

Daily Need to Know

Monday, 14 September 2026 · Pre-market brief

Coverage window, capture method and edition notes are at the back, in section 16.

1 Market snapshot — the close, and where it is trading now

ASSET	LAST	CHANGE	NOTE
US CASH EQUITIES — FRIDAY 11 SEP SETTLE, 49 HOURS OLD. NOT LIVE.			
S&P 500	7,656.98	▲ +0.86% +65.28	Broke a four-day losing streak. High 7,677.02 tagged Hedgeye's TRADE resistance at 7,670 and closed 20 points below it. Still −2.0% from the 52-week high.
Nasdaq Composite	26,333.04	▲ +0.96% +251.31	76.1% of its risk range — the most extended major index against Hedgeye's band. −3.2% from the 52-week high.
Dow Jones	52,573.29	▲ +0.98% +509.19	Closed at 52,573 against a session high of 52,720. Worst index on the week, −1.6%.
Russell 2000	2,903.94	▲ +0.45% +13.00	Opened 2,909.05, ran to 2,926.69, closed below the open and 1.6% off the high. The only major to fade its own rally.
Philadelphia SOX	11,823.998	▲ +1.81% +209.83	Best major index on the day, yet still −19.3% from its 52-week high — the deepest drawdown of any US index shown here bar crypto.
EQUITY FUTURES — LIVE, CAPTURED 06:12:34 GMT+8, 12 MINUTES INTO THE GLOBEX REOPEN. THIN.			
ES (E-mini S&P)	7,620.50	▼ −0.51% −39.00	Settled 7,659.50 Friday. Range 7,604.25–7,623.00 on 4,432 contracts. Real but featherweight.
NQ (E-mini Nasdaq)	29,075.25	▼ −1.06% −311.75	Settled 29,387.00. Twice ES's decline — the reopen is selling duration, not breadth.
YM (E-mini Dow)	52,430	▼ −0.29% −155	Settled 52,585. The shallowest loss of the four; 590 contracts.
RTY (E-mini Russell)	2,895.40	▼ −0.31% −9.10	Settled 2,904.50 on 363 contracts. Small caps are not leading the decline for once.
US TREASURY YIELDS — FRIDAY SETTLE. CASH TREASURIES DO NOT TRADE SUNDAY EVENING GMT+8.			
US 10-year	4.969%	▲ +0.8bp	Session high 4.992% is a fresh 52-week high and sits above Hedgeye's 4.98% ceiling — then closed back inside. 95.2% of band.
US 30-year	5.356%	▼ −1.0bp	High 5.424% Friday; highest long-end levels since 2007 on the week. The only yield lower on the day.
US 5-year	4.788%	▲ +2.8bp	High 4.940%. The belly took the CPI hit.
US 2-year	4.630%	▲ +4.4bp	Closed 2.7bp off a 52-week high of 4.657%. The Fed front-runner, priced for a hike on Wednesday.
13-week bill	4.012%	▲ +6.0bp	Biggest yield move on the curve. Through 4% for the first time in the 52-week window.
ENERGY — LIVE FUTURES, 12 MINUTES OF GLOBEX. THIS IS THE ROW THAT CHANGED OVER THE WEEKEND.			
WTI crude (CL1!)	\$102.73	▲ +2.68% +2.68	Settled \$100.05 Friday after easing back. Gapped straight through to 98.2% of the Hedgeye band (was 79.7% at the settle). Ceiling \$102.99.
Brent crude (BZ1!)	\$107.30	▲ +2.57% +2.69	Settled \$104.61. Brent-WTI spread \$4.57. 227 lots — a gap, not a grind.
Natural gas (NG1!)	\$2.861	▲ +1.06% +0.030	Mid-band at 53.9%. The only energy contract not straining its ceiling.
RBOB petrol (RB1!)	\$3.3622	▲ +1.66% +0.055	Printed the session high on the capture. Retail diesel already set a record Friday.
METALS — LIVE SPOT, ~72 MINUTES SINCE THE 05:00 GMT+8 FX/METALS REOPEN. HEDGEYE MEASURES THESE ON SPOT.			
Gold spot	\$4,331.40	▼ −0.40% −17.26	Range \$4,323.79–4,347.64. Falling while crude gaps up — no haven bid; this is a real-yield tape. 24.7% of band, below KM's \$4,380 momentum level.
Silver spot	\$63.834	▼ −1.00% −0.647	56.7% of a <i>bearish</i> band. Hedgeye exited SLV on Friday.
Copper spot	\$6.39494	▼ −0.70% −0.0452	9.2% of band — the single most stretched instrument toward its floor anywhere in the Hedgeye set.
FX — LIVE BUT ONLY ~72 MINUTES OLD; MAJORS' RANGES ARE NOISE-WIDTH. ASIAN CROSSES ARE FRIDAY'S ONSHORE CLOSURES.			
DXY	99.100	◆ +0.01%	Range 99.073–99.103 — three ticks. This is not a move, it is an absence of one. 55.1% of a bearish band.
USD/JPY	153.488	◆ +0.01%	12.7-pip range. Level matters, change does not. 10.5 yen below the 52-week high.
USD/KRW	1,341.50	◆ −0.53% (Fri)	Friday's onshore close, not live. 13.2-won range belongs to Friday's session. Seoul reopens 08:00 GMT+8.

VOLATILITY AND CRYPTO — VIX IS FRIDAY'S SETTLE; CRYPTO IS THE ONLY GENUINELY 24-HOUR ROW IN THIS TABLE.

VIX	15.85	▼ -11.20%	-2.00	Largest single-day percentage move in the table. Thursday's panic hedging unwound within 24 hours. 34.2% of a neutral band.
Bitcoin	\$76,906.99	▼ -0.47%	-365	Genuinely live. Range \$76,517.78-77,431.60. -39.1% from the 52-week high of \$126,230 — the worst drawdown on this page.

Colour key: ▲ green = higher, ▼ red = lower, ◆ amber = change inside the noise band. Cash equity and Treasury rows are Friday 11 September settles. Futures, spot metals, FX majors and crypto are live prints captured 06:12:34-06:12:37 GMT+8. Futures-to-cash basis reconciles on all four contracts (ES +2.52, YM +11.7, RTY +0.56 versus cash), confirming the settle labels. Yahoo Finance rate-limited this run; the three headline index closes were cross-checked against the Associated Press wire tally. Full reconciliation in section 18.

TL;DR

Friday's rally is already being unwound. US stocks broke a four-day losing streak on Friday — S&P +0.86%, Nasdaq +0.96%, Dow +0.98% — because crude eased and August CPI landed close to consensus. Over the weekend US and Iranian forces traded strikes on tankers in and around the Strait of Hormuz, Iran's parliament speaker declared the era of "proportionate responses" over, and Globex reopened twelve minutes ago with **WTI +2.68% at \$102.73** and **Nasdaq futures -1.06%**. Crude is now at 98.2% of its Hedgeye risk range having been at 79.7% on Friday's settle. Gold is down 0.40% into that, which tells you this is a real-yield event, not a haven event: the 2-year closed at 4.630%, 2.7bp from a cycle high, and the 10-year printed a fresh 52-week high of 4.992% intraday before closing at 4.969%, just under Hedgeye's 4.98% ceiling. Both the S&P and the 10-year tagged their signal levels on Friday and closed back inside — a failure at resistance in two markets at once. The FOMC decides on Wednesday with roughly 85-90% of a 25bp hike priced, which would take the target range to 3.75-4.00%. Asia opens into a worse set-up than it closed with.

