

DAILY NEED TO KNOW

Thursday, 6 August 2026 · Pre-market brief for Anne Wong

Covering the **Wednesday 5 August 2026 US session as settled** and the Globex overnight into Thursday. All times GMT+8 (HKT). Tokyo, Seoul, Hong Kong, Shanghai, Taipei, Sydney and Singapore are open and are included live; India has not opened. Live prices in this brief were captured **09:53–10:10 GMT+8 Thursday**.

Edition: FULL — Hedgeye logged-in edition. Wednesday's Early Look "Broadening Into Quad 3-1-2" is the live risk-range set until the Thursday Early Look publishes ~19:25–19:55 GMT+8. The monthly Quad path has changed again and is now **3-1-2**. No ETF Pro Plus book-change publication was visible on this subscription's feed this morning — see section 4 and Data-confidence.

1

Market snapshot — Wednesday's close, and where it is trading now

ASSET	LAST	CHANGE	NOTE
S&P 500	7,723.55	▼ -12.97 / -0.17%	Wednesday cash close. Printed a record intraday high of 7,793.68 at 09:36 EDT and gave it all back. Ranged 7,720.17–7,793.68 — closed 3.6pts off the session low
Nasdaq Composite	26,363.44	▼ -221.55 / -0.83%	Ranged 26,348.51–26,739.00. Worst of the majors, and it closed on the low. Now -3.0% from the 27,190.21 June record
Dow Jones	54,349.12	▲ +263.24 / +0.49%	THIRD STRAIGHT RECORD CLOSE and a record intraday 54,744.33. Lilly +4.86% and Disney +3.65% did the work
Russell 2000	3,019.19	▼ -17.79 / -0.59%	Made a new record intraday high of 3,048.85 — taking out the 3,046.59 it missed on Tuesday — then reversed and closed on the low
Philadelphia SOX	12,008.88	▼ -170.38 / -1.40%	Ranged 11,979.94–12,361.25. Tuesday's semiconductor squeeze reversed almost exactly
S&P futures (ES)	7,757.25	▲ +7.75 / +0.10%	LIVE 10:03. Settled 7,749.50, -0.21%. 31,783 lots — heavier than the previous night
Nasdaq-100 fut (NQ)	29,499.75	▼ -115.25 / -0.39%	LIVE 10:03. Settled 29,615.00, -0.83%. Lower for a second consecutive overnight, and the only major equity future down
Dow futures (YM)	54,584	▲ +90 / +0.17%	LIVE 09:57. Settled 54,494, +0.42%. 2,333 lots. Grinding to yet another new high
Russell futures (RTY)	3,025.50	◆ +0.10 / 0.00%	LIVE 09:57. Settled 3,025.40, -0.63%. Unchanged to four decimal places overnight
US 10Y yield	4.617%	▼ -1.0 bp	Wednesday cash close, 4.6188% on the wire. A third consecutive fall, but only just — essentially unchanged on a soft ADP
US 30Y yield	5.17%	▼ -2 bp	A second session under 5.20%. 11bp off Friday's 5.28% 19-year high
US 5Y yield	4.324%	▼ -0.9 bp	The belly stopped leading. Three sessions of rally, and the third was a tenth of the first two
US 13-week bill	3.725%	▼ -0.5 bp	Reversed Tuesday's +3.0bp. The front end finally acknowledged a 44k ADP print
WTI crude (Sep)	\$75.64	▲ +0.42 / +0.56%	LIVE. Settled \$75.22, -0.73%. Spiked intraday on the Houthi tanker strike, then gave it back on Hormuz headlines. Inside Hedgeye's new \$73.09–\$84.68 band
Brent crude (front)	\$79.91	▲ +0.46 / +0.58%	LIVE. Settled \$79.45, +0.11%. The first up settle in four sessions, and it was a rounding error
Nat gas (Sep)	\$2.6710	▼ -0.0170 / -0.63%	LIVE. Settled \$2.688, +0.22%. Sitting 9c off the floor of a bearish band
RBOB gasoline (Sep)	\$2.8322	▼ -0.0066 / -0.23%	LIVE. Settled \$2.8388, -0.47%. UGA -0.56% — a fourth straight decline since Hedgeye sold it
Gold (Dec)	\$4,346.50	▲ +41.30 / +0.96%	LIVE. Settled \$4,305.20, +3.68% — the best session of the year. Spot +4.11%, back above \$4,200. GLD +4.14%
Silver (Sep)	\$62.46	▲ +0.17 / +0.28%	LIVE. Settled \$62.29, +3.39%. Spot +4.12%; SLV +4.14%. Fourth straight session of gains and through its ceiling
Copper (Sep)	\$6.73	◆ -0.00 / -0.01%	LIVE. Settled ~\$6.73, about +1.3%. Also above its band ceiling. Still the only bullish-TREND metal
US Dollar (DXY)	99.67	◆ -0.01%	LIVE. Wednesday close 99.67, -0.19%. Ranged 99.64–99.69 overnight. Hedgeye downgraded the dollar to BEARISH
USD/JPY	157.604	▼ -0.05%	LIVE. A fifth session pinned in a one-yen range. The joint intervention level is simply holding

ASSET	LAST	CHANGE	NOTE
USD/KRW	1,416.28	▼ -0.39% (won stronger)	LIVE. The won is firming into a 4.7% Kospi collapse — which is not the usual pairing
VIX	15.81	▼ -0.69 / -4.18%	Wednesday close. Fell on a down day for the S&P, having risen on Tuesday's record. Low 15.48; vendors disagree on the high (17.50 vs 18.43)
Bitcoin (live)	\$64,499	▲ +0.29%	10:10 GMT+8. ETH \$1,905.24 (+1.73%), SOL \$73.64 (-0.70%), XRP \$1.0500 (-2.13%), BNB \$593.14 (-1.65%)

Colour key: ▲ up ▼ down ◆ neutral/mixed. Green and red denote whether the move is risk-positive, not its direction — a falling yield and a falling VIX are both green; a rising VIX is red. Rows marked LIVE were captured from Globex, spot FX and crypto at 09:53–10:10 GMT+8 Thursday 6 August; everything else is a Wednesday 5 August settle or cash close. Every live futures row reconciles exactly off Wednesday's settle — ES 7,749.50+7.75=7,757.25, NQ 29,615.00–115.25=29,499.75, YM 54,494+90=54,584, RTY 3,025.40+0.10=3,025.50, WTI 75.22+0.42=75.64, Brent 79.45+0.46=79.91, gold 4,305.20+41.30=4,346.50, silver 62.29+0.17=62.46, nat gas 2.688–0.017=2.671, RBOB 2.8388–0.0066=2.8322. Wednesday's settles reconcile back to Tuesday's as published in yesterday's edition: ES 7,765.50→7,749.50 (-0.21%), NQ 29,863.50→29,615.00 (-0.83%), YM 54,268→54,494 (+0.42%), RTY 3,044.70→3,025.40 (-0.63%), WTI 75.77→75.22 (-0.73%), gold 4,152.60→4,305.20 (+3.68%), silver 60.245→62.29 (+3.39%). Cash index arithmetic ties in all four cases: 7,736.52–12.97=7,723.55; 26,584.99–221.55=26,363.44; 54,085.88+263.24=54,349.12; 3,036.98–17.79=3,019.19. Cash Treasury yield indices do not update outside US hours.

