well below its May peak. Participated without leading, a fourth straight session
Apple (AAPL)	\$303.42	▼ -1.78%	\$4.46T	The only Mag7 decliner, for a second session. The memory-cost problem Cook named has not been repriced

Monday official cash closes. Six of seven rose and the dispersion inverted from Friday: the two names that carried Friday (Amazon, Alphabet) were mid-pack, and the three that had been broken — Meta, Microsoft, Tesla — led. Note what did **not** happen: Apple fell again. The market has now had two full sessions to look past Cook's guidance on supply constraints and memory costs and has declined to. Apple is the cleanest large-cap short expression of the memory squeeze and the tape keeps agreeing. Amazon's \$3trn is the genuine milestone of the session; Nvidia's \$5.01trn is not a new one — it first crossed \$5trn in late April and peaked materially higher in May.

6

Positioning & options

- **Positive gamma is the single most important mechanical change.** The Macro Show confirmed dealer gamma has moved back into positive territory after the negative-gamma regime that produced Thursday's crash and Friday's 14% two-day High Beta Momentum bounce. In positive gamma, dealers hedge by selling strength and buying weakness, which compresses realised volatility and truncates both tails. The overnight tape — four equity futures contracts moving a combined 0.65 percentage points on almost no volume — is exactly what that looks like. Do not extrapolate Thursday-and-Friday-style ranges into this week unless the gamma flips back.
- **The S&P is overbought against its own signal, and that is a sizing instruction.** 7,600.50 against a 7,328–7,567 Risk Range. Hedgeye's rulebook treats a close above the top of the immediate-term range as the place to reduce rather than add, in the same way a break of the floor is the place to cut size. The Russell is 17 points from the same problem and the Nasdaq is 38 points from it. The whole complex is pressed against its ceilings simultaneously, three days before payrolls.
- **Equity exposure is near its highest in several months and the reason given is the VIX, not the news.** Keith was explicit: aggregate asset allocation is elevated because the VIX is below 19 and inside the Investable Bucket, and in that environment the instruction is to buy weakness in the process-supported sectors and styles. That is a volatility-regime decision, not a directional call on Iran. The corollary matters — if the VIX takes out 20.66, the same rule pulls the allocation back down mechanically.
- **The dollar trade is closed, and the round trip is the lesson.** Initiated Thursday on an oversold signal near the low end of the range, UUP added Friday, level broke Sunday night, position sold Monday. UUP closed unchanged at 28.17 — so the P&L on the ETF leg was roughly flat, and the process cost nothing except the opportunity. This brief flagged on Sunday that it was the one item with a rule attached to it. The rule executed. What it removes is the negative-correlation hedge against the bitcoin short and the offset to the energy longs.
- **Equal weight closed the gap it opened on Friday, partially.** RSP 217.11, +0.98%, against a cap-weighted S&P +1.48% — 50 basis points of underperformance, against 87bp on Friday. Two sessions of the third-largest SPX-versus-equal-weight spread on record have now been followed by a session where breadth improved but did not lead. The Russell's +1.73% is the more encouraging breadth signal. Keith remains long RSP and prefers it to the Dow as the broad US expression, which is worth remembering on a day the Dow set the record.
- **The SpaceX setup is the week's genuine binary and the positioning is extreme.** SPCX closed 114.53, +5.68%, having printed an all-time low of \$107.01 on 28 July — roughly 30% below the \$135 IPO price and 49% below the \$225.64 June peak. Short interest is reported at **32.2% of tradable float**. First-ever quarterly results land after tonight's close (webcast 04:30 GMT+8 Wednesday), and roughly 911.5 million shares — about 20% of insiders' restricted holdings, worth over \$100bn against an estimated \$86bn free float — unlock on Thursday. That is an unlock about 1.5 times the size of the entire record IPO, two days after earnings, into a one-third short base. Musk's controlling stake stays locked to June 2027.
- **Sentiment and the bounce arithmetic have not changed.** High Beta Momentum remains roughly 60% below its peak after the two-day bounce — still requiring about a 150% gain to recover. Korea rose 17.91% on Friday and fell 5.12% on Monday, and is still around 31% below its cycle high. AAIL bearishness was 42.1% in the week to Wednesday, a 25th consecutive week above the 31.0% historical average. None of this is a timing tool. What is new is that BofA has 77% of S&P 500 reporters beating — the highest beat rate since 2021 — with Q2 EPS growth tracking +27% year-over-year excluding the Alphabet and Amazon mark-ups. The earnings are genuinely good; the positioning is what has been broken.

7

Sector rotation — leaders & laggards (Mon 3 Aug)

SECTOR (SPDR PROXY)	CLOSE	DAY	NOTE
Communication Services (XLC)	111.34	▲ +2.86%	BEST. Alphabet and Meta together
Industrials (XLI)	183.16	▲ +1.85%	Boeing +8.03% on the 737 Max 7 certification
Consumer Discretionary (XLY)	118.21	▲ +1.83%	Closed through its own 108–118 band. Hedgeye covered the short
Technology (XLK)	178.04	▲ +1.53%	Software +3.00% (IGV) vs semis +0.91% (SMH) — a 2pt split inside one sector
Materials (XLB)	51.01	▲ +1.15%	Copper +1.16% did the work
Financials (XLF)	57.38	▲ +0.77%	Lagged on the yield rally. Hedgeye added SYF and COF to Signal Strength
Real Estate (XLRE)	45.18	▲ +0.24%	Long position. Should have done better on a 6bp rally — it did not
Utilities (XLU)	44.36	◆ +0.02%	Flat. Broke to bearish TREND last week on the yield breakout
Health Care (XLV)	162.24	▼ -0.19%	Tracked toward a record close intraday on the AZN/BMY story, then faded
Consumer Staples (XLP)	84.86	▼ -0.22%	The classic risk-on tell — defensives sold