2 The big picture — what it means

The weekend repriced the one input the Friday rally depended on. Friday's bounce was explicitly an oil bounce: crude eased from its spurt, CPI came in near consensus, and nine of eleven S&P sectors closed higher. WTI settled at \$100.05, a full \$2.94 below the Hedgeye ceiling. Twelve minutes into the Globex reopen it is \$102.73 — 26 cents from that ceiling and 2.68% above the settle on 2,780 lots. The reason for Friday's relief no longer holds, and equity futures have already said so.

Nasdaq futures falling twice as fast as S&P futures is the tell, and it is a rates tell. NQ -1.06% against ES -0.51%, YM -0.29% and RTY -0.31% is not a risk-off pattern — in a genuine risk-off, small caps lead lower. It is a duration pattern. Long-dated cash flows are being marked down because the market is pricing a higher path for the funds rate three days before the Fed decides. The 2-year at 4.630% closed 4.4bp higher on a day the equity market rallied nearly 1%, which is the same message in a different instrument.

Gold declining into a Middle East escalation is the most informative single price this morning. Spot gold is \$4,331.40, down 0.40% since the metals reopen, while crude gaps 2.7% higher on tanker strikes. Gold does not behave that way in a geopolitical risk event; it behaves that way when real yields are the binding constraint. Hedgeye has the position at minimum size pending a recapture of \$4,380, and the metal is instead sitting at 24.7% of its band. If the escalation were the dominant variable, gold would be the first thing bid.

Two markets tagged their signal level on Friday and failed at it. The S&P's high of 7,677.02 cleared Keith McCullough's stated immediate-term TRADE resistance of 7,670 and closed at 7,656.98 — twenty points back inside. The 10-year's high of 4.992% cleared the 4.98% top of the risk range, a level McCullough flagged as the 2023 stopping point, and closed at 4.969%. Rejections at resistance in equities and rates on the same session, from opposite directions, is a market that has found the edges of its range rather than broken out of it.

Credit is the deterioration nobody led with. High-yield spreads widened to roughly 266 basis points and corporate yields rose about 12bp on Thursday, with Hedgeye's Ryan Pat Kelly saying McCullough had moved high yield to neutral and may have turned it bearish that morning — explicitly unconfirmed. HYG sits at 78.60 against a 52-week low of 78.565: three-and-a-half cents above the lowest print of the year. Small caps and high yield are historically joined at the hip, and the Russell closed Friday below its own opening print despite a broad rally.

The volatility complex has already given back Thursday's fear, which removes a cushion. VIX fell 11.20% to 15.85 on Friday after Thursday's episode in which, per McCullough, short-dated calendar vol went from 10 to 20 and SPX implied vol reached a 58% premium to 30-day realised. Buying protection after four down days and selling it after one up day is the opposite of getting ahead of the move. The market enters an FOMC week with a 15-handle VIX, crude gapping, and a hike roughly nine-tenths priced.

The inflation print itself was a smaller event than the energy pass-through behind it. Headline CPI matched at +0.4% month-on-month and 3.4% year-on-year; core was one-tenth hot at +0.3%. But petrol rose 3.9% in the month, is 27.4% higher year-on-year, and accounted for over a third of the monthly all-items increase. National average diesel hit \$6.05 a gallon on Friday, the first print above \$6 and 60% higher than a year ago against a prior record of \$5.82 set in June 2022. That is not a data point that mean-reverts on its own while Hormuz traffic runs at roughly ten ships a day.

3 Rates, currencies & commodities

- **The curve bear-flattened at the front and steepened nowhere.** 2-year +4.4bp to 4.630%, 5-year +2.8bp to 4.788%, 10-year +0.8bp to 4.969%, 30-year -1.0bp to 5.356%. 10s2s closes at **33.9bp** and 30s10s at 38.7bp. The

13-week bill rose 6.0bp to 4.012% — the largest move on the curve and the clearest statement that the front end is repricing the September meeting, not the cycle.

- **The 10-year's 4.992% intraday high is the level to watch, not the close.** McCullough: the top of the risk range is 4.98%, "which is where it stopped going up in 2023 — if it closes at a higher-high than that, the 5.29% level of 2007 that got me calling for the 2008 stock market crash is in play". Friday cleared it intraday and did not close there. That distinction is the entire near-term rates trade.
- **The dollar did nothing, and did it convincingly.** DXY 99.100 on a three-tick range since the reopen. It sits at 55.1% of a *bearish* Hedgeye band whose ceiling is 99.67 — so the dollar has spent the last several sessions in a countertrend bounce that Hedgeye's Kelly described as fading. USD bullish (UUP) was added to Hedgeye's bearish ETF list on 11 September.
- **Asian FX is stale, and the gap matters this morning.** USD/KRW 1,341.50 and USD/TWD 31.605 are Friday onshore closes, roughly 49 hours old. The won firmed 0.53% on Friday while the KOSPI broke below 7,000. If crude holds \$102 into the Seoul open at 08:00 GMT+8, that Friday won strength is the first thing at risk.
- **Crude's physical market is doing the talking.** Kelly flagged an unusually large Dubai-over-Brent premium as evidence of physical tightness, framing it as binary: either Dubai collapses or Brent has further upside. Brent is \$107.30 this morning. Hormuz is carrying roughly ten commodity ships a day, against a chokepoint that handled about 10% of the world's seaborne diesel before the conflict.
- **Copper at 9.2% of its band is the industrial-demand warning inside a commodity rally.** Spot copper \$6.39494, 0.70% off its Friday reference and only 0.70% above Hedgeye's \$6.35 floor on a *bullish* band. Energy is ripping and the industrial metal is sitting on its floor — the two do not usually diverge this far unless the market is pricing an energy shock rather than a growth impulse.
- **Wheat fell 2.16% to 725.25 on 88,251 lots**, the heaviest volume of any contract captured. Hedgeye added WEAT and CORN to its bullish ETF list on 4 and 9 September respectively; Friday's ags move went against both.

4 Hedgeye — regime, risk ranges & the Quad path

Edition: full logged-in feed reached. **The live risk-range set is Friday's Early Look**, "Front-Running the Fed's Inflation Problem" by Ryan Ricci, published 11 Sep 08:04 EDT = **20:04 GMT+8 Friday 11 September**. Hedgeye does not publish an Early Look at weekends, so this is a genuine carry-forward and no newer set exists. Monday evening's Early Look (~20:00 GMT+8 today) supersedes it. Levels are therefore roughly **58 hours old** and were struck before the weekend escalation.

Macro dashboard

ITEM	HEDGEYE'S READ	PUBLISHED
Inflation nowcast	August at ~3.5% versus street low-3.4%; a further ~10bp acceleration into September against a flat street; Q4 flat and sticky-high. The actual August print was 3.4% — the street was right and Hedgeye was ~10bp high.	11 Sep 20:04
Policy frame	Growth + Inflation = policy. Accelerating, sticky inflation into year-end implies "a higher probability of rate hikes into the end of the year".	11 Sep 20:04
Working	Commodities (oil and ags), energy equities, long rates / short bonds, select international.	11 Sep 20:04
Not working	Russell, growth, momentum, industrials, retail, China tech, bonds, utilities.	11 Sep 20:04
Rates positioning	Core rate-sensitive shorts — TLT, ZROZ, LQD, JOJO, XLU — cut to minimum size ahead of CPI on short-term overbought yields.	11 Sep 22:10
Metals positioning	Silver (SLV) exited . Gold held at minimum, needs \$4,380 to be added to. Gold Miners (GDX) retained on stronger signal strength than gold itself.	11 Sep 22:10
Credit	High yield moved to neutral, possibly bearish that morning — explicitly unconfirmed . HY spreads ~266bp; corporate yields +12bp the prior day; CCC around 15%.	11 Sep 22:10
Equity signals	SPX immediate-term TRADE resistance 7,670 . Russell 2000 (IWM) bearish TRADE and TREND.	11 Sep 20:30
Momentum tape	MOMO Tracker headline: Mag7 -0.2%, TESLA bearish , SKEW steepening, fragility rising, 6 of 9 risk ranges with upside greater than downside.	11 Sep 20:30
ETF Pro Plus	Newest weekly report published 13 Sep 18:09 EDT = 14 Sep 06:09 GMT+8 — three minutes before this capture, on Sunday. 24 bullish, 13 bearish. Newest bullish: VFLO and EWZ (11 Sep). Newest bearish: INDA and UUP (11 Sep).	14 Sep 06:09
Signal Strength Stocks	61 names. Added: META, MRVL, AAPL . Removed: DGX, SXT, GTBIF, TGT, SN, FRPT, FCX, TSCO, GO, CAH, FSK, SNDL.	11 Sep 03:03
Quad path	No explicit Quad path notation was seen in any publication read this morning. The path lives in the US Monthly Quad Forecast inside the Macro Week Summary Notes, which is behind a separate link that returns only a table of contents. No assertion is made about the path or whether it changed. Absence of a printed path is not evidence the path is unchanged.	—