TL;DR

The rally stopped, and it stopped at the two places it was most extended. The S&P printed a **record intraday high of 7,793.68** six minutes after the open and closed at 7,723.55, down 0.17%, three points off the session low. The Russell did the same thing more violently — a **new record high at 3,048.85**, the level it missed by 9.6 points on Tuesday, and then a close on the low at 3,019.19. The Nasdaq fell 0.83% and closed on its low. Only the Dow held, +0.49% to a **third consecutive record**, and it did so on Lilly and Disney rather than on anything technological.

Semiconductors gave back Tuesday almost exactly. SOX –1.40%, SOXX –2.12%, SMH –1.04%. AMD fell 7.04% in the regular session, completing the after-hours move. Marvell –3.46% after +12.80%. SanDisk –5.40% after +10.84%. Qualcomm fell more than 3%. The one exception is the one that matters: **NVDA +3.43% to \$219.22 on 156 million shares**, closing \$3.22 through the top of the \$190–216 Risk Range Keith published that morning.

The data was the event, and it was ugly in the specific way that matters. **ADP private payrolls +44,000 in July against 70,000 expected — the weakest print of the year.** ISM Services 54.1 against 54.5 expected, with the employment sub-index at **47.4, back into contraction from 51.2**, and prices paid up to 70.3 from 67.7. Weak labour, hot prices. Monday's manufacturing ISM had employment expanding for the first time in thirty-three months; the services print, covering four-fifths of the economy, says the opposite. That is a stagflation tape, and it is exactly the Quad 3 Hedgeye has been calling.

The bond market barely moved — 10Y –1.0bp to 4.617% — which is its own statement. **Gold did the moving.** December gold settled \$4,305.20, +3.68%, its best session of the year, spot back above \$4,200 and +4.11%; silver +3.39% on the futures and +4.12% spot; GLD and SLV both +4.14%. Alphabet fell 4.03% after **Jeff Dean and three of Google's most senior AI researchers resigned** to start a nonprofit. SpaceX fell 13.61% on 202 million shares into a lock-up that expires today.

Hedgeye published a new monthly Quad path — **3-1-2**, adding an October Quad 2 — downgraded the dollar to bearish, upgraded gold from bearish to neutral, and cut the WTI floor from \$77.28 to \$73.09. Keith's framing of Tuesday was unambiguous and titled: a one-day squeeze is not a trend. The Retail Investor basket that led Tuesday at +5.5% is still down 2.9% over the last month.

The one thing to hold on to: on Tuesday six instruments closed above their Risk Range ceilings and this brief called that a place to reduce. On Wednesday five of the six mean-reverted back inside — helped by ceilings that were raised. **The three that are now outside are gold, silver and copper**, and the VIX is 0.78 off the floor of a bearish band, three days into a payrolls week, on the morning of a 911.5 million share unlock. The metals are telling you what the ISM print said.

2

The big picture — what it means

- Two indices made records and closed on their lows. That is a distribution pattern, not a continuation pattern.** The S&P's 7,793.68 came at 09:36 EDT, six minutes after the open, and the index spent the remaining six and a half hours giving back 70 points. The Russell's 3,048.85 finally took out the 3,046.59 record it missed by 9.6 points on Tuesday, and then closed 29.7 points below it, on the low. The Nasdaq closed 15 points off its low. Only the Dow held its gain, and the Dow held it on healthcare and media. When new highs are printed in the first ten minutes and surrendered over the rest of the session, the marginal buyer arrived at the open and left.
- The semiconductor squeeze reversed in one session, which is what Keith said it would do before it did.** Wednesday's Chart of the Day was titled "A One-Day Squeeze Is Not A Trend" and it published at 07:53 EDT, before the open. By the close SOXX was –2.12%, SOX –1.40%, AMD –7.04%, Marvell –3.46%, SanDisk –5.40%, Western Digital –5.36%, Qualcomm down more than 3%. Every one of those names was up between 7% and 13% on Tuesday. The high-beta reversal ran overnight into Asia and is running there now — Kioxia –10.28%, Ibiden –7.94%, Samsung –5.90%, SoftBank –6.28%. NVDA is the single exception and it is the exception on volume, not on narrative: 156 million shares, +3.43%, and a close above its own published ceiling.
- ADP at 44,000 and ISM Services employment at 47.4 is the labour market cracking in the survey data, three days before it is measured properly.** ADP was the weakest of the year and the goods-producing side carried the damage; job-changer wages still ran +7% year-over-year, which says the shortage is structural rather than cyclical. The ISM services employment sub-index fell to 47.4 from 51.2 — contraction — while prices paid rose to 70.3 from 67.7. Set that beside Monday's manufacturing print, where employment expanded for the first time in thirty-three months and the headline was 55.6. Manufacturing is 11% of the economy; services is roughly four-fifths of it. Two of the three labour reads this week are now soft, and Friday arbitrates.

4. **Gold's 3.68% session is the cleanest signal on the tape and it did not come from the geopolitics.** Crude closed lower. The dollar closed lower by only 0.19%. Yields closed essentially unchanged. There was no risk-off in credit — HYG -0.04%, LQD -0.02%. And gold had its best day of 2026 while silver had its fourth straight up session. That combination — metals up hard, real yields static, dollar soft, breakevens implied higher by an ISM prices-paid print at 70.3 — is a real-rate trade, not a fear trade. Hedgeye upgraded gold from bearish to **neutral** with a 4018–4175 band and the metal closed above it. Keith has been saying for a week that he would buy the dip in gold after payrolls. The market did not wait.
5. **Alphabet lost \$186bn of market capitalisation because four people quit.** Jeff Dean — one of Google's earliest employees and the architect of fifteen years of its AI strategy — is leaving to run Discovery Loop, a nonprofit for AI-driven scientific discovery, and he is taking Oriol Vinyals, Quoc Le and Sanjay Ghemawat with him. Between them they are among the most-cited researchers alive. The stock traded 384.47 to 356.82 and closed -4.03%. It compounds a capex guide of \$195–205bn for 2026 that has already produced the company's first negative quarterly free cash flow, and a flagship Gemini release that has slipped past its expected June date. Note what this is not: it is not a demand problem, a revenue problem or a competitive loss. It is a key-man repricing, and it happened in the one mega-cap the market had decided was winning.
6. **Today's supply event is the largest single-name unlock this market has seen, and the stock is already down 52% from its June high.** SpaceX closed 108.27, -13.61%, on 202 million shares — below its \$135 IPO price, 52% below the \$225.64 record set on 16 June, and 3.2% off an all-time low of 104.83 printed during the session. Roughly 911.5 million shares, about \$116bn, become eligible today against a public float below 280.1 million. Insiders may sell up to the first 20% on day one, then 7% tranches every two to four weeks through October. Musk's 6.4 billion shares stay locked until 12 June 2027. The earnings binary was spent on Tuesday; this is the one that was always going to matter more.