SECTOR (SPDR PROXY)	CLOSE	DAY	NOTE
Energy (XLE)	58.79	▼ -1.28%	WORST. E&P (XOP) -1.76%, refiners (CRAK) -1.99%. Both Hedgeye longs

- ▲ **Leaders, and they were not the obvious ones.** CoreWeave +19.49% (Truist upgrade to Buy after a 42% pullback), Nebius +11.64%, Coherent +9.60%, Lumentum +9.24%, Oracle +9.22%, Vertiv +8.89%, Boeing +8.03% (FAA certified the 737 Max 7 after nearly a decade), Snap +7.46%, Ferguson +6.72% (joins the S&P 500 Wednesday, replacing Electronic Arts), Norwegian Cruise +6.64% and United +5.82% and American +5.04% (jet fuel), Imax +6.61% to an all-time high on Nolan's "The Odyssey", Corning +6.07%, SanDisk +6.03%, Alibaba +4.13% on the Qwen3.8-Max launch.
- ▼ **Laggards.** GameStop -12.25% on a \$1.4bn convertible-for-equity exchange that raises no cash; Marriott -6.97% on a revenue miss and soft Q3 guidance, with Middle East RevPAR down 43%; AstraZeneca -6.88% on Financial Times reports of merger talks with Bristol Myers; eBay -6.03% (Wells Fargo downgrade); Circle -3.61% (Morgan Stanley downgrade); Western Digital -3.23% and Seagate -2.93% on memory; then the energy complex — ONEOK -2.83%, BP -2.12%, Diamondback -2.07%, Chevron -1.85%, Williams -1.55%; Eli Lilly -2.39%, McDonald's -2.00%, Apple -1.78%.
- ◆ **Rotation read.** This was the July trade run backwards in a single session. AI infrastructure — the exact complex that was liquidated through the month — was the leadership: CoreWeave, Nebius, Vertiv, Coherent, Lumentum, Oracle, all of them heavily shorted, heavily de-rated, and all of them up between 9% and 20% on no company-specific news beyond one upgrade and a Gemini partnership. That is a squeeze, not a re-rating. The tell is inside technology itself: software +3.00% against semiconductors +0.91%, which is precisely the Quad 3 split Keith described — secular revenue growth over cyclical revenue growth. It is also why covering the XLK short and staying cautious on semis are not contradictory positions. Energy was the only sector down more than a quarter of a percent, and the two Hedgeye longs in it (XLE, CRAK) were both worse than the sector.

8 Forward — futures & the week ahead

- **Where the tape is as Asia prepares to open.** At 06:57-06:58 GMT+8: ES 7,635.50 (+0.10%), NQ 28,947.00 (+0.19%), YM 53,425 (+0.17%), RTY 2,995.10 (+0.19%) — all four green and all four essentially unchanged, on 4,780 / 4,863 / 518 / 545 lots respectively. Treasury futures flat to a whisker firmer: ZB 0.00%, ZN +0.03%, ZF +0.02%, ZT +0.02%. WTI -0.24% at \$80.15, Brent -0.08% at \$83.70. Gold +0.46%, silver +0.89%, copper +0.12%. Dollar 99.99. Crypto mixed and going nowhere: BTC \$63,522 (+0.04%), ETH \$1,856.41 (-1.43%), SOL \$73.40 (-0.20%), XRP \$1.0743 (-1.06%), BNB \$589.09 (+0.27%). **Nikkei futures 63,560, +0.17%**, pointing Tokyo very slightly higher. The only cash equity market trading is New Zealand: the NZX 50 is 13,803.05, +0.20%.

DAY (GMT+8)	KEY EVENTS
Tue 4 Aug (today)	★ BP Q2 results, 14:00 — the first major integrated to report into the crude break, days after putting its entire UK North Sea business up for sale (reported \$1.75-3bn). The 14 July trading statement guides to refining margins +\$1.2-1.4bn q/q and net debt down to \$22-23bn, on a Q2 Brent average of \$103.85. ★ Pfizer and Energy Transfer before the US open; also Caterpillar, Spotify, Marriott. ★ McDonald's before the open, call 20:30 (cons. EPS \$3.34, rev \$7.129bn). ★ US trade balance 20:30; JOLTS job openings and June factory orders 22:00. ★ AMD reports after the US close — closed 484.64, +1.78%, having traded \$515.62 last Friday. ★ SpaceX (SPCX) reports its first-ever quarterly results, webcast 04:30 GMT+8 Wednesday. ★ API crude stocks 04:30. ★ And the Iran negotiation that Washington says is happening and Tehran says is not.
Wed 5 Aug	★ BoJ July meeting minutes, 07:50 — the first documentary read on an 8-1 hold where Ueda has since said September is live. ★ ADP employment change 20:15, S&P Global Services PMI 21:45, ISM Services 22:00 — the cross-check on Monday's 55.6 manufacturing surprise. ★ EIA crude inventories. ★ Eli Lilly, Disney, Uber, Shopify, Figma, eBay and SanDisk report. ★ Ferguson replaces Electronic Arts in the S&P 500 at the open. ★ NZ Q2 unemployment 06:45 (cons. 5.4%).
Thu 6 Aug	★ SpaceX lock-up expiry — roughly 911.5m shares, the largest single tranche of a 16-date staggered schedule, landing two sessions after earnings into a 32.2% short interest. ★ Weekly jobless claims 20:30 (prior 197k). ★ Australia trade balance 09:30. ★ Datadog, Lyft, Warner Bros Discovery, Roku, Airbnb, DraftKings.
Fri 7 Aug	★ US July employment report, 20:30. The first hard labour print since three FOMC members dissented in favour of a hike on 29 July, and the arbiter of Monday's ISM. June ran +57,000 payrolls against a 115,000 consensus, with unemployment at 4.2% only because participation fell 0.3pp to 61.5%, and April-May revised down a combined 74,000. July consensus is unusually dispersed — see Data-confidence. ★ China trade balance 11:00.
Watch	Whether Iran says anything at all that corroborates Washington's version — as of Monday it was denying that negotiations exist. Whether crude holds; the new Hedgeye floor is \$76.49, now 4.8% away, and the TREND is bearish. Whether the S&P can hold a close above 7,567 or mean-reverts back inside the range. Whether ISM Services confirms or contradicts Monday's manufacturing surprise. Whether the market's 63% probability of a September rate hike survives Friday. And the structural one: Fed Chair Warsh's proposal to cut the number of FOMC meetings, with a decision possible before mid-September.