Risk Range™ Signals — Friday 11 September Early Look, measured against this morning's prints

INSTRUMENT	IMMEDIATE-TERM RANGE	TREND	NOW	WHERE IT STANDS
UST 10-year yield	4.75 - 4.98%	bullish	4.969%	

				95.2% of band. 0.22% from the ceiling; Friday's 4.992% high printed <i>above</i> it. Friday settle.
High Yield (HYG)	78.25 – 79.20	bearish	78.60	36.8%. Sitting 3.5 cents above a 52-week low of 78.565.
Inv. Grade Corp (LQD)	104.10 – 105.80	bearish	104.32	12.9% — pinned near the floor, and the floor is also the 52-week low (104.31).
S&P 500 (SPX)	7,565 – 7,730	bullish	7,656.98	55.7%. Mid-band and unremarkable; the signal is the 7,670 TRADE-resistance failure, not the range.
NASDAQ Comp (COMPQ)	25,799 – 26,501	bullish	26,333.04	76.1% — the most extended index in the set, 0.64% from its ceiling, with NQ futures –1.06% overnight.
Russell 2000 (RUT)	2,875 – 2,970	bearish	2,903.94	30.5%. Only 1.00% above the floor on a bearish TREND.
Health Care (XLV)	163 – 175	bullish	165.36	19.7%. Fell 0.18% Friday while nine sectors rose — a bullish band the tape is not honouring.
Tech Software (IGV)	99 – 111	bullish	101.52	21.0%. Price from the 13 Sep ETF Pro Plus report, not the 06:12 capture.
Oil Services (OIH)	415 – 440	bullish	420.67	22.7%. The cheapest expression of the energy call in the set. ETF Pro Plus price.
Volatility (VIX)	14.33 – 18.77	neutral	15.85	34.2% after an 11.2% collapse. 9.6% above the floor going into FOMC week.
US Dollar (USD)	98.40 – 99.67	bearish	99.100	55.1%. Countertrend bounce mid-band; live but on a three-tick range.
WTI crude — continuous	88.51 – 102.99	bullish	102.73	98.2% — the story of the morning. Was 79.7% at Friday's \$100.05 settle. 0.25% from the ceiling. Live.
Nat gas — continuous	2.71 – 2.99	bullish	2.861	53.9%. Live, mid-band, the calmest energy row.
Gold — spot	4,275 – 4,503	bullish	4,331.40	24.7%, and 1.11% below the \$4,380 momentum level McCullough requires before adding. Live spot.
Copper — spot	6.35 – 6.84	bullish	6.39494	9.2% — the most floor-pinned instrument in the table, on a bullish band. Live spot.
Silver — spot	61 – 66	bearish	63.834	56.7%. Hedgeye exited SLV on Friday; the band is bearish and price is above mid. Live spot.

*Metals are measured on spot (TVC:GOLD, TVC:SILVER, OANDA:XCUUSD) and energy on the continuous contract (NYMEX:CL1!, NYMEX:NG1!), matching the series Hedgeye's published lines name. IGV and OIH are taken from the 13 September ETF Pro Plus report because neither was in the 06:12 capture universe; they are dated 13 September, not live. **Band moves versus the previous session's Early Look are UNKNOWN.** The Early Look category page does not paginate — page 2 and page 3 return the identical note — and no alternative route to the Thursday 10 September note was found this morning. The bands above are not stated to be unchanged; they are simply the only set observed.*

What Keith actually said

From *Hedgeye's Top 3 Things*, signed KM, published 11 Sep 08:30 EDT = **11 Sep 20:30 GMT+8**:

- "Every Macro Tourist on the planet is now 'worried' about inflation and Bond Yields - thanks for coming out..."
- "I've covered my Core Rate Sensitive Short Positions (TLT, ZROZ, LQD, JOJO, XLU) down to their MIN position sizes with Bond Yields signaling short-term #overbought; as opposed to Bessy's dreams, The Bond Market is the real 'house'"
- "to get my Gold position up from its MIN position size I need Gold to recapture its immediate-term TRADE Momentum Signal Level of \$4380; textbook signaling process got us out of Silver (SLV) on time and it kept us in Gold Miners (GDX) which have stronger Signal Strength than Gold itself"
- "Macro Tourists decided to panic-buy SPY puts yesterday, taking short-dated Cal Vol (see Tier1 Alpha report) straight up from 10 to 20 and implied vol on SPX straight up to a +58% PREMIUM vs. 30-day realized vol"

From *The Macro Show*, 10 Sep 13:22 EDT = **11 Sep 01:22 GMT+8**, on Washington floating a \$1trn plan to send Americans \$5,000 cheques ahead of the midterms:

- "Don't believe these politicians. Believe the bond market. Believe the prices."

Not quoted: the Friday Macro Show summary notes are marked "SUMMARY HAS BEEN ENHANCED BY AI AND MAY CONTAIN ERRORS" and carry Hedgeye's own error caveat. Everything drawn from them in this brief — the credit deterioration, the Dubai-Brent premium, the energy-adjusted liquidity argument — is reported as attributed summary of Ryan Pat Kelly and Macnamara, outside quotation marks, and is not presented as McCullough's words.

5 Mag7 scoreboard

NAME	LAST	DAY	CAP	READ
Nvidia	218.29	▼ -0.03%	\$5.261T	The only Mag7 name lower, on the day SOX rose 1.81%. Opened 221.24, faded all session. Largest company on earth and it did not participate.
Apple	332.27	▲ +1.75%	\$4.849T	Best Mag7 performer and added to Hedgeye's Signal Strength Stocks on Friday. 3.6% from a 52-week high.
Alphabet	338.50	▲ +1.77%	\$4.123T	Range 335.03–342.98, closed mid-range. Still –17.2% from its 52-week high of 408.61.
Microsoft	495.63	▲ +0.65%	\$3.680T	Underperformed the Nasdaq. Held the 495 line; –10.5% from the 52-week high.

Amazon	256.78	▲ +1.94%	\$2.770T	Biggest Mag7 gain in percentage terms, closing near the session high of 257.59.
Meta	648.03	▲ +0.57%	\$1.651T	Opened 653.51, ran 664.24, closed 648.03 — faded 2.4% off the high and finished below the open. Added to Signal Strength Stocks the same day.
Tesla	365.44	▲ +0.52%	\$1.443T	Hedgeye's MOMO Tracker flags TSLA = BEARISH . –26.7% from a 52-week high of 498.83, the deepest Mag7 drawdown.

Combined capitalisation **\$23.777trn**. Hedgeye's MOMO Tracker put the Mag7 basket at –0.2% on Friday morning; by the close the group was broadly higher, with Nvidia the lone decliner. Market caps are TradingView's market_cap_basic field at the Friday close, single-sourced.