3

Rates, currencies & commodities

- **Rates did almost nothing on a very weak labour print, and that is the story.** Wednesday cash closes: 30Y 5.17% (-2bp), 10Y 4.617% (-1.0bp), 5Y 4.324% (-0.9bp), 13-week bill 3.725% (-0.5bp). Third consecutive down day, but the magnitude collapsed — 5.9bp on Tuesday, 1.0bp on Wednesday, on a day ADP missed by 26,000 and the services employment sub-index went into contraction. The reason is in the same ISM release: prices paid at 70.3, up from 67.7. The curve cannot rally on soft growth when the inflation component is accelerating and three FOMC members are voting to hike. That is the definition of a Quad 3 bond market. Overnight the futures are marginally firmer: ZB +0.14%, ZN +0.03%, ZF flat, ZT -0.02%.
- **Hedgeye's 10-year band moved lower at both ends and the signal is unchanged.** UST10Y 4.58–4.74, still bullish from a yield perspective — the house still expects yields to rise — with the floor cut 2bp from 4.60 and the ceiling cut 1bp from 4.75. The cash 10Y at 4.617% sits 3.7bp off the floor for a second consecutive session. TLT closed +0.22% and remains a stated core short. The tension noted here yesterday persists: yields have now fallen three sessions running against a house view that they rise. What changed on Wednesday is that the fall almost stopped.
- **The dollar was downgraded to bearish, and the reason is on the record in Hedgeye's own research.** DXY closed 99.67, -0.19%, and has traded a five-basis-point range overnight. Keith cut the Risk Range to 99.01–101.17 and moved the signal from **NEUTRAL to BEARISH** — the floor down 40bp and the ceiling down 25bp. In Wednesday's Hanke interview he set out the mechanism plainly: a weaker dollar is what the Treasury wants, because the dollar carries an inverse correlation to the S&P and because devaluation is how you get nominal asset prices up while purchasing power erodes underneath. He sold the last of his dollars on 3 August and is expressing the down-dollar view through emerging markets — Brazil and the Philippines specifically. Crosses were inert: EUR/USD 1.1561 (+0.05%), GBP/USD 1.3472 (+0.03%), AUD/USD 0.7062 (+0.08%), NZD/USD 0.5897 (+0.15%).
- **The yen is five sessions into a pin, and Hedgeye published the definitive account of why.** USD/JPY 157.604, -0.05%, EUR/JPY 182.143. Keith's piece with Professor Steve Hanke on Wednesday afternoon argues the intervention was never about the currency: Japanese M2 is growing 2.2% a year against the roughly 6% consistent with a 2% inflation target, June headline CPI was 1.7% and core 1.6% — a fifth consecutive month below target — and the BoJ has its policy rate at 1.00%, the highest since September 1995, while the yen traded 163.73 six weeks later, the weakest since 1986. The actual constraint is that Japan holds over \$1.1 trillion of Treasuries and funded its ¥11.73trn spring defence by selling \$66.7bn of them in May, into a 30-year that touched 5.244% on 29 July. Tokyo has now said it will use the Fed's FIMA repo facility instead, and Bessent wants it expanded. Read the intervention as a Treasury-market operation with a currency wrapper.
- **Oil round-tripped a Houthi missile strike inside a single session.** WTI Sep settled \$75.22, -0.73%; Brent \$79.45, +0.11%. The intraday spike came on the Houthi claim to have hit a Saudi tanker with missiles off Yanbu — the eighth Saudi tanker targeted since the 22 July blockade — and it was sold within hours on Trump saying a Hormuz deal could come as early as Wednesday. Hedgeye rebuilt the band around the new level: **WTIC \$73.09–\$84.68, bearish**, with the floor cut \$4.19 from \$77.28 and the ceiling cut \$7.68 from \$92.36. The contract is now inside its band for the first time in three sessions, in the lower quintile. The house still holds no position in crude.
- **The EIA print was bearish and nobody traded it either.** Crude inventories built 2.5 million barrels to 407.0 million against expectations of a 1.5 million draw, with Cushing up 2.4 million to 20.96 million. The number that deserves more attention: total US crude stocks including the SPR fell to **711.8 million barrels, the lowest since March 1984**. Commercial inventories are still about 6% below the five-year average. A commercial build into a strategic reserve at a 42-year low is not a comfortable combination if the Hormuz process fails.
- **Metals had the session of the year and gold's signal was upgraded on the way.** Gold Dec settled \$4,305.20, +3.68%; spot +4.11% and back above \$4,200. Silver Sep \$62.29, +3.39%, spot +4.12%. Copper Sep ~\$6.73, roughly +1.3%. GLD and SLV both closed +4.14%. Hedgeye moved gold from **bearish to NEUTRAL** with a band of \$4,018–\$4,175 — and spot closed above the ceiling anyway. Silver's band was lifted to \$57–\$62 from \$56–\$60 and it closed through that too. Copper's 6.36–6.70 band was breached for a second day. All three metals are now outside their ranges to the upside, which under the house's own rulebook is a place to reduce rather than to chase.

4

Hedgeye — regime, risk ranges & the new 3-1-2 Quad path

New since yesterday's brief: Early Look "Broadening Into Quad 3-1-2" (19:53 GMT+8 Wednesday), The Macro Show with Keith McCullough and Matt Cooper (19:37), MOMO Tracker (20:50), Crypto Quant, Chart of the Day "A One-Day Squeeze Is Not A Trend" (19:53) and the Hanke long-form "Financial Media Has Japan Dead Wrong" (02:37 GMT+8 Thursday). Wednesday's Early Look ranges are the live set until roughly 19:25–19:55 GMT+8 tonight.