Times converted to GMT+8 by adding 12 hours to US Eastern. BP's release is 07:00 BST = 14:00 GMT+8. **Correction carried forward:** Sunday's edition placed BP, Pfizer and Energy Transfer on Monday 3 August; all three in fact report Tuesday 4 August. BP's own investor-relations page is unambiguous on the date. Palantir did report Monday after the close, as this brief said it would. Time-of-day for AMD, Eli Lilly, Disney and Caterpillar is from secondary calendars and is not confirmed against company releases; McDonald's and SpaceX are confirmed from primary sources.

9

Corporate news

- **Palantir: the print of the quarter, and it was not close.** Revenue \$1.935bn against \$1.80bn expected, **up 93% year-over-year**. Adjusted EPS \$0.41 against \$0.35. GAAP net income \$1.062bn on a 55% margin, up roughly 225% from \$329m a year ago. US revenue +115%; **US commercial revenue \$764m, +149%**, and up around 380% on a compounded basis since 2024. Closed total contract value \$3.373bn (+49%), with US commercial TCV a record \$2.132bn (+153%) and remaining deal value \$6.238bn (+124%). Adjusted free cash flow \$1.220bn, a 63% margin; the Rule of 40 score was 155%. Guidance raised across the board — FY26 revenue to \$8.150–8.158bn from \$7.65–7.66bn, adjusted FCF to \$4.5–4.7bn. Karp: "This quarter was otherworldly." The stock closed the regular session +2.10% at \$125.65 and traded up roughly 14% after hours toward \$143. It had been down 29% year-to-date going in.
- **AstraZeneca and Bristol Myers: a possible \$400bn pharma combination, and the market hated it.** The Financial Times reported the two have held talks over several months about combining. Neither confirmed. **AZN fell 6.88%** — down as much as 7% intraday, second-worst on the FTSE 100 — while BMJ closed +0.24% having been up more than 5% premarket, giving back the entire move. Jefferies: "if there is one company that doesn't need financial engineering, it's AZ." Citi called it a surprise given AZ's best-in-class pipeline. The read is straightforward: the market is pricing this as AstraZeneca buying a patent-cliff problem — Bristol Myers faces loss of exclusivity on Eliquis and Opdivo — rather than as a growth combination.
- **Boeing +8.03%: the FAA certified the 737 Max 7** after nearly a decade of delays, describing it as reflecting years of work to resolve complex technical issues. Southwest is the key expected operator. This is the single largest overhang on the narrowbody backlog clearing, and it happened on a day the market was already risk-on.
- **The AI-infrastructure squeeze was the day's real story.** CoreWeave +19.49% after Truist upgraded it to Buy following a 42% pullback, citing AI compute demand and a valuation gap to other neocloud names. Nebius +11.64%, Vertiv +8.89%, Coherent +9.60%, Lumentum +9.24%. **Oracle +9.22% to \$141.85** — its move accelerated into the close, having been only +5.3% at 10:39 EDT — on risk-on beta plus momentum from last week's expanded Alphabet partnership giving Oracle customers access to Gemini 3.1 Flash Lite and 3.5 Flash. Oracle hit a 52-week low in late July and remains around 48% below its high. There was no Oracle-specific announcement on Monday; this is a squeeze in a broken name, not a re-rating.
- **Marriott -6.97% is the clean read on what the war actually cost.** Revenue \$7.07bn against \$7.2bn expected, Q3 EPS guidance below consensus, and international RevPAR -0.5% **with the Middle East down 43%**. It also raised full-year RevPAR guidance. That combination — a bad quarter, a raised outlook, and a 43% regional collapse — is the most specific corporate evidence in this brief of what reopening Hormuz would be worth, and to whom.
- **Trump went after the oil majors.** "They're making too much money based on a shortage. I don't like it," referring to Exxon and Chevron's war-driven profits. Both were already lower — XOM -0.24%, CVX -1.85%. Note the direction of travel: a president who is negotiating the war down is now also talking the energy majors' margins down. For a book that is long XLE and CRAK, that is a second, political channel of risk sitting on top of the commodity one.
- **Deals and the rest of the tape.** BP completed the sale of its Gelsenkirchen refinery to Klesch Group, expected to cut underlying opex by roughly \$1bn. Shell agreed to sell its European onshore renewables portfolio to TotalEnergies. Doosan agreed to buy 70.61% of SK Siltron from SK Inc. for KRW 2.3trn (~\$1.7bn). GameStop -12.25% on a \$1.4bn convertible-for-equity exchange from which it receives no cash. Alibaba +4.13% on the Qwen3.8-Max launch, with open weights due next week, days after DeepSeek's V4 Flash beta. ArcelorMittal deepened a Microsoft Azure partnership. After the close: ON Semiconductor beat and traded +5%; Snap beat on revenue — \$1.6bn against \$1.54bn, with DAU and ARPU both ahead, helped by World Cup advertising — and traded +11%; Whirlpool missed, cut guidance and traded -3%.
- **Strategy (MSTR) has started selling bitcoin.** It disclosed the sale of **1,638 BTC for \$104.7m** between 27 July and 2 August at an average \$63,957, using about half to fund preferred dividends and the rest to buy back STRC, and raised a further \$290.6m through at-the-market stock sales. Set that against Sunday's brief: the largest structural bid in bitcoin had merely been switched off for five weeks. It is now, at the margin, a seller. US spot bitcoin ETFs saw \$265.37m of net outflows on Friday and \$61.5m for the week. MSTR closed +1.69% at \$94.86 — a \$34.7bn company that was worth over \$100bn in the spring.