6 Positioning & options

- **The hedge was bought at the low and sold at the high, within 48 hours.** Thursday: four consecutive down days, panic put-buying in SPY, short-dated calendar vol from 10 to 20, SPX implied vol at a 58% premium to 30-day realised. Friday: VIX –11.20% to 15.85. That protection was paid for at the worst moment and released at the best one.
- **SKEW is steepening while fragility rises** — Hedgeye's MOMO Tracker headline for Friday morning. Steepening skew with a 15-handle VIX means the market is cheapening at-the-money vol while paying up for tails. That is the shape you want going into an event, and it is not the shape a 34%-of-band VIX suggests on its own.
- **Six of nine momentum risk ranges had upside greater than downside** on Friday morning per the same tracker. The underlying table is published as images and its text could not be extracted, so the specific names behind that 6/9 are not available to this brief.
- **Hedgeye's rate-sensitive shorts are at minimum size going into the meeting.** TLT, ZROZ, LQD, JOJO and XLU were all cut ahead of CPI on overbought yields. That is a deliberate reduction in risk, not a change of view — Kelly flagged it as a reset that could allow those shorts to be rebuilt if signals turn. It means the most-followed bearish-bond book on the street has the least exposure it has had in weeks, three days before the Fed.
- **Credit is where positioning risk is concentrated.** HY spreads ~266bp and widening; LQD at 12.9% of its band with the floor equal to the 52-week low; HYG three-and-a-half cents off its own 52-week low. Kelly drew the small-cap link explicitly: when high-yield yields rise and spreads widen, small caps have historically suffered disproportionately. The Russell closed below its open on Friday.
- **The 60/40 hedge is being questioned by the people who run it.** Kelly's energy-adjusted liquidity framing — that expensive oil drains liquidity because the economy gets no extra output for the higher barrel price — led to an explicit 2022 comparison, when stocks and bonds fell together. He did not forecast a repeat; he argued the negative stock-bond correlation cannot be assumed. With WTI back above \$102 this morning, that is a live question rather than an academic one.
- **Bitcoin's position sizing, not its direction, was the Hedgeye discussion.** Macnamara's argument was that Bitcoin's volatility consumes a disproportionate share of a portfolio's risk budget even at a 1–4% allocation, making static weights less useful than dynamic signal-driven sizing. No new Bitcoin position call was made. IBIT sits on the bullish ETF list from 2 September with a trend range of \$41.92–46.36 against a \$43.77 mark.

7 Sector rotation — leaders & laggards

SECTOR (SPDR)	CLOSE	DAY	NOTE
Technology (XLK)	187.67	▲ +1.32%	Led. Closed 187.67 against a high of 188.64; post-market flat.
Industrials (XLI)	172.37	▲ +1.07%	Second-best — and Hedgeye added XLI to its <i>bearish</i> list on 8 September. A short under pressure.
Communications (XLC)	112.60	▲ +0.99%	Alphabet and Meta did the work.
Consumer Discretionary (XLY)	112.96	▲ +0.89%	Closed near the high. Amazon carried it.
Real Estate (XLRE)	43.42	▲ +0.86%	Rallied on a day the 30-year fell 1bp — the only rate-sensitive sector that benefited.
Financials (XLF)	57.25	▲ +0.67%	Range 56.955–57.615, closed mid. 2.3% from the 52-week high.
Materials (XLB)	50.95	▲ +0.37%	Lagged the tape despite the commodity bid — copper is on its floor.
Staples (XLP)	83.38	▲ +0.35%	Defensive, participated modestly.
Energy (XLE)	65.14	▲ +0.32%	The anomaly. Third-weakest sector on Friday because crude <i>fell</i> ; it closed 0.32% higher while sitting 1.6% from a 52-week high. Crude is now +2.68% overnight.
Utilities (XLU)	42.39	▼ –0.31%	Lower on a broad up day. On Hedgeye's bearish list since 12 August; 1.6% above its 52-week low.

Health Care (XLV) 165.36 ▼ Weakest sector. UNH -2.37%, LLY -0.65%, JNJ -0.29%. Hedgeye is *bullish* XLV -0.18% and the band is bullish; the tape disagrees.

- **Leaders:** Technology, Industrials, Communications — all above +0.99%. Nine of eleven sectors closed higher.
- **Laggards:** Health Care and Utilities, the only two lower. Energy was third-weakest, which will not survive contact with \$102.73 crude.
- **The rotation to watch today is energy against technology.** Friday's leadership was built on crude falling; the overnight tape has crude gapping and NQ futures down 1.06%. If that holds into the US open, Friday's sector table inverts almost line for line — XLE and XLK swap ends.
- **Equal-weight kept pace.** RSP +0.80% against SPY +0.85%: breadth was genuine, not five names. That is the one constructive fact in Friday's tape.

8 Forward — futures & the week ahead

Globex reopened at 06:00 GMT+8 and this capture was taken at 06:12:34 — twelve minutes of trade, 4,432 ES contracts, 2,333 NQ, 590 YM, 363 RTY. Those are tiny numbers and the changes should be read as a repricing gap rather than a trend: the market opened lower and has not yet had time to do anything else. What it does say is directionally unambiguous. **Every equity contract is below Friday's settle and the Nasdaq contract is down twice as much as the S&P's, while WTI is 2.68% higher and Brent 2.57% higher.** The Friday equity rally was explicitly attributed to crude easing; crude has un-eased. Gold is down 0.40% into that, so the overnight bid is going into energy and out of duration, not into havens. Bitcoin — the only instrument that has traded continuously all weekend — is off 0.47% at \$76,907 with a \$914 range, which is an orderly drift rather than a liquidation. The single number to watch at the US open is **WTI \$102.99**, Hedgeye's band ceiling: crude is 26 cents below it.

DAY (GMT+8)	KEY EVENTS
Mon 14 Sep	Light US calendar. Asia repricing the weekend: Tokyo and Seoul 08:00-08:30, Hong Kong 09:30, India 12:15. Hedgeye Early Look and Macro Show ~20:00-20:30 GMT+8 — the risk ranges in section 4 are superseded tonight.
Tue 15 Sep	FOMC meeting begins (day 1 of 2). Empire State manufacturing (Sep) and ADP weekly employment change, ~20:15-20:30. Trip.com Q2 results after the US close.
Wed 16 Sep	Retail sales (Aug) , import and export price indices, ~20:30 — the import-price line is the direct energy pass-through read. NAHB housing market index ~22:00. Lennar Q3: consensus looks for EPS -35% year-on-year on revenue -4.5% to \$8.4bn, with the 30-year mortgage above 7%.
Thu 17 Sep	02:00 — FOMC decision, statement and Summary of Economic Projections including the dot plot. 02:30 — Chair Warsh press conference. Roughly 85-90% of a 25bp hike is priced, taking the target range from 3.50-3.75% to 3.75-4.00%. Housing starts and permits (Aug) ~20:30.
Fri 18 Sep	Initial jobless claims and Philadelphia Fed manufacturing ~20:30; Conference Board leading index ~22:00. Quadruple witching — quarterly index and single-stock option and futures expiry.