HEDGEYE MACRO DASHBOARD	READING	WHAT IT SAYS
US MONTHLY	QUAD 3	August Nowcast, unchanged. Growth slowing, inflation re-accelerating. Wednesday's ISM Services — employment 47.4, prices paid 70.3 — is the cleanest single confirmation of this call the data has produced
MONTHLY QUAD PATH	3 → 1 → 2	CHANGED AGAIN, AND IT EXTENDS. Yesterday it was 4→3→1. Today August is Quad 3, September is Quad 1 and October is now nowcasted Quad 2 — growth accelerating with inflation accelerating. Keith: "3-1-2 is the area code in Chicago"
BOOK POSITIONING	LONG-BIASED, BROADENING	No fresh long/short count was published Wednesday. The Mucker Family Office holds RSP plus twelve other US equity ETFs; RSP made an all-time high Tuesday. Last published count was 25 long / 14 short
VIX gauge	15.81	Deep inside the Investable Bucket (9–19) and 0.78 off the floor of its own bearish band . MOMO Tracker headline: "VIX<19, (+) Gamma & Good Times"
Dealer gamma	POSITIVE	Unchanged for a third session. Compresses realised moves — which is consistent with an index that made a record and then bled 70 points in an orderly line
Momentum signals	GOOGL / NVDA = BULLISH	From Wednesday's MOMO Tracker, published 20:50 GMT+8 — before the Jeff Dean resignation hit GOOGL for 4.03%. Mag7 basket +0.7% on the day

The October Quad 2 nowcast is the new information and it is more constructive than it looks. Quad 1 (September) is where Keith has said he will put small-cap exposure back on; Quad 2 is growth and inflation both accelerating, which historically favours energy, tech and industrials. The path 3-1-2 says the growth slowdown is a one-month affair on the house's own nowcast. Note the tension with Wednesday's actual data, which was the weakest labour print of the year.

Risk Ranges — Wednesday's Early Look "Broadening Into Quad 3-1-2", live until tonight's set publishes

INSTRUMENT	IMMEDIATE-TERM RISK RANGE	TREND	WHERE IT STANDS NOW
S&P 500 (SPX)	7,354 – 7,801	Bullish	7,723.55 — back INSIDE the band , 77.5pts below the ceiling. Ceiling raised 157pts from 7,644; floor raised 15pts. ES 7,757.25 overnight is 44pts below it
Nasdaq Composite	25,208 – 26,968	Bullish	26,363.44 — back inside, 605pts below the ceiling. Band widened dramatically: ceiling +828, floor +499
Russell 2000 (RUT)	2,936 – 3,070	Bullish	3,019.19 — back inside, 51pts below the ceiling, having printed a record 3,048.85 intraday. Ceiling raised 65pts
US 10Y yield	4.58 – 4.74%	Bullish	4.617% — 3.7bp off the floor. Both ends of the band lowered
US Dollar (DXY)	99.01 – 101.17	Bearish	99.67 — lower third. DOWNGRADED from neutral to bearish . Keith is out of dollars entirely and long Brazil and the Philippines instead
WTI crude	\$73.09 – \$84.68	Bearish	\$75.22 settle — inside the band for the first time in three sessions , \$2.13 off the floor. Band rebuilt: floor –\$4.19, ceiling –\$7.68. No Hedgeye position in crude
Nat gas	\$2.60 – \$2.90	Bearish	\$2.688 — 9c off the floor. Band unchanged
Gold	\$4,018 – \$4,175	Neutral	Spot back above \$4,200, +4.11%; Dec futures \$4,305.20 — above the ceiling. UPGRADED from bearish to neutral , and the band was lifted at both ends
Silver	\$57 – \$62	Bearish	\$62.29 Sep futures, spot +4.12% — through the ceiling for a second session. Band raised from \$56–\$60
Copper	\$6.36 – \$6.70	Bullish	~\$6.73 Sep futures — above the ceiling for a second session. Floor raised 4c, ceiling raised 7c
VIX	15.03 – 20.65	Bearish	15.81 — 0.78 off the floor , the tightest it has been to the low end all week. Both ends of the band lowered
HY credit (HYG)	78.91 – 79.75	Bullish	79.52 — back inside after closing above on Tuesday. Ceiling raised 34c
IG credit (LQD)	105.4 – 107.2	Bearish	106.74 — back inside the band after Tuesday's breach. Ceiling raised 50c. Hedgeye added this short on Tuesday
Tech (XLK)	\$173 – \$190	Bullish	185.91 (–0.53%) — back inside, \$4.09 below the ceiling. Band raised \$5 at the floor and \$7 at the ceiling
Health Care (XLV)	\$159 – \$167	Bullish	164.16 (+1.27%) — upper half, and the best sector of the session . Band unchanged for a second day

INSTRUMENT	IMMEDIATE-TERM RISK RANGE	TREND	WHERE IT STANDS NOW
Real Estate (XLRE)	\$44.77 – \$46.30	Bullish	45.20 (+0.07%) — lower half. Third consecutive session effectively flat
Nvidia (NVDA)	\$190 – \$216	Bullish TRADE & TREND	\$219.22 — \$3.22 ABOVE the ceiling after a +3.43% session on 156m shares. Alpha Code 205/207. Keith: the low end at \$190 sits below both TRADE and TREND

Sixteen macro ranges plus one single name, from Wednesday's Early Look. Keith published NVDA's levels explicitly and framed them as causal in both directions. Hedgeye publishes no Risk Ranges for Utilities, Financials, Energy, Communication Services, USD/JPY, Brent, Bitcoin or any Asian index. Gold, silver and copper bands are quoted on spot; where this brief compares them to front-month futures settles a contango basis of roughly 0.5–1.0% applies — see Data-confidence.

What Keith actually said

- **“A one-day squeeze is not a trend” — and he published the numbers under it.** Tuesday's move was led by the High Retail Investor basket at +5.5%, the Most Consensus Hedge Fund Short basket at +4.2% and Profitless Tech at +4.0%. The Retail basket is still **–2.9% over the last month** and has had two large drawdowns inside a year. His three most-active tickers in world markets on Tuesday were PLTR (+29%, 175m shares), SPCX (+9%, 144m shares) and NVDA (+3%, 135m shares). By Wednesday's close PLTR was –2.60% and SPCX was –13.61%. NVDA was the only one of the three that held.
- **PLTR is still, on his framework, in crash mode.** “Down –22% from where Retail chased it to \$207 in 2025.” It closed 158.43 on Wednesday, –2.60%, having peaked at 207.52 over the past year. Two sessions of a 30% repricing have not changed that arithmetic.
- **Broadening is the thesis, and RSP is the expression.** “Our Long Equal Weight (RSP) ramped to an all-time high yesterday.” The MFO holds twelve further US equity ETFs alongside it. RSP closed 219.73 on Wednesday, –0.23% against SPY –0.20% — a 3bp lag, after 36bp and 50bp of lag in the two prior sessions. The gap is closing, which is what a broadening thesis needs.
- **On NVDA specifically, and it is worth quoting exactly.** “Since you ‘Buy Tech’ in any Quad other than WHEN entering #Quad4, The Machine buying/chasing NVDA and GOOGL back to Bullish TRADE and TREND makes sense with the pending MONTHLY Quad Count = 3-1-2.” He then flagged the risk without hedging it: NVDA can blow up like TSLA or GOOGL did on a rate-of-change revenue slowdown, and it has not had to report yet. Note the timing — that was written at 07:53 EDT, and GOOGL fell 4.03% that afternoon on the Jeff Dean resignation.
- **The Bessent critique is now explicit and it is the frame for the dollar downgrade.** “If you gave me \$500 million, never mind \$5 to \$10 billion of US taxpayer-based balance sheet, I could manipulate the shit out of anything. So again, it's not smart. It's political.” Hanke's framework calls the Treasury a Big Player — moves markets on words alone, insensitive to profit and loss, answers to no readable rule. Whatever one makes of the politics, the position it produced is coherent: dollar bearish, bond yields bullish, real inflation on a currency-adjusted basis. That is textbook Quad 3.