10

Macro data

- **ISM manufacturing was the biggest upside surprise in over four years, and it changes the argument.** July printed **55.6** against a 54.0 consensus and a 53.3 prior — up 2.3 points and the strongest since May 2022. Production 58.5 (+6.3), new orders 56.7, backlog 55.0 (+4.5), new export orders 53.0 (+4.5), and **employment 52.8 (+3.1) — the first expansion in 33 months**. Prices paid eased to 71.1 from 73.0 but stayed well above the 50 line and slightly above consensus. Read the components rather than the headline: this is broad, it is order-led, and it has a labour component turning for the first time in nearly three years. It is one print. It is also the first serious evidence against the growth-slowing half of the Quad framework.
- **The Atlanta Fed's GDPNow was lifted to 6.2% from 5.0%.** Treat that number with the caution any early-quarter nowcast deserves — it is trade- and inventory-sensitive and it will move a great deal before the advance estimate. But the direction is unambiguous and it is the same direction as ISM.
- **Construction spending went the other way**, falling 0.1% against a +0.2% consensus. Minor, but it is the one component of Monday's data that agrees with the slowdown thesis.
- **Friday's payrolls is now doing double duty.** It is both the first hard labour print since three FOMC members dissented in favour of a hike, and the arbiter of whether ISM's employment turn is real. June was weak — +57,000 against a 115,000 consensus, with the unemployment rate holding 4.2% only because participation fell 0.3 percentage points to 61.5%, the lowest since March 2021, and with April and May revised down a

combined 74,000. Consensus for July is genuinely dispersed across sources, from roughly 88,000 to 130,000, with the unemployment rate variously 4.2% or 4.3%. Establish your own number. The asymmetry is the unusual part: because the dissents were hawkish, **a hot print is the risk here, not a cold one.**

- **The market prices a 63% probability of a 25bp rate HIKE in September.** The Fed held at 3.50–3.75% on 29 July on a 9–3 vote, with Hammack, Kashkari and Logan all dissenting for a hike, and the statement cited elevated inflation partly attributable to Middle East energy shocks. That last clause is the one to watch: if crude stays down, the committee's own stated justification for the hawkish dissent weakens. New York Fed President Williams said Monday that policy is "well positioned" and that the Fed is "not obliged to ratify market levels."
- **Korea is tightening into a crash, and Hedgeye has noticed.** The Bank of Korea raised its base rate 25bp to 2.75% on 16 July — its first hike in three and a half years — citing persistent inflation alongside semiconductor-driven growth. Governor Shin told the National Assembly on 29 July that maintaining a hike stance is "most reasonable" to bring core inflation down, while also acknowledging that "stock prices have recently undergone a sharp correction." A second consecutive hike is expected on 27 August. Keith's Early Look put it less diplomatically, describing the decision to raise rates into a Quad 3 slowdown and a stock market crash in terms that are not printable here.
- **The other central banks are all on hold this week.** No Fed, ECB, BoE, BoJ, RBA, RBNZ or BoK decision falls between 4 and 7 August. The BoJ held at 1.00% on 31 July on an 8–1 vote and publishes minutes Wednesday; the BoE holds at 3.75%; the RBNZ has restarted a tightening cycle with further hikes expected in September and December; the RBA is expected on hold at 4.35% after a softer June CPI. The BoK meets 27 August.
- **Tariffs remain the inflation input a peace deal does not touch.** The 10% to 12.5% Section 301 round on 60 trade partners was cited by Warsh at the July press conference as one of the shocks the committee weighed. It sits underneath the Quad 3 inflation call and is entirely independent of the Strait. Whatever happens in the negotiation, this part stays.

11 Geopolitics

- ▼ **Iran said on Monday that there are no negotiations with the United States.** The foreign ministry stated there are currently no talks with Washington — only discussions with Oman about management of a shipping route, which Iran's foreign minister said are in their final stages, and which Tehran has repeatedly insisted is a separate question from whether the Strait itself opens. That is a direct contradiction of the premise on which crude fell 5% and the Dow set a record.
- ▲ **Trump insisted the talks are happening.** He called Iran's leadership "unbelievably duplicitous", said the operation he cancelled "would have been the biggest attack since World War II", and described a deal as "imminent" on Hormuz and ultimately on denuclearisation. He also framed the renewed contact as Tehran's last chance to sign before "decapitation", and separately said the US Navy effectively blockades the Strait. Saudi Arabia, the UAE, Qatar and — on his account — Iran itself asked him to call the strike off.
- ◆ **So the two sides do not agree that a negotiation exists.** That is a materially weaker position than this brief carried on Sunday, when the disagreement was about the content of a deal rather than about whether talks were happening. Markets went up 1.5% anyway. The honest description of what is priced is: a US statement about a negotiation that the counterparty denies, into a market that had already positioned for the war continuing. The move is as much about what was owned as about what was said.
- ◆ **The base rate remains poor and remains recent.** The June memorandum of understanding was signed, held for weeks and broke: on 7 July Iran fired on three commercial vessels in Omani waters, CENTCOM struck in response, and by 12 July the IRGC had formally closed the Strait. Trump reinstated the blockade on 13 July. The Strait has been impassable since 8 July, and this is not the first halt announced since the war began on 28 February. Commonwealth Bank estimated on Friday that Hormuz transit had recovered to only 30–35% of pre-war levels against a normal ~88 ships a day, and that 50–60% would be enough to reassert oversupply. Nothing published on Monday updates that number.
- ◆ **The read, and it is a position-sizing read rather than a directional one.** Two sessions have now priced a de-escalation that one of the two parties denies is under way. Crude has taken \$4.33 out of the front contract and held it; Hedgeye has responded by flipping the crude TREND to bearish, taking the gasoline long off, and keeping the energy equities. That is the right shape of response. The tail is genuinely two-sided for the first time in five months — but the party that controls the waterway has now publicly denied both the premise and the existence of the negotiation, and Marriott's 43% Middle East RevPAR decline is a reminder of how much real economic damage is sitting there waiting to be released if it does hold. Small sizes, both ways.