*Calendar times converted from ET at GMT+8 = ET + 12h (US daylight time). The FOMC date, the current 3.50-3.75% target range and the Lennar and Trip.com reporting dates were confirmed against multiple reports; the precise release times for the daily US data are taken from secondary calendars and are **unconfirmed** against the releasing agencies. One secondary calendar listed housing starts as "Wednesday, September 17", which is internally contradictory because 17 September is a Thursday; it is shown here on Thursday 17 September and the day should be treated as provisional.*

9 Corporate news

- **Oracle gave back a 7.5% opening gain and closed down 1.74% at \$150.28.** The stock traded as high as \$165.99 and as low as \$149.84 — a 10.1% intraday range — on roughly 78.5m shares, about 2.5 times its three-month average. It then printed \$147.81 in the post-market, another 1.64% lower. Reporting attributes the reversal to capital-expenditure concern rather than demand: the operating momentum was welcomed, the capital required to produce it was not. Oracle is now **54.4% below its 52-week high of \$329.50**. A Forbes piece dated 12 September reported Ellison cancelling a \$7.5bn sale with the company still burning cash.
- **Cisco rose 4.37% to \$112.13, the best large-cap move of the session.** Fiscal Q4 revenue of \$17.252bn was up 18% year-on-year and roughly 2.4% above consensus, driven by AI networking demand as enterprise and hyperscale customers pull forward network upgrades. Average analyst targets moved toward \$130.
- **Memory and storage went the other way while semis rallied.** SOX +1.81%, but SanDisk -3.50% to \$1,633.35 and Western Digital -2.98% to \$447.18, with Micron -0.22%. Three of the biggest storage names fell on a day the semiconductor index had its best session of the week. That divergence — logic up, storage down — is worth more attention than the index print.
- **AMD +2.49% to \$516.13 and Intel +2.61% to \$102.94** led the semis higher. Applied Materials added 0.55% to \$456.49 but remains 38.3% below its 52-week high of \$739.67.
- **Health care was sold into strength.** UnitedHealth -2.37% to \$379.09 on a session high of \$391.73; Eli Lilly -0.65%; Johnson & Johnson -0.29%. UNH closed 1.1% above its own session low.
- **Netflix +1.83% to \$77.40 and Tapestry +2.26% to \$118.49** were the notable mid-cap gainers. Workday added 0.33% to \$185.70 but faded from a \$188.57 high and slipped a further 0.39% after hours.
- **M&A flow ahead of the week:** roughly \$600bn of announced deals were still pending as of August, headed by Paramount Skydance's \$110bn offer for Warner Bros Discovery at \$31.00 a share. Early-September

announcements included Tata Motors for Iveco Group (7 Sep) and a \$3.9bn reverse merger between WaFd and EverBank (8 Sep). No new weekend deal of comparable size was identified.

10 Macro data

- **August CPI, released Friday 11 September, 20:30 GMT+8. Headline +0.4% month-on-month, consensus +0.4% — in line. Headline 3.4% year-on-year, consensus 3.4% — in line**, against 3.36% the prior month. The acceleration was expected and it arrived.
- **Core CPI +0.3% month-on-month against a +0.2% consensus — one-tenth hot. Core 2.4% year-on-year, consensus 2.4% — in line.** The month-on-month core miss is the reason the front end moved: the 2-year added 4.4bp and the 13-week bill 6.0bp on an otherwise risk-on session.
- **Petrol rose 3.9% in the month and is 27.4% higher year-on-year, accounting for over a third of the entire monthly all-items increase.** Strip energy out and August was a benign report; you cannot strip it out while Hormuz is closed to most traffic.
- **Hedgeye's own nowcast had August at ~3.5% against a street at low-3.4%. The print was 3.4%.** The street was right and the nowcast was roughly 10bp high. Hedgeye's forward call — a further ~10bp acceleration into September against a flat street consensus, then flat and sticky through Q4 — is unaffected by that single miss but has not yet been tested.
- **National average diesel reached \$6.05 a gallon on Friday**, up from \$5.85 a week earlier. It is the first print above \$6, against a prior record of \$5.82 set in June 2022, and is 60% higher than a year ago. Regular unleaded averaged \$4.29 against \$2.98 before the conflict. Roughly 10% of the world's seaborne diesel transited Hormuz pre-conflict.
- **Headline PCE ran 3.7% year-on-year in July with the energy component up 15.3% —** the reading the Fed actually targets, and it is running three-tenths above the CPI headline.
- **August PPI, released Thursday 10 September, was characterised across multiple reports as hotter than expected** and is credited with pushing long-dated yields to new multi-decade highs. The specific actual-versus-consensus figures were not verified this morning and are not printed here.
- **Rate expectations: roughly 85-90% of a 25bp hike is priced for Wednesday**, up from about 70% before CPI and 49.4% a week earlier. Estimates in circulation ranged from 79.5% on prediction markets to "nearly 90%" on CME FedWatch. EY-Parthenon moved from hold to hike. The current target range is 3.50-3.75%.

11 Geopolitics

- **▲ US forces struck three Iranian oil tankers on Saturday**, according to reports of the weekend action. Iran's Islamic Revolutionary Guard Corps said it had struck three tankers and three US-linked vessels in other areas. Both sets of claims are the parties' own; neither has been independently confirmed in what this brief could read this morning.
- **▼ Mohammad Bagher Ghalibaf, Iran's parliament speaker and chief negotiator, said in a speech posted to Telegram on Sunday that "the era of 'proportionate responses' is over"**, describing recent Iranian strikes on US bases in the region as "only the beginning" and warning that transgressions would draw a "faster, heavier, and more painful" response. That is the sentence the futures market opened on.
- **◆ Hormuz traffic has collapsed to roughly ten commodity ships a day** averaged over the past ten days. The chokepoint is not closed, but it is running at a fraction of normal throughput, and that is a physical fact rather than a claim by either side.
- **◆ The conflict began on 28 February 2026** and has now run six and a half months. Brent is up more than 16% over the past month. The Dubai-over-Brent premium is unusually wide, which Hedgeye reads as physical tightness rather than speculative positioning.
- **◆ The escalation is arriving three days before an FOMC meeting** at which the Fed is expected to hike into an energy shock. That is the least comfortable possible sequencing: the central bank has no instrument that addresses a supply-side oil price, and tightening into it raises the growth cost without touching the cause.
- **◆ Domestically, Washington floated a \$1trn plan to send Americans \$5,000 cheques ahead of the midterms**, reported by Hedgeye on 10 September. The 30-year yield reached its highest level since 2007 in the same week. Fiscal expansion and a hawkish Fed pulling in opposite directions is the structural story underneath this week's tactical one.

12 Overnight setup — what Asia opens into

INSTRUMENT	LIVE LEVEL	CHANGE	VOLUME / RANGE
ES — E-mini S&P	7,620.50	▼ -0.51%	4,432 · 7,604.25-7,623.00
NQ — E-mini Nasdaq	29,075.25	▼ -1.06%	2,333 · 28,990-29,111
YM — E-mini Dow	52,430	▼ -0.29%	590 · 52,226-52,570
RTY — E-mini Russell	2,895.40	▼ -0.31%	363 · 2,888.8-2,898.6
USD/JPY	153.488	◆ +0.01%	1,564 · 12.7 pips
USD/KRW (Friday close)	1,341.50	◆ -0.53% (Fri)	Friday session, not live
USD/TWD (Friday close)	31.605	◆ -0.12% (Fri)	Friday session, not live

USD/CNH	6.70669	◆ +0.04%	614 · 2.1 pips · 52-week low 6.70286
EUR/USD	1.15948	◆ -0.03%	2,675 · 6.9 pips
Gold spot	\$4,331.40	▼ -0.40%	\$4,323.79-4,347.64
Silver spot	\$63.834	▼ -1.00%	\$63.79-64.46
Copper spot	\$6.39494	▼ -0.70%	\$6.3915-6.4175
WTI crude	\$102.73	▲ +2.68%	2,780 · \$101.59-102.74
Brent crude	\$107.30	▲ +2.57%	227 · \$106.03-107.35
Bitcoin	\$76,906.99	▼ -0.47%	\$76,517.78-77,431.60
Ether	\$2,490.34	▼ -1.40%	\$2,462.22-2,527.13