5

Mag7 scoreboard (Wed 5 Aug close)

NAME	LAST	DAY	CAP	READ
Nvidia (NVDA)	\$219.22	▲ +3.43%	\$5.31T	Best of the Mag7 by a wide margin and the only large-cap semiconductor that worked. 156m shares. Closed \$3.22 through the top of the \$190–216 range Keith published that morning
Apple (AAPL)	\$311.00	▲ +0.52%	\$4.539T	Second consecutive gain. A quiet, defensive session for a name that spent last week being sold on memory costs
Meta (META)	\$588.77	▲ +0.14%	\$1.50T	Effectively flat, having ranged 580.12–601.00. Launched Muse Code, its first AI programming agent, at aggressive pricing. Still ~26% below the \$796.25 high
Microsoft (MSFT)	\$487.46	▼ –1.09%	\$3.62T	Second straight session of underperformance. Disclosed \$24.1bn of FY sales from OpenAI — roughly 70% of its actual AI revenue
Amazon (AMZN)	\$272.65	▼ –1.72%	\$2.941T	Second consecutive fall. Now \$59bn below the \$3 trillion handle it held for exactly one session on Monday
Tesla (TSLA)	\$321.55	▼ –1.77%	\$1.27T	Still above \$300 for a sixth session. Still the year-to-date Mag7 laggard and 36% below its 52-week high
Alphabet (GOOGL)	\$362.43	▼ –4.03%	\$4.432T	WORST OF THE MAG7 AND THE LARGEST SINGLE-DAY CAP DESTRUCTION IN THE INDEX. Jeff Dean, Oriol Vinyals, Quoc Le and Sanjay Ghemawat all resigned. Traded 384.47 down to 356.82

Wednesday official cash closes; market capitalisations are Yahoo Finance primary marks, not derived. The dispersion inverted from Tuesday: on a session when the Nasdaq fell 0.83%, three of the seven rose and Nvidia added 3.43%. Hedgeye's MOMO Tracker put the Mag7 basket at +0.7% on the day — which means the basket outperformed the index it dominates by 153bp, the mirror image of Tuesday, when five of seven underperformed a 2.59% Nasdaq. Note that the MOMO Tracker was published at 20:50 GMT+8, before the Alphabet news.

6

Positioning & options

- **The VIX fell 4.18% on a down day, having risen 4.04% on a record day. Both of those are the wrong sign.** 15.81, low 15.48, and it is now 0.78 off the floor of a bearish 15.03–20.65 band. Read the two days together: on Tuesday the index made a record and insurance got more expensive; on Wednesday the index made a record and reversed, and insurance got cheaper. That is not a market pricing the calendar in front of it — a 911.5 million share unlock today and payrolls tomorrow night. Dealer gamma is still positive, so realised moves stay compressed and the two facts are consistent. But insurance at a 15.81 handle three days into a payrolls week is not expensive.
- **Five of Tuesday's six overbought signals resolved, and they resolved by mean reversion and by band-widening.** SPX, COMPQ, RUT, XLK, HYG and LQD all closed above their ceilings on Tuesday; all six are back inside on Wednesday. Part of that is price — four of the six fell. Part of it is that Hedgeye raised every one of those ceilings in Wednesday's Early Look, in several cases substantially: the S&P ceiling went up 157 points and the Nasdaq ceiling went up 828. A widening band on a trailing volatility-adjusted range is itself information: realised volatility went up, not down, over the two-day squeeze.
- **The new overbought cohort is metals, and there are three of them.** Gold closed above a ceiling that had just been raised and its signal upgraded. Silver closed above a ceiling that had just been raised. Copper closed above its ceiling for a second consecutive session. Under the house rulebook — a close above the top of the immediate-term range is where you reduce, a break of the floor is where you cut — that is a sizing instruction on the one trade that worked on Wednesday. It is also the trade with the cleanest macro logic on the tape, which is precisely when the rule is hardest to follow.
- **The squeeze stopped on day three and the reversal was symmetrical.** Two sessions of short-covering lifted neoclouds on Monday and semiconductor hardware on Tuesday. On Wednesday: AMD –7.04%, Marvell –3.46%, SanDisk –5.40%, Western Digital –5.36%, CoreWeave –2.19%, TSMC –0.76%, Qualcomm down over 3%, SOXX –2.12%. Palantir gave back 2.60% of a 29% day. SpaceX gave back everything and then some. Keith's number for what is actually being squeezed — the Retail Investor basket down 2.9% on the month after a +5.5% day — is the right denominator. Three days of squeeze has not repaired a month of liquidation.
- **Equal weight almost caught up, and that is the first genuinely constructive positioning datapoint in a week.** RSP –0.23% against SPY –0.20% — a 3bp lag, after 36bp on Tuesday, 50bp on Monday and 87bp on Friday. RSP printed an all-time high of 221.09 during Wednesday's session. The broadening Keith has been arguing for is now visible in the number rather than only in the narrative, and it survived a session in which the largest single-name move was a mega-cap falling 4%.
- **Credit did not care about any of it.** HYG –0.04%, LQD –0.02%, both back inside their bands. On a day the S&P reversed a record high, the Nasdaq fell 0.83%, ADP missed by 26,000 and a \$4.4 trillion company fell 4%, high-yield moved three cents. Either credit is asleep or the equity move was genuinely idiosyncratic. Hedgeye's LQD short, added Tuesday on a close above a bearish band, is now back inside the range and marginally offside.
- **Crypto woke up slightly, and Hedgeye's own product flagged the flow.** Bitcoin \$64,499, +0.29% overnight, IBIT +0.96% on Wednesday. The Crypto Quant headline carries **ETF inflows of +\$265m day-over-day** against a bitcoin price down 0.4% on the day — flow without price. Ether +1.73% at \$1,905.24 is the best of the majors. XRP –2.13% is the worst. Strategy (MSTR) +0.74%. Nine sessions of nothing while the S&P made three records, and the ETF bid is still there.