12 Asia setup — today (Tue 4 Aug, pre-open)

INDEX	MON 3 AUG CLOSE	THE TUESDAY SETUP
Kospi (Korea)	▼ 6,257.45 (–5.12%)	GAVE BACK A THIRD OF FRIDAY'S RECORD DAY. SK Hynix –8.79%, Samsung –8.76% — straight reversal of Friday's +29%/+30%. Foreigners net sold ₩2.84trn (\$1.98bn), institutions ₩1.95trn, retail net bought ₩4.65trn. Still ~31% below the 9,114.55 June record. EWY, in contrast, closed +2.00% in New York
Kosdaq (Korea)	▲ 737.35 (+2.44%)	The divergence of the day. Opened –1.36%, reversed at 09:30, triggered a buy-side sidecar at 10:28. Daishin attributes it to rotation out of semis into pharma, biotech and robotics
Nikkei 225	▼ 63,754.90 (–0.94%)	Ranged 62,703–63,905. Keith flagged it as bearish TREND: the yen intervention did not help Japanese equities and JGB 10y rose 3bp to 2.83%. Toyota –5%+

INDEX	MON 3 AUG CLOSE	THE TUESDAY SETUP
Taiwan (TWII)	▲ 43,386.41 (+0.62%)	into an expected fifth straight quarterly operating-profit decline. NKD futures 63,560, +0.17%
Shanghai	▼ 3,809.66 (-0.59%)	Held its Friday gain where Korea did not — the cleanest evidence that Monday's Korean move was positioning, not the memory cycle
Shenzhen	▼ 13,448.29 (-0.96%)	CSI 300 -0.98%. Caixin manufacturing followed the official gauge's contraction to 49.2. The one Asian market with a genuine domestic growth problem
Hang Seng	▲ 26,009.40 (+0.48%)	Underperformed Shanghai on the tech read-through — the mirror of Friday
Sensex	▲ 78,639.03 (+0.70%)	Fifth green day and still the least excited market in Asia through the entire episode
S&P/ASX 200	▲ 9,019.30 (+0.47%)	Fifth straight gain. USD/INR 95.33. A cheaper barrel remains India's cleanest macro win — see Data-confidence on a Sensex/Nifty inconsistency
S&P/NZX 50	▲ 13,803.05 LIVE	Closed at the session high. Heavy energy and materials weight, and it went up anyway — copper did the work
Straits Times	▼ 5,612.28 (-0.29%)	The only cash market trading , +0.20% at 11:05 NZST off a Monday close of 13,774.93 (+0.55%). Hedgeye is long New Zealand (ENZL, \$47.13, +0.67% Monday). NZ Q2 unemployment prints tomorrow
		Third down day, now 1.8% off last week's 52-week high

All levels are Monday closes except the NZX 50, which is live. Asian cash markets open from 08:00 GMT+8 (Tokyo, Seoul), 09:30 (Hong Kong, Shanghai) and 12:15 (India). USD/KRW closed Seoul at 1,429.8, 5.8 won weaker on the day.

- ◆ **The read.** Asia priced Friday's squeeze out on Monday and now has to price New York's record separately. The two are not the same trade. Korea's -5.12% was mechanical — foreigners and institutions sold ₩4.8trn between them into retail hands, and Taiwan, which has the same memory exposure and none of the same positioning, closed **up** 0.62% on the same day. That is the cleanest possible evidence that Friday was a short squeeze and Monday was its unwind, and that neither told you anything about HBM demand. Then New York rallied 1.5% with software leading semis by two points. So the region opens into: a positive US handover, a Nikkei future pointing 0.17% higher, a crude price 5% cheaper than Friday for every net importer in the region — Japan, Korea, Taiwan, India, the Philippines — and a Korean market where the ETF closed **up 2.00%** in New York against a cash index that fell 5.12%. Expect Korea to open better than it closed. Expect dispersion rather than a clean gap: importers and industrials bid, semis mixed, and China still trading its own domestic contraction. Morgan Stanley upgraded Korean equities to overweight on Monday with a 9,000 Kospi target; Hedgeye is short the same market and reiterated it. Both can be right on different durations, and only one of them has a stop.

13 AI watch

- **Palantir just answered the demand question for the software half of the trade.** Revenue +93%, US commercial +149%, remaining deal value +124%, FY26 guidance raised by half a billion dollars, and a Rule of 40 score of 155%. Whatever is true about AI valuations, the enterprise spend showing up in this company's reported revenue is accelerating, not decelerating — and it did so in the same quarter that Azure passed \$100bn annualised, AWS grew 37% and Google Cloud grew 82%. Four different vendors, four different starting points, all accelerating simultaneously. The bear case on AI has to be about who funds the depreciation, not about whether anyone is buying.
- **And the market bought the infrastructure, violently.** CoreWeave +19.49%, Nebius +11.64%, Lumentum +9.24%, Coherent +9.60%, Vertiv +8.89%, Oracle +9.22% — the exact complex that was liquidated through July, up 9% to 20% in one session on one upgrade and a partnership. That is short covering into positive gamma, not a fundamental re-rating, and it is worth being precise about the distinction because the same names will give it all back if the tape turns. Truist's CoreWeave upgrade explicitly cited a 42% pullback as the reason.
- **The software-versus-semis split is now the whole trade, and Hedgeye has named it.** IGV +3.00% against SMH +0.91% on Monday. Keith's framing for August Quad 3 is explicit: favour secular or organic growth companies whose revenue can accelerate while economic growth slows — software, and he named Microsoft specifically — over cyclical semiconductor exposure whose growth decelerates after a peak. That is why covering the XLK short and staying cautious on semis are consistent rather than contradictory. AMD reports tonight into exactly that question, having closed 484.64 after trading \$515.62 on Friday.
- **Memory remains the fault line.** Micron closed +0.79% having been down 3% premarket; Western Digital -3.23% and Seagate -2.93%; Apple fell 1.78% for a second session having named memory costs on the record. The shortage is simultaneously a multi-year pricing regime for the producers and a margin problem for everyone who buys from them, and the market still refuses to hold both positions on the same day. Korea is the purest expression: Samsung and SK Hynix fell about 9% each on Monday having risen about 30% each on Friday, on no news either way.
- **The capex number has not changed and cheaper energy helps it twice.** The four hyperscalers have guided to a combined \$720–745bn of 2026 capital expenditure, and Bloomberg puts Big Tech's total outstanding AI commitments at roughly \$2 trillion. That is funded at the long end, where the 30-year is 5.23% after falling 4bp on Monday, and it is operated on a power bill. A durable crude de-escalation improves the discount rate and the operating cost at the same time. This is the honest mechanical case for why AI infrastructure — not defence, not energy — was the leadership on a Middle East peace headline.