- **Asia closed Friday badly and is being handed something worse.** Previous closes, all Friday 11 September: Nikkei 225 **64,011.12 -1.93%**, KOSPI **6,909.92 -1.76%** — below 7,000 for the first time in months — Shanghai Composite **3,888.11 -1.18%**, ASX 200 **8,741.20 -0.89%**, Hang Seng **24,805.64 -0.60%**, Sensex **74,781.76 -0.16%**. Every one of those is a previous close, roughly 26 to 40 hours old depending on the market.
- **The US tape hands Asia technology leadership that the overnight session is already selling.** XLK +1.32% and SOX +1.81% were Friday's story; NQ futures are -1.06% now. Tokyo and Seoul open into a semiconductor complex that rallied in New York and is being marked down in Chicago.
- **Korea is the market most exposed to the reversal.** KOSPI broke 7,000 on Friday, the won firmed 0.53% into that break, and Korea is a net energy importer facing \$107 Brent with a currency mark that is 49 hours stale. Seoul reopens at 08:00 GMT+8 with both the index level and the FX level to reset at once.
- **Japan's problem is different and larger.** The Nikkei's 1.93% fall was the worst in the region and USD/JPY at 153.49 gives no cushion; a further yen-weak move on crude would import the energy shock directly. Japan is open today — Respect for the Aged Day falls on 21 September this year, not today.
- **USD/CNH at 6.70669 is 0.06% above its 52-week low of 6.70286.** A yuan at the strong end of a year's range going into an oil shock is an odd combination and the single most likely FX row to break out of its range today.
- **The instrument most likely to move is crude, and it will move the equity indices through it.** WTI is 26 cents from the top of its Hedgeye band. A close above \$102.99 would put the energy complex outside its range with the Fed hiking into it on Wednesday.

13 AI watch

- **Friday priced AI infrastructure demand and AI infrastructure funding in opposite directions, in the same session.** Cisco +4.37% on AI networking revenue that beat by 2.4%; Oracle -1.74% after a +7.5% open, on the capital required to serve the same demand. The market is no longer paying indiscriminately for AI exposure — it is separating the companies that *sell* the buildout from the companies that *fund* it.
- **Oracle at \$150.28 is 54.4% below its 52-week high.** That is a capital-structure repricing inside an intact demand story, and it is the largest single drawdown among US mega-caps this brief tracks.
- **Nvidia was the only Mag7 name lower on a day SOX gained 1.81% — down 0.03% at \$218.29 after opening at \$221.24.** On a \$5.26trn capitalisation, a flat day amid a semiconductor rally is a divergence, not a rounding error.
- **Hedgeye added META, MRVL and AAPL to its Signal Strength Stocks list on Friday,** removing twelve names including FCX, TGT and CAH. Marvell's addition alongside Meta and Apple is the AI-adjacent skew in that change.
- **OpenAI's Agents API entered public beta,** exposing the managed harness that runs its Codex-style agents around four concepts — agent, environment, session, events.
- **A Russian-speaking threat actor reportedly used hundreds of AI agents built on OpenAI's Codex and a DeepSeek model to compromise at least 440 PaperCut instances across 395 organisations in 48 countries,** with the campaign starting 31 August and reaching first remote code execution in under four hours and first domain admin two hours after that. Reported figures, not independently verified here. Agentic tooling is now a demonstrated offensive-scale multiplier, which is a procurement and insurance question before it is a technology one.
- **The OpenAI-Nvidia letter of intent** covers at least 10GW of AI data centres with up to \$100bn of progressive Nvidia investment as systems deploy, first gigawatt expected in the second half of 2026 on the Vera Rubin platform. Separate reporting has referenced talks over a backstop of up to \$250bn. These are the commitments the Oracle tape is implicitly questioning the financing of.

14 Beyond the markets

- **Diesel at \$6.05 a gallon is a tax on every physical good in the country, collected with a lag.** It shows up in groceries and freight rates months after it shows up at the pump, which means the August CPI energy contribution is the beginning of the pass-through, not the end of it. The prior record stood for four years and was broken by 23 cents in a single move.
- **Ten ships a day through Hormuz is the number that will still matter in six months.** Prices recover quickly; rerouted supply chains, re-rated charter rates and war-risk insurance premiums do not. The physical reorganisation outlasts the headline.

- **The 30-year mortgage above 7% at a 14-month peak is doing quiet damage.** Lennar reports Wednesday with consensus looking for earnings down 35% year-on-year on revenue down 4.5%. Housing is the transmission channel where a hike into an oil shock lands hardest and shows up slowest.
- **A \$1trn plan to send \$5,000 cheques ahead of the midterms sits alongside a 30-year yield at 2007 highs.** Whatever the political merits, the bond market has already published its assessment of the fiscal path, and it is the assessment the mortgage rate is derived from.
- **KOSPI below 7,000 for the first time in months** is the sort of round-number break that changes domestic retail behaviour in Korea well before it changes anything in the fundamentals.
- **Bitcoin is 39.1% below its 52-week high while equity indices are 2-3% below theirs.** The asset that was supposed to be the inflation hedge has had a worse year than the inflation it was meant to hedge. In the one genuine inflation acceleration of the cycle, it has not worked.

15 Appendix — stock cards

ORCL · ORACLE

\$150.28 ▼ -1.74%

Cap \$432.9bn · 52wk \$114.50-329.50 · post-mkt \$147.81 (-1.64%) · next: FQ2 December

Erased a 7.5% opening gain, ranged \$149.84-166.00 on ~2.5x average volume, and closed below Thursday. Down 54.4% from its high. The reversal was about capex funding, not demand.

CSCO · CISCO SYSTEMS

\$112.13 ▲ +4.37%

Cap \$442.1bn · 52wk \$66.35-130.37 · FQ4 rev \$17.252bn +18% y/y · next: FQ1 November

Beat revenue by ~2.4% on AI networking demand; targets moved toward \$130. Best large-cap move of the session and the cleanest read on enterprise AI capex actually converting to orders.

NVDA · NVIDIA

\$218.29 ▼ -0.03%

Cap \$5.261trn · 52wk \$164.27-236.54 · -7.7% from high · next: FQ3 November

The only Mag7 decliner on a day SOX rose 1.81%. Opened \$221.24, faded to \$218.15, closed on the low. When the largest company on earth cannot participate in its own sector's best day, note it.

AAPL · APPLE

\$332.27 ▲ +1.75%

Cap \$4.849trn · 52wk \$235.03-344.57 · -3.6% from high · added to Hedgeye Signal Strength 11 Sep

Best Mag7 performer, closing near a \$336.22 high. The one mega-cap where the signal work and the tape agreed on Friday.

AMD · ADVANCED MICRO

\$516.13 ▲ +2.49%

Cap \$842.6bn · 52wk \$149.85-584.73 · range \$501.35-521.06 · next: Q3 late October

Led the semis with a 3.9% intraday range on heavy turnover. Up 3.4x from the 52-week low — the most violent re-rating in US large-cap technology this year.

SNDK · SANDISK

\$1,633.35 ▼ -3.50%

Cap \$239.2bn · 52wk \$85.12-2,354.39 · range \$1,616.80-1,720.70

Fell 3.5% while SOX gained 1.81%, alongside Western Digital -2.98%. Storage is being sold into a logic rally. A 52-week range from \$85 to \$2,354 is the definition of a crowded trade unwinding in both directions.

UNH · UNITEDHEALTH

\$379.09 ▼ -2.37%

Cap \$340.3bn · 52wk \$255.97-461.62 · range \$375.90-391.73 · next: Q3 mid-October

Worst large-cap decliner and the reason XLV was the weakest sector. Closed 3.2% off the session high on a day the S&P rose 0.86%. Hedgeye is bullish the sector; the tape keeps disagreeing.