7

Sector rotation — leaders & laggards (Wed 5 Aug)

SECTOR (SPDR PROXY)	CLOSE	DAY	NOTE
Health Care (XLV)	164.16	▲ +1.27%	BEST. Hedgeye long. Eli Lilly +4.86%, McKesson +5.64%. Upper half of a 159–167 band. The defensive that led on a stagflation print
Materials (XLB)	52.64	▲ +1.23%	Gold and silver miners did the work; copper +1.3% helped. Second-best for a third consecutive session
Consumer Discretionary (XLY)	118.64	▲ +0.30%	Amazon –1.72% again failed to sink it. Shopify +16.98% was the offset
Financials (XLF)	58.00	▲ +0.21%	Goldman +0.70%. A quiet, positive session with yields going nowhere
Real Estate (XLRE)	45.20	◆ +0.07%	Hedgeye long. Effectively flat for a third straight session despite 13bp of 10-year rally across three days
Industrials (XLI)	186.35	◆ –0.03%	Caterpillar –0.62% gave back a little of Tuesday's +5.60%. Flat
Consumer Staples (XLP)	85.33	◆ –0.05%	Flat for a second day. Not participating in either direction
Technology (XLK)	185.91	▼ –0.53%	Tuesday's +4.98% best sector was eighth on Wednesday. Semis (SMH) –1.04% vs software (IGV) –0.68% — the split re-inverted back to Monday's shape
Utilities (XLU)	43.66	▼ –1.02%	Worst but one, again. Bearish TREND since last week and it has not recovered on a single session of the three-day yield rally
Communication Services (XLC)	110.87	▼ –1.04%	Alphabet –4.03% is the entire sector move. Meta +0.14% could not offset a \$186bn cap loss
Energy (XLE)	57.31	▼ –2.07%	WORST. Hedgeye long. E&P (XOP) –3.93%, refiners (CRAK) –1.98% — the refinery-over-barrel distinction stopped working on a day the barrel was flat

- ▲ **Leaders, and they were made of gold, drugs and commerce.** Materion +30.81%, Select Water Solutions +20.32%, Shopify +16.98% (Q2 print), Bending Spoons +16.82%, UroGen +16.31%. Then the large caps that actually moved the index: McKesson +5.64%, Eli Lilly +4.86%, Disney +3.65%, Nvidia +3.43%, MercadoLibre +1.80%, eBay +1.40%, Intel +0.20%. GLD +4.14% and SLV +4.14% were the two most powerful liquid instruments on the tape.
- ▼ **Laggards, and they were guidance and resignations.** SolarEdge -30.48%, Teradata -23.73%, Insulet -20.12%, Extreme Networks -19.02%, Chemours -18.63%. Then the names that mattered: SpaceX -13.61%, AMD -7.04%, SanDisk -5.40%, Western Digital -5.36%, Uber -5.29%, CVS -5.08%, Chord Energy -5.07%, Crown Castle -4.92%, Devon -4.45%, Alphabet -4.03%, Marvell -3.46%, Shell -2.32%, CoreWeave -2.19%, Palantir -2.60%.
- ◆ **Rotation read.** Three days, three different leadership groups, and Wednesday's was the one that fits the macro. Monday was neoclouds, Tuesday was semiconductor hardware, Wednesday was **healthcare, materials and precious metals** — the classic Quad 3 sector list, and the one Hedgeye's own August nowcast prescribes. That it arrived on the day ISM Services printed employment at 47.4 and prices paid at 70.3 is not a coincidence. What is genuinely new is that the rotation happened without a risk-off: credit was unchanged, the VIX fell, and the equal-weight index almost matched the cap-weighted one. This was a market changing what it owned, not how much it owned. Energy is the honourable exception in the wrong direction — the sector fell 2.07% on a day the barrel was down 0.73%, and for the first time this week the refiners fell with the E&Ps.

8 Forward — futures & the week ahead

- **Where the tape is as Asia trades through its morning.** At 09:57-10:03 GMT+8: ES 7,757.25 (+0.10%), NQ 29,499.75 (-0.39%), YM 54,584 (+0.17%), RTY 3,025.50 (unchanged) — three flat-to-green, one red, and the red one is the Nasdaq for a second consecutive overnight. Volumes 31,783 / 34,874 / 2,333 / 3,641 lots. Treasury futures a touch firmer: ZB +0.14%, ZN +0.03%, ZF flat, ZT -0.02%. WTI +0.56% at \$75.64; Brent +0.58% at \$79.91. Gold +0.96% at \$4,346.50 and silver +0.28% — the metals are still going up in Asian hours. Dollar 99.67, unchanged. Crypto flat to higher. **The disconnect to note: US futures are flat while Asian cash equities are down between 1% and 5%.**

DAY (GMT+8)	KEY EVENTS
Thu 6 Aug (today)	★ SPACEX LOCK-UP EXPIRY — the largest single-name supply event this market has faced. Roughly 911.5m shares, about \$116bn, become eligible against a public float below 280.1m. Insiders may sell up to the first 20% today; then 7% tranches every two to four weeks through October; ~28% at Q3 earnings; the remainder on 8 December. Musk's 6.4bn shares are locked until 12 June 2027. The stock closed 108.27, below its \$135 IPO price and 3.2% off an all-time low. ★ US weekly jobless claims 20:30 (prior 197k) — the second of the week's three labour reads, and it now matters more than it did before ADP printed 44k. ★ Earnings: Warner Bros Discovery, Keurig Dr Pepper, Kenvue, Fiserv and Viartis confirmed on the exchange calendar; Datadog, Lyft, Roku, Airbnb and DraftKings are carried from secondary calendars and are not confirmed — see Data-confidence.
Fri 7 Aug	★ US July employment report, 20:30. It now arbitrates a genuinely lopsided argument: ISM manufacturing 55.6 with employment expanding for the first time in 33 months, against JOLTS openings -178,000, ADP +44,000 and ISM Services employment at 47.4. Three of four labour signals this week are soft. June ran +57,000 against a 115,000 consensus with unemployment at 4.2% only because participation fell 0.3pp; April-May were revised down a combined 74,000. July consensus is dispersed roughly 88,000-130,000 with unemployment variously 4.2% or 4.3%. Establish your own number. The asymmetry has not changed: because the 29 July dissents were hawkish, a hot print is the risk here, not a cold one. ★ China trade balance 11:00.
Watch	Whether SpaceX finds a bid on the unlock or whether 911.5 million shares against a 280 million float does what arithmetic says it should. Whether gold holds above \$4,200 after a 3.68% session and a signal upgrade, or whether the metals mean-revert into their bands the way the equity indices just did. Whether the Kospi's 4.7% collapse and Kioxia's 10.3% fall stop in Asia or arrive in the US semiconductor complex tonight. Whether Alphabet's key-man repricing extends or is bought. Whether a Hormuz instrument is actually signed — Trump has now said "very soon" and "as early as Wednesday", and Wednesday has passed. And whether the October Quad 2 nowcast survives Friday's payrolls.