- **The Chinese model cycle keeps compressing.** Alibaba launched Qwen3.8-Max on Monday with open weights due next week, days after DeepSeek's V4 Flash beta. BABA closed +4.13%. The open-weights cadence out of China is now faster than the closed-model cadence out of the US, and it is the input to the AI trade that no amount of American capex controls.

14 Beyond the markets

- **A record high was set on a story the other side denies.** On Saturday the president of the United States said the perimeters of a deal had been agreed. By Monday Iran's foreign ministry was saying there were no negotiations with the United States at all. In between, the Dow Jones Industrial Average closed at the highest level in its history. It is worth stating plainly what has been priced: not an outcome, not an agreement, but a two-day-old unilateral characterisation of a process whose existence is contested. Markets are allowed to price probabilities. It is the confidence of the move — a record, not a bounce — that deserves a second look.
- **The ISM print is the most underrated number of the week and almost nobody traded it.** Manufacturing at 55.6, the best in more than four years, with employment expanding for the first time in thirty-three months, landed on a day the entire tape was watching a Truth Social post about Iran. Yields fell. If the growth data is genuinely turning, then the consensus framework that both Hedgeye and most of the street are running — growth slowing, inflation the only question — is wrong on its first term, and Friday's payrolls is where that gets settled. The interesting scenario for the rest of August is not stagflation. It is an economy that is accelerating while its oil price collapses, into a Fed with three members already voting to hike.
- **Hedgeye sold the dollar it bought four days earlier, and that is the system working.** Initiated Thursday on an oversold signal, UUP added Friday, level broke Sunday, position closed Monday — and the index then closed back above the floor it had broken. It would be easy to write that up as a whipsaw. It is more useful to note that the position cost essentially nothing (UUP closed unchanged), that the rule was published in advance, that it was flagged in this brief before it triggered, and that it executed without discretion. Most process failures are not wrong signals. They are correct signals that somebody decided to argue with.
- **Strategy has crossed from not-buying to selling.** 1,638 BTC sold for \$104.7m at an average \$63,957, about half of it to fund preferred dividends. For five years the company's entire identity was that it only ever bought. The structural bid that underwrote a large part of the bitcoin thesis is now, at the margin, an offer — and the reason is prosaic: it has preferred dividends and debt to service, and it is choosing the coin as the source of funds. Bitcoin is at \$63,522 and has gone nowhere for a week. The largest holder selling into that, quietly, in a disclosure rather than an announcement, is the more informative fact.
- **Marriott put a number on the war that no oil price can.** International RevPAR -0.5%, **with the Middle East down 43%.** Five months of a closed Strait shows up in a crude price everybody watches and in a regional hotel occupancy number almost nobody does. If Hormuz genuinely reopens, the crude repricing happens in hours and is mostly done; the 43% takes quarters to come back and nobody has modelled it. That asymmetry — fast financial repricing, slow real repricing — is where the actual money in a de-escalation would be, and it is not in the energy complex.
- **And the Dow record is a strange kind of milestone.** The index that made the new high is the one Keith calls insufficiently broad, on a day equal weight lagged it by 50 basis points and the S&P finished 0.27% short of its own record. Thirty industrial names, price-weighted, set an all-time high in the same month that saw the worst month for semiconductors since 2008, the worst month for the Kospi since 1997, a \$45bn fund liquidated, a 19-year high in the 30-year Treasury, two currency interventions and a shooting war in the Gulf. The Dow has now been the calmest index through the most violent quarter in years — which says less about the American industrial economy than about what a price-weighted average of thirty large companies actually measures.

15 Appendix — stock cards

Names in focus plus the levels that matter — last + day · market cap or band · next key date · one-line read. Equity prices are Monday 3 August cash closes; futures, FX and crypto are live at 06:55–07:20 GMT+8 Tuesday. No charts.

The weekend trade, two days on — energy

WTI CRUDE (SEP)

\$80.15 ▼ -0.24%

LIVE 06:58 · Band \$76.49–\$93.01 · TREND now BEARISH

Settled \$80.34, -5.11%, after trading \$78.59. Held the break overnight. Hedgeye downgraded the TREND and holds **no position in crude**.

BRENT CRUDE (OCT)

\$83.70 ▼ -0.08%

LIVE · Settled \$83.77, -4.73%

A reliable live print again after Sunday's stale quote. The Brent-WTI spread at \$3.36 is unremarkable — this is a flat-price move, not a structure move.

ENERGY SECTOR (XLE)

\$58.79 ▼ -1.28%

Hedgeye LONG · Band 56.24–60.52 · Added 28 Jul

Worst S&P sector. Keith: if XLE breaks TREND he sells it, if it holds he adds. 4.5% of downside to the band floor.