AMAT · APPLIED MATERIALS

\$456.49 ▲ +0.55%

Cap \$362.3bn · 52wk \$168.53-739.67 · -38.3% from high · next: FQ4 November

Underperformed SOX by 1.3 points and remains the deepest drawdown among the large semiconductor-equipment names. Last month's edition of this brief corrected a widely mislabelled close on this name; the figure above is from the primary capture.

16 About this edition

- **Covers** — the US cash session of Friday 11 September as settled, the after-hours tape, the Globex and FX reopen to 06:12 GMT+8 this morning, the full Hedgeye publication set since Friday, and two days of weekend news flow. Asian cash markets have not opened; Tokyo and Seoul are 08:00-08:30, Hong Kong 09:30, India 12:15.
- **Captured** — one window, **06:12:34-06:12:37 GMT+8**, 2.7 seconds, via the skill's concurrent capture script. TradingView returned 96 of 96 instruments in 0.5s. Yahoo Finance returned 0 of 62 and tripped its circuit breaker on five consecutive HTTP 429s in 2.7 seconds, so this run is **TradingView-single-sourced on price**. Independent validation of the three headline index closes was recovered by hand from the Associated Press wire tally. Divergences and single-sourcing are documented in full in section 18.
- **Timing note** — the run fired on schedule at 06:12 GMT+8, twelve minutes after the 06:00 Globex reopen and roughly 72 minutes after the 05:00 FX and spot-metals reopen. Every live row therefore contains minutes, not hours, of trade. Futures changes are repricing gaps; FX major changes are inside the noise band and are labelled amber rather than presented as moves.
- **Settled versus live** — settled Friday 11 September: all US cash equities and sector ETFs, all Treasury yields, VIX, the Mag7 and single-stock table, USD/KRW and USD/TWD, every Asian and European index, and CBOT wheat (grains do not reopen until 08:00

GMT+8). Live at 06:12: ES, NQ, YM, RTY, WTI, Brent, nat gas, RBOB, gold, silver and copper spot, DXY and the FX majors, Bitcoin and Ether. Stalest rows are the Asian previous closes at roughly **26–40 hours**; US cash closes are **49 hours** old.

- **Hedgeye edition** — full logged-in feed reached; edition token FULL HEDGEYE EDITION. The live risk-range set is the **Friday 11 September Early Look, "Front-Running the Fed's Inflation Problem"** by **Ryan Ricci**, published 20:04 GMT+8 Friday. Hedgeye publishes no weekend Early Look, so this is a genuine carry-forward, ~58 hours old, struck before the weekend escalation; tonight's Early Look (~20:00 GMT+8) supersedes it. Also read: KM's Top 3 Things, the Friday Macro Show summary notes, ETF Pro Plus published Sunday 06:09 GMT+8, Signal Strength Stocks, the Macro Week Summary Notes landing page, and the 10 September McCullough bond-market insight. MOMO Tracker and Crypto Quant were reached but are published as images.
- **Quad path** — **no explicit Quad path notation was seen anywhere this morning**. The Macro Week Summary Notes page lists a US Monthly Quad Forecast in its contents but returns only that table of contents behind a separate link. No path is asserted and no claim of continuity is made.
- **Not available** — the previous session's Early Look, so risk-range band *moves* are unknown rather than unchanged; the MOMO Tracker and Crypto Quant data tables; the Quad path; August PPI actual-versus-consensus figures; and a second machine price source.

17 Sources

Prices. TradingView bulk scanner, single window 06:12:34–06:12:37 GMT+8, 96 instruments — primary and, this morning, sole machine source. Yahoo Finance was attempted concurrently and aborted on rate limiting at 06:12:37. Hand cross-check of the three headline index closes against the Associated Press "How major US stock indexes fared Friday 9/11/2026" wire tally, as carried by the Washington Post and ABC News.

Hedgeye. Logged-in app.hedgeye.com feed read 06:15–06:35 GMT+8: Early Look of 11 September 20:04, KM's Top 3 Things 11 September 20:30, Macro Show summary notes 11 September 22:10, ETF Pro Plus 14 September 06:09, Signal Strength Stocks 11 September 03:03 (12 September ET), Crypto Quant and MOMO Tracker 11 September 20:20 and 20:30, and the McCullough market insight of 11 September 01:22.

Macro and policy. BLS Consumer Price Index Summary for August 2026 for the CPI detail, with CNBC, TD Economics and Bloomberg for consensus and reaction; CME FedWatch readings as reported by CBS News, Yahoo Finance and Motley Fool for hike probabilities; EIA gasoline and diesel updates with NPR, Axios, Forbes and Transport Topics for the diesel record; Kiplinger, LiteFinance and TradingKey for the week-ahead calendar.

Session narrative and single stocks. Associated Press wire, CNBC, Washington Post, ABC News and Investrade for the Friday recap; ts2.tech, Seeking Alpha, Investing.com and Forbes for Oracle; ad-hoc-news, GuruFocus and TradingKey for Cisco; CNBC and TechTimes for the Asian close.

Commodities, geopolitics and AI. Al Jazeera, CNN, CBS News, ABC News and La Voce di New York for the Hormuz campaign and the Ghalibaf remarks; OilPrice.com and Bloomberg for the crude reaction; Yahoo Finance, RioTimes and TradingKey for crypto; Nvidia newsroom, CNBC, Barchart, AI Weekly and AI Agent Store for the AI items.

18 Data-confidence

Cross-checks passed

- **Cash index arithmetic is self-consistent on all three headline indices.** S&P: $7,656.98 - 65.28 = 7,591.70$ prior close; $65.28 \div 7,591.70 = 0.8599\%$, matching the reported 0.8599%. Nasdaq Composite: $26,333.0353 - 251.3108 = 26,081.7245$; $251.3108 \div 26,081.7245 = 0.9636\%$, matching. Dow: $52,573.29 - 509.19 = 52,064.10$; $509.19 \div 52,064.10 = 0.9780\%$, matching. VIX: $15.85 + 2.00 = 17.85$ prior; $-2.00 \div 17.85 = -11.204\%$, matching.
- **An independent wire tally confirms all three headline closes to the cent.** The Associated Press "How major US stock indexes fared Friday 9/11/2026" gives S&P +65.28 to 7,656.98, Nasdaq +251.31 to 26,333.04, Dow +509.19 to 52,573.29 — an exact match to the capture on every figure. This recovers genuine two-source validation on the most important rows of the brief after the machine cross-check failed, and it is the reason the snapshot table is not flagged wholesale as unverified.
- **Futures-to-cash basis reconciles on all three contracts where a cash index was captured**, which confirms the settle labels are settles and not mislabelled live prints. ES prior settle 7,659.50 against SPX 7,656.98 is a basis of +2.52 points; YM 52,585 against DJI 52,573.29 is +11.71; RTY 2,904.50 against RUT 2,903.94 is +0.56. All three are normal for a contract days from expiry. **NQ could not be checked** — the Nasdaq-100 cash index was not in the capture universe, only the Composite, so NQ's 29,387.00 prior settle is asserted from the change field alone.
- **The spot-versus-futures distinction changed three risk-range readings materially, and the size of the error is worth printing.** Gold futures at \$4,371.70 carry a 0.93% basis over spot at \$4,331.40; measured on futures, gold would read **42.4%** of its band instead of the true **24.7%** — a 17.7-point error. Silver futures \$64.495 against spot \$63.834 is a 1.04% basis and would read 69.9% instead of 56.7%. Copper futures \$6.5305 against spot \$6.39494 is a 2.12% basis and would read **36.8% instead of 9.2%** — a 27.6-point error, and the difference between "mid-band" and "pinned on the floor". Every metal band in section 4 is measured on the spot series Hedgeye's published line names.
- **The 2-year yield is captured directly at 4.630%, not inferred.** Deriving it backwards from Hedgeye's own 10s2s spread was a documented circularity in an earlier edition; TVC:US02Y removes it. The resulting 10s2s of 33.9bp and 30s10s of 38.7bp are arithmetic from two directly captured series.
- **The capture.py reconciliation report returned 0 matched within 5bp, 0 minor, 0 divergent and 57 single-sourced.** **There are no divergent rows to resolve because no second machine source ran** — Yahoo returned 0 of 62 instruments and tripped its five-consecutive-429 circuit breaker within 2.7 seconds. That is not a clean reconciliation and is not presented as one.
- **Asian previous closes match press reports to within rounding on three of four checkable indices.** ASX 200 8,741.2 matches exactly; KOSPI capture 6,909.92 against a reported 6,909.91; Nikkei capture 64,011.12 against a reported 64,011.34, a 0.22-point difference on a 64,000 index. The capture figure is used throughout in each case.