Times converted to GMT+8 by adding 12 hours to US Eastern. This brief was written at approximately 10:20 GMT+8 Thursday. The Bank of Japan's July minutes and New Zealand's Q2 unemployment, both flagged in yesterday's edition, published Wednesday morning GMT+8 and their contents were not retrieved — they are not characterised here. No central bank decisions fall between 6 and 7 August. The Bank of Korea meets 27 August and is expected to hike a second time.

9 Corporate news

- **Alphabet lost four of its most important researchers in one announcement.** Jeff Dean — employee number twenty-something, and the person who has run Google's AI strategy for fifteen years — is leaving to become chief executive of Discovery Loop, a newly formed nonprofit focused on AI-driven scientific discovery. Oriol Vinyals, Quoc Le and Sanjay Ghemawat are going with him. Between them the four have driven advances in mathematics and protein structure prediction and rank among the most-cited researchers in the world. GOOGL closed -4.03% at 362.43 having traded 384.47 to 356.82 — roughly \$186bn of market capitalisation. The context that made it worse: a 2026 capex guide raised to \$195-205bn which has already produced the company's first negative quarterly free cash flow, and a flagship Gemini release still unshipped against an expected June date. Hedgeye's own momentum tracker had GOOGL flagged BULLISH that morning.
- **SanDisk grew revenue 372% and fell 5.4%, then fell another 8% after hours.** Fiscal Q4 revenue \$8.965bn — up 372% year-over-year — with record quarterly EPS, beating consensus by more than 10%, and a gross margin of **84.6%**, more than triple the prior-year level. Data-centre revenue rose nearly thirteen-fold year-over-year and doubled sequentially; edge computing, the largest segment, grew nearly four-fold; consumer fell 5%. Full-year revenue +175%. The problem was the guide: fiscal Q1 revenue at the midpoint implies +359% year-over-year and is

still **5.5% below consensus**, with EPS slightly light and gross margin flat sequentially. The stock closed 1,350.50, -5.40%, and traded down to roughly \$1,287.67 after hours.

- **Western Digital beat on everything and fell 5.36%, then 10% more after hours.** Q4 revenue \$3.747bn, +44% year-over-year against \$3.68bn expected; net income up more than twelve-fold; adjusted EPS \$3.56 against \$3.31. Fiscal Q1 guidance of \$4.0–\$4.2bn has a \$4.1bn midpoint against a \$4.06bn consensus — a beat. The stock fell anyway. After several consecutive quarters of beats and a very large move in the shares, the market wanted more than a beat. Same pattern as AMD on Tuesday, same pattern as SanDisk on Wednesday: the numbers are not the problem, the multiple is.
- **Disney was the second-largest contributor to a record Dow close.** DIS +3.65% at 101.76 after reaffirming double-digit earnings growth and targeting **\$9bn of buybacks**. Set against a stock that has spent the year between 92.19 and 119.78, a reaffirmation plus a capital-return number is a low bar cleared cleanly — and on a session when the Nasdaq fell 0.83%, low bars cleared cleanly were the trade.
- **Eli Lilly +4.86% and McKesson +5.64% made healthcare the best sector.** LLY closed 1,169.86, back within 6.4% of its 1,249.45 high, with a \$1.043 trillion capitalisation. The sector Hedgeye is long — and the sector its own August Quad 3 nowcast prescribes — was the best performer on the day the data confirmed the nowcast. CVS -5.08% was the offsetting move inside the group.
- **Shopify +16.98%, Uber -5.29% — the same tape, opposite verdicts on guidance.** SHOP closed 144.24, its largest single-day move of the year, on a Q2 print. Uber fell 5.29% to 68.18 on weak forward guidance despite strong bookings growth, and is now within 4.2% of its 52-week low. eBay +1.40%. The pattern across the whole session, from AMD to Western Digital to Uber: the market is paying for guidance, not for results, and it is paying less than it was a week ago.
- **And the tail was long and violent.** SolarEdge -30.48%, Teradata -23.73%, Insulet -20.12%, Extreme Networks -19.02%, Chemours -18.63% — five S&P and mid-cap names down more than 18% in a session when the index fell 0.17%. On the other side, Materion +30.81% and Select Water Solutions +20.32%. Dispersion of this size under a quiet index is what a late-cycle earnings season looks like, and it is the single best argument for the equal-weight construction Hedgeye is running.

10

Macro data

- **ADP private payrolls rose 44,000 in July against a 70,000 consensus — the weakest print of the year.** The goods-producing side carried most of the damage. The one component that did not soften: pay for job-changers rose about 7% year-over-year, which says the labour shortage is structural rather than a function of demand. Coming twenty-four hours after JOLTS openings fell 178,000, this is the second consecutive soft labour read and the first one that is a July number rather than a June number.
- **ISM Services printed 54.1 against 54.5 expected, and the internals are a textbook stagflation split.** Business activity 59.1 from 55.4 and new orders 57.2 from 55.1 — both strong and both accelerating. Employment **47.4 from 51.2** — into contraction. Prices paid **70.3 from 67.7** — accelerating. Demand is fine, hiring is not, and costs are rising. Compare Monday's manufacturing print, where employment expanded for the first time in thirty-three months at 52.8 and prices paid eased to 71.1 from 73.0. The two surveys now disagree on both of the components that matter, and services is four-fifths of the economy.
- **The bond market believed the prices, not the payrolls.** 10Y -1.0bp, 5Y -0.9bp, 30Y -2bp, 13-week bill -0.5bp. That is a curve that moved less on a 26,000 ADP miss than it moved on Tuesday's JOLTS miss, because Tuesday had a 5.7% crude break underneath it and Wednesday had a services prices-paid index at 70.3. The oil channel and the growth channel pulled together on Tuesday; on Wednesday the inflation channel pulled the other way and the two roughly cancelled.
- **Friday's payrolls now arbitrates a four-way split, and three of the four are soft.** ISM manufacturing 55.6 with employment expanding for the first time since 2023; JOLTS openings -178,000 to 7.359m; ADP +44,000 against 70,000; ISM Services employment 47.4. June ran +57,000 against a 115,000 consensus, with the unemployment rate holding 4.2% only because participation fell 0.3 percentage points to 61.5%, the lowest since March 2021, and with April and May revised down a combined 74,000. July consensus is dispersed roughly 88,000 to 130,000. **The asymmetry is unchanged and it is the thing to hold on to: because the 29 July dissents were hawkish, a hot print is the risk to this market, not a cold one.**
- **EIA: a 2.5 million barrel build against a 1.5 million draw expected.** Commercial crude inventories rose to 407.0 million barrels, about 6% below the five-year average. Cushing built 2.4 million to 20.96 million. The number underneath it deserves more attention than it got: total US crude stocks **including** the Strategic Petroleum Reserve fell to 711.8 million barrels, the lowest since March 1984. Commercial cover is adequate; strategic cover is at a 42-year low, into a war that has closed the Strait of Hormuz since 8 July.
- **The Fed is still at 3.50–3.75% and Wednesday's data cut both ways for it.** The 29 July hold was a 9–3 vote with Hammack, Kashkari and Logan dissenting for a hike, and the statement cited elevated inflation partly attributable to Middle East energy shocks. Crude is down about 10% in four sessions, which weakens that stated justification — but a services prices-paid index at 70.3 rebuilds it from a different direction. The 63% September hike probability carried in this brief is market-implied as of 31 July and is now materially stale.
- **And the tariff round is still underneath all of it.** The 10% to 12.5% Section 301 round on 60 trade partners was cited at the July press conference as one of the shocks the committee weighed. It sits under the Quad 3 inflation call, it is entirely independent of the Strait, and it is the most plausible single explanation for a services prices-paid index at 70.3 while the barrel falls.