OIL REFINERS (CRAK)

\$54.14 ▼ -1.99%

Hedgeye LONG · Band 52.03–56.99 · Added 28 Jul

Worse than the sector. The crack narrowed Monday as gasoline fell as far as crude — the reverse of the weekend. The thesis needs product to hold up.

US — the session that set the record

AMAZON (AMZN)

\$284.02 ▲ +4.58%

Cap \$3.06T · RECORD CLOSE · Reported 30 Jul

\$3 trillion of market value for the first time. Up ~17% on the week, its best since 2015, on AWS +37% and a \$220bn capex guide.

APPLE (AAPL)

\$303.42 ▼ -1.78%

Cap \$4.46T · Reported 30 Jul

The only Mag7 decliner, for a second session. Memory costs and China. The market has now twice declined to look past it.

PALANTIR (PLTR)

\$125.65 ▲ +2.10%

Cap \$301B · ~\$143 after hours (+14%)

Revenue +93%, US commercial +149%, FY26 guide raised to \$8.15bn. Was ~29% YTD going in. Karp: "otherworldly."

ORACLE (ORCL)

\$141.85 ▲ +9.22%

52wk \$114.50–\$345.72 · ~-48% from high

Accelerated into the close from +5.3% at 10:39 EDT. No company news Monday — beta plus the Gemini partnership. A squeeze in a broken name.

The levels

US 10-YEAR YIELD

4.686% ▲ -5.9bp

Mon close · Band 4.61–4.75% · Bullish TREND

Back inside after Friday's break of 4.71%. Fell on a 1.6-point ISM beat — the oil channel beating the growth channel.

US 30-YEAR YIELD

5.23% ▲ -4bp

Mon close · Off Friday's 19-year high of 5.28%

ZB exactly unchanged overnight. Keith flagged a rising MOVE index as the bond market **not** confirming the peace trade, and floated a TLT short.

US DOLLAR (DXY)

99.99 ◆ +0.09%

LIVE · Band 99.70–101.52 · DOWNGRADED to Neutral

Recaptured the floor it broke Sunday — after Hedgeye had already sold UUP. Range 99.42–100.02. Two sessions from initiation to exit.

VIX

15.86 ▲ -0.81%

Mon close · Band 15.09–20.66 · Bearish

0.77 off a floor that was lowered again. Cheapest insurance in a month, into payrolls, AMD, SpaceX earnings and a SpaceX unlock.

GOLD (DEC)

\$4,109.30 ▲ +0.46%

LIVE · Band \$4,002–\$4,147 · NEW HEDGEYE LONG

Settled \$4,090.50, -0.40%. Keith bought last week — first purchase in an extended period — against a ~\$4,101 TRADE breakout. It is \$8 above it.

BITCOIN (BTC)

\$63,522 ◆ +0.04% (24h)

Cap \$1.27T · LIVE 07:10 · ETF flow ~\$75m W/W

Flat for a week. Strategy has moved from not-buying to **selling** — 1,638 BTC for \$104.7m at an average \$63,957.

Tonight and Thursday — the week's two binaries

SPACE X (SPCX)

\$114.53 ▲ +5.68%

Cap \$1.51T · Reports tonight · Unlock Thursday

First-ever results, webcast 04:30 GMT+8 Wed. ~**911.5m shares unlock Thursday** vs an ~\$86bn float and 32.2% short interest. Consensus PT ~\$231.

AMD

\$484.64 ▲ +1.78%

Cap \$790B · Reports after tonight's close

Traded \$515.62 and closed \$476.15 on Friday. The cyclical-semis question Keith drew a line under, put to a vote.

BP

\$44.26 ▼ -2.12%

Cap \$114B · Reports 14:00 GMT+8 today

First major integrated to report into the break. Guided to refining margins +\$1.2–1.4bn q/q on a \$103.85 Q2 Brent. North Sea business up for sale.

SOUTH KOREA (EWY)

\$160.24 ▲ +2.00%

Hedgeye SHORT · Band 141–175 · Kospi -5.12%

The ETF rose 2% on a day the cash index fell 5.12% — New York has already looked through Monday. Morgan Stanley went overweight; Hedgeye stayed short.

SpaceX earnings timing from SpaceX investor relations; lock-up detail from Motley Fool, Investing.com and StartupHub; IPO facts from CNBC.

Data-confidence

CROSS-CHECKS PASSED, and the strongest one is crude. Every live futures row reconciles exactly off Monday's implied settle, and Monday's implied settles reconcile back to the Friday settles published in the 3 August edition: ES 7,519.25 → 7,628.25 → 7,635.50; NQ 28,404.25 → 28,891.75 → 28,947.00; YM 52,635 → 53,334 → 53,425; RTY 2,938.00 → 2,989.30 → 2,995.10; WTI 84.67 → 80.34 → 80.15; gold 4,107.00 → 4,090.50 → 4,109.30; silver 57.786 → 57.86 → 58.37; nat gas 2.747 → 2.781 → 2.770. The WTI chain is the

important one: this brief derived a Monday settle of \$80.34 from Yahoo's live change, and CNBC independently reported the settle as \$80.34, -5.11%. Brent likewise derived to \$83.77 against CNBC's reported \$83.77, -4.73%. Two independent sources agreeing on both legs of the energy complex is the best evidence in this brief that the tape is continuous and the marks are right. Index arithmetic also ties: $7,489.72 + 110.78 = 7,600.50$; $25,373.85 + 540.04 = 25,913.89$ against a published $25,913.90$; $52,485.03 + 693.38 = 53,178.41$; $2,931.34 + 50.57 = 2,981.91$.

RESOLVED — the Sunday brief's earnings-date error. The 3 August edition placed BP, Pfizer and Energy Transfer as reporting on Monday 3 August. All three in fact report on Tuesday 4 August: BP at 07:00 BST (14:00 GMT+8) per its own investor-relations page, Pfizer and Energy Transfer before the US open per their own releases. BP closed Monday -2.12% with the sector and reported nothing. Palantir did report Monday after the close, as stated. The Yahoo-calendar-versus-company-release conflict that this brief has flagged for three days is now closed in favour of the company releases in every case.