Known conflicts and weak marks

- **The Fed hike probability is a range, not a number.** Figures in circulation on Friday and over the weekend ran from 79.5% on prediction markets to "nearly 90%" on CME FedWatch, with 85% quoted elsewhere — a 10.5-point spread across sources. The brief says "roughly 85–90%" because the exchange-derived FedWatch reading is the most directly market-implied, but the direction of the repricing (from about 70% pre-CPI and 49.4% a week earlier) is far more robust than any single decimal.

- **Two Hedgeye risk-range positions are measured on prices from a different timestamp.** IGV at 101.52 and OIH at 420.67 are taken from the ETF Pro Plus report published 14 September 06:09 GMT+8, whose own footnote states prices are intraday through 13 September. Neither instrument was in the 06:12 capture universe. Their band positions of 21.0% and 22.7% are therefore approximate and could be off by whatever those ETFs moved in Friday's final hours.
- **Hedgeye's characterisation of consensus is Hedgeye's, not a survey.** The Early Look describes the street at "low 3.4% (meaning somewhere between 3.36% – 3.43%)" for August CPI. The Dow Jones consensus as reported was 3.4% and the print was 3.4%. Hedgeye's own nowcast of ~3.5% was the outlier and was roughly 10bp high. That is printed in section 10 because it is inconvenient, not despite it.
- **The Oracle intraday high differs by one cent between sources** — \$166.00 in the capture, \$165.99 as reported. Immaterial, but it is the kind of divergence that becomes material when a drawdown percentage is computed off a single high. The 54.4%-below-high figure for Oracle rests on a single 52-week-high field of \$329.50 from one source: the conclusion that the drawdown is severe is robust, the decimal is not.
- **Market capitalisations are single-sourced from one TradingView field** at the Friday close. The Mag7 aggregate of \$23.777trn is arithmetic on those seven figures and inherits their uncertainty. No FX translation is involved, which removes one common error source.
- **The Hang Seng day-change disagrees at the margin.** The capture gives -0.596%; a press report gives -0.65%. The capture is used. Separately, that same report cited the CSI 300 at -0.84%, which is a different index from the Shanghai Composite figure of -1.18% carried here — the two are not interchangeable and have not been conflated.
- **Weekend military claims are claims.** The strikes on three Iranian tankers and the IRGC's counter-claim of strikes on three tankers and three US-linked vessels are each reported from the respective sides. Neither has independent confirmation in anything read this morning, and section 11 attributes both rather than stating either flat.
- **SOX has no second source this morning.** The 11,823.9981 close and the -19.3% drawdown from a 52-week high of 14,655.2865 rest entirely on the single machine capture. An earlier edition of this brief found a press-reported SOX level 125 points wrong, so the absence of a cross-check on this line is noted rather than glossed.

Known gaps

- **The previous session's Early Look could not be reached, so the risk-range band moves are UNKNOWN — not unchanged.** The Early Look category page does not paginate: ?page=2 and ?page=3 return the identical 11 September note. The Insights view, the unfiltered feed and the public site were all tried and none surfaced the Thursday 10 September note. No floor move, ceiling move or band-width change is reported anywhere in this brief, because none was observed.
- **No Quad path notation was seen in any publication read this morning.** The US Monthly Quad Forecast sits inside the Macro Week Summary Notes, whose feed page returns only a table of contents behind a further link. The path is neither stated nor implied, and absence of a printed path is not evidence the path is unchanged.
- **The MOMO Tracker and Crypto Quant are published as images and their data tables could not be extracted.** Only the headline strings and disclaimers are machine-readable. **These are precisely the publications that would carry a weekend position change, so the absence of a reported Hedgeye position change in this brief is NOT evidence that there was none.** No Real-Time Alerts appeared in the feed over the weekend either, which is consistent with a closed market but does not rule out a change.
- **Yahoo Finance contributed nothing this run,** so there is no multi-day daily-bar context for week-on-week comparisons and no independent machine price for 57 instruments. Weekly index performance quoted in section 1's narrative (S&P -0.8%, Dow -1.6%, Nasdaq -0.7% on the week) comes from press reporting, not from captured bars.
- **August PPI figures were not verified.** Multiple reports characterise the 10 September release as hotter than expected and credit it with pushing long yields to multi-decade highs, but no actual-versus-consensus pair was confirmed against the BLS release, so no numbers are printed.
- **Asian cash markets are closed at capture.** Every Asian index in section 12 is a previous close. The Topix figure reported in the press (4,028.3, -0.65%) was not in the capture universe and is omitted from the tables.
- **The week-ahead release times are from secondary calendars** and were not confirmed against BLS, Census or the Federal Reserve. The FOMC date, the 3.50-3.75% current target range, and the Lennar and Trip.com reporting dates were cross-checked; the intraday timings were not. One secondary calendar carried an internally contradictory weekday for housing starts, which is flagged in section 8.

Timing & unverified

- **Capture window: 06:12:34-06:12:37 GMT+8, a 2.7-second spread.** No top-up pass was needed and no row in this document was captured outside that window, except IGV and OIH, which are flagged above and carry a 13 September date.
- **Live rows contain minutes of trade, not hours.** Futures held **12 minutes** of Globex since the 06:00 reopen — 4,432 ES contracts, 2,333 NQ, 590 YM, 363 RTY, 2,780 WTI, 227 Brent. FX majors and spot metals held about **72 minutes** since the 05:00 reopen. Crypto is the only genuinely continuous row. Treat futures changes as repricing gaps and FX major changes as noise: DXY's three-tick range and EUR/USD's 6.9-pip range are not moves and are marked amber accordingly.
- **Stalest rows, in hours.** Asian previous closes 26-40 hours depending on the market; US cash equity, Treasury, VIX and single-stock closes **49 hours**; USD/KRW and USD/TWD 49 hours; European closes about 40 hours; the Hedgeye risk-range set **58 hours**.
- **What supersedes what, and when.** Tonight's Hedgeye Early Look and Macro Show, around 20:00-20:30 GMT+8, replace every risk range in section 4 — those bands were struck on Friday morning ET, before the weekend escalation, and crude has since moved from 79.7% to 98.2% of its band. The Wednesday FOMC decision at 02:00 GMT+8 Thursday supersedes every rate expectation in the document.
- **What has moved since capture.** Everything live. By the time this is read, Globex will have run for hours rather than minutes, Tokyo and Seoul will have opened at 08:00-08:30 and Hong Kong at 09:30, and the thin overnight prints in sections 1, 8 and 12 will have been overwritten by real volume.
- **Verify live prices before acting on anything in this document.** No figure here is a quote, none is executable, and the most important ones — the futures gaps and the crude level — were measured on a handful of contracts in the first twelve minutes of a new trading week.