WITHDRAWN — the Nvidia \$5 trillion line. Nvidia's market capitalisation is \$5.01trn at Monday's close, but this is not a new milestone and should not be reported as one: Nvidia first crossed \$5trn in late April 2026 and traded materially higher in May. The trillion-dollar milestone that genuinely occurred on Monday was **Amazon's \$3trn, reached for the first time** on a record close. Any reader who carried a "Nvidia crosses \$5trn" note out of Monday's tape should treat it as a conflation.

KNOWN CONFLICTS AND WEAK MARKS. (1) **Treasury yields — two snapshots, both defensible.** This brief carries Yahoo's cash indices: 10Y 4.686%, 30Y 5.23%, 5Y 4.400%, 13-week 3.700%. Those indices timestamp roughly an hour before the cash close. investingLive's session wrap gives 10Y 4.667% (-6.7bp), 5Y 4.387% (-7.2bp), 30Y 5.227% (-4.7bp) and 2Y 4.239% (-5.1bp) at the close. The direction and rough magnitude agree; the levels differ by 1-2bp and the deltas by up to 3bp. The 2-year is carried from investingLive because Yahoo publishes no 2-year index, and its -5.1bp change does not reconcile against the 4.262% Friday close this brief carried from CNBC — $4.262 - 0.051 = 4.211$, not 4.239. **Treat the 2-year level as approximate and the 2-year delta as unreliable.** (2) **USD/KRW delta.** The Seoul close of 1,429.8, 5.8 won weaker, is from Korea Times/Yonhap and is firm. Yahoo's live 1,429.00 shows -0.91%, implying a prior of 1,442.07 — a different reference entirely. The level is firm, the direction implied by the two sources is opposite, and this brief therefore quotes no change figure. (3) **India.** The Sensex is reported +544.39 points to 78,639.03, which is +0.70%; the Nifty 50 is reported +390.70 to 24,774.30, which is +1.60%. Those cannot both be right for the same session. This brief carries the Sensex figure, which Yahoo independently confirms, and omits the Nifty. (4) **Straits Times.** Yahoo gives 5,612.28, -0.29%; a secondary source gives 5,618.34, -0.18%. Yahoo is used. (5) **Sector percentages are SPDR sector ETF closes, not GICS S&P sector index prints.** They are close proxies and were cross-validated against index proxies (DIA +1.32% against the Dow's +1.32%), but they are not the official sector indices. (6) **Snap's after-hours EPS** is not quoted as a beat or miss because CNBC explicitly flagged that the -\$0.10 figure may not be comparable to consensus. (7) **Palantir's after-hours magnitude** varies by timestamp — CNBC printed +12% and then +10%; stockanalysis showed +13.97% at 19:19 EDT. This brief says "roughly 14%" and notes it built through the evening. (8) **Oracle's close** is disputed by one aggregator at +0.88%/\$132.53 against Yahoo, stockanalysis and intraday Motley Fool quotes at \$141.85/+9.22%. The +9.22% is used.

KNOWN GAPS. No Oracle-specific news item dated 3 August was found that explains a 9.22% move; the drivers given — sector beta and the prior week's Gemini partnership — are the best available explanation and no catalyst has been invented to fill the gap. BP's actual Q2 2026 figures were not obtainable ahead of this morning's release, and the search corpus around them is contaminated with 2022 and 2025 results being surfaced as current — **do not trust any BP Q2 number circulating before 14:00 GMT+8 today**; the only BP figures carried here are from BP's own 14 July trading statement. Hedgeye's MOMO Tracker and Crypto Quant bodies are published as images and are quoted from headlines only. No published Nikkei cash pre-open commentary, SGX or GIFT indication was found for Tuesday; the +0.17% Nikkei futures print is the only forward mark in this brief for Tokyo. Whether Monday's Nasdaq close was a record could not be confirmed either way — CNBC named only the Dow as a record and placed the S&P 0.27% below its June high, so **no Nasdaq record is asserted here**. The Kospi's cycle-peak drawdown is quoted as "roughly 31%" from Keith's own commentary rather than computed. Time-of-day for AMD, Eli Lilly, Disney and Caterpillar earnings is unconfirmed against primary sources.

TIMING & UNVERIFIED. This brief was generated at approximately 07:45 GMT+8 Tuesday 4 August off a data snapshot taken 06:55-07:20. All Asian cash markets except New Zealand were closed at capture; Tokyo and Seoul open 08:00; Hong Kong and Shanghai 09:30. US cash equity, ETF and cash-yield levels are Monday closes and are roughly 15 hours old. Overnight futures volume is negligible — 4,780 ES lots, 518 YM lots, 545 RTY lots, 17 Brent lots — and prints on that kind of volume are indications rather than prices. **The central claim underneath this entire tape remains contested by one of the two parties to it:** Iran's foreign ministry said on Monday that no negotiations with the United States are taking place, only talks with Oman about a shipping route which Tehran has repeatedly said is a separate question from the Strait. Trump's account is his own characterisation and he has himself described the Iranian leadership as duplicitous. No ceasefire, timetable or signed instrument exists. Trump has announced halts several times since the war began on 28 February and the June memorandum broke inside five weeks. The joint US-Japan intervention is confirmed by Japan's Ministry of Finance and by Trump directly, but the \$36.58bn size estimate is inferred from central bank data rather than disclosed. The 63% September hike probability is a market-implied figure as of 31 July and will have moved. Warsh's FOMC-frequency proposal is press reporting, not an announced Fed decision. Verify live before acting. This is the **FULL Hedgeye edition** — the logged-in browser was reachable and every Hedgeye product in this brief's entitlements was retrieved.