11

Geopolitics

- ▲ **The negotiation acquired a structure, and for the first time it is a described mechanism rather than a described intention.** Regional officials told the Associated Press that the Iran–Oman talks have centred on a proposal under which ships **enter the Persian Gulf through an Iranian-**

controlled route and exit through an Omani-controlled one. That is the first time the actual navigation architecture — the specific thing Trump said last week was unresolved — has been publicly described. Trump said a deal could come as early as Wednesday and that the Strait would reopen “very soon”. Rubio said on Tuesday that progress had been made “but not finality yet”.

- ▼ **Tehran cut the link publicly, and the shooting continued.** Iranian state media reported on Wednesday that any agreement between Iran and Oman has “**no connection**” to reopening the Strait — which, if it holds, empties the mechanism above of the thing the market is pricing. The Houthis said they hit a Saudi oil tanker with missiles off Yanbu, the eighth Saudi tanker targeted since the blockade began on 22 July. An Indian-flagged vessel was struck and sunk off Yemen. Trump’s framing at a Las Vegas rally was that the Strait reopens “very soon” or Iran gets “hit very hard”.
- ◆ **What is actually priced, stated plainly.** A described navigation architecture, a Treasury Secretary’s timeline that has now expired, a Secretary of State’s progress report and a presidential threat — against a counterparty whose state media explicitly decoupled the Oman track from the Strait on the same day, and eight tankers hit in two weeks. Crude took the round trip in one session: up on the missile, back down on the headline, closing -0.73%. That is a market that has finished pricing the good news and has not started pricing its absence.
- ◆ **The base rate is poor and it is recent.** The June memorandum was signed, held for weeks and broke: on 7 July Iran fired on three commercial vessels in Omani waters, CENTCOM struck in response, and by 12 July the IRGC had formally closed the Strait. Trump reinstated the blockade on 13 July. The Strait has been impassable since 8 July and this is not the first halt announced since the war began on 28 February. Commonwealth Bank estimated that Hormuz transit had recovered to only 30–35% of pre-war levels against a normal ~88 ships a day, and that 50–60% would be enough to reassert oversupply. Nothing published on Wednesday updates that number.
- ◆ **One new datapoint on the military side, and it is the most important thing published all day.** CNN reported, citing sources, that the US military has used nearly **80% of its interceptors for a key missile-defence system**, with stockpiles of some air-defence systems significantly depleted during the conflict. That is a constraint on the escalation option, and it cuts in two directions at once: it makes an American strike less likely at the margin, and it makes American negotiating leverage weaker than the rhetoric implies. If you are sizing the tail risk on this trade, that number belongs in the calculation.
- ◆ **Position-sizing read, unchanged in direction and larger in magnitude.** Crude at \$75.22 has priced a meaningful part of a reopening that has not happened, so a breakdown is worth more than it was. An actual signature releases a real-economy recovery. But the risk is no longer symmetrical in time: the market has now heard “today or tomorrow” from the Treasury Secretary and “as early as Wednesday” from the President, and Wednesday has passed with the eighth tanker hit and Tehran denying the linkage. Each expired deadline costs something.

12

Asia setup — today (Thu 6 Aug, live at 09:53–10:10)

MARKET	LIVE	CHANGE	NOTE
Kospi (Korea)	6,289.76	▼ -308.50 / -4.68%	THE WORST MARKET IN THE WORLD THIS MORNING. Opened -1.81% at 6,478.75 and has more than doubled the loss since. Ranged 6,238.32–6,550.94. Samsung -5.90%, SK Hynix -5.58% at 1,575,000 won. Hedgeye is short Korea
Nikkei 225 (Japan)	64,977.04	▼ -1,323.40 / -2.00%	Opened lower and widened. Ranged 64,942.07–65,983.13 — trading on the low. Kioxia -10.28%, Ibiden -7.94%, SoftBank -6.28%. Yesterday it was +3%
Hang Seng (HK)	25,416.92	▼ -498.90 / -1.93%	Opened weak and stayed there. Ranged 25,415.05–25,667.14 — also on the low
TWSE (Taiwan)	44,104.18	▼ -507.42 / -1.14%	TSMC ADR closed -0.76% overnight; the local index is doing worse
SSE Composite (China)	3,876.16	◆ -2.27 / -0.06%	The one Asian index that is not participating in the semiconductor unwind. Ranged 3,864.27–3,883.99
ASX 200 (Australia)	9,282.00	▲ +54.20 / +0.59%	A record 9,296.70 intraday. Materials and gold miners — the same trade that won in New York
Straits Times (Singapore)	5,625.51	▲ +44.14 / +0.79%	Ranged 5,585.28–5,633.41. No semiconductor weight, no problem
NZX 50 (New Zealand)	13,990.70	◆ -6.48 / -0.05%	Flat just under its record. Hedgeye is long New Zealand through ENZL
Jakarta Composite	6,351.14	▲ +31.53 / +0.50%	Up for a second session
FTSE Bursa Malaysia	1,743.94	▼ -4.23 / -0.24%	Modestly lower
USD/KRW	1,416.28	▼ -0.39%	The won is stronger on a 4.7% equity collapse , which is backwards. Ranged 1,414.18–1,424.08
USD/TWD	32.193	▼ -0.20%	Same pattern, smaller. The dollar-down trade is overriding the risk-off in Asian FX
USD/CNY	6.7470	▲ +0.10%	Marginally weaker yuan, still close to the strong end of its 52-week range

- **Asia is repricing the AI memory complex and it is doing it harder than New York did.** The US semiconductor tape fell 1.4% on the SOX. Kioxia is down 10.28%, Ibiden 7.94%, SoftBank 6.28%, Samsung 5.90% and SK Hynix 5.58%. The transmission mechanism is explicit — SanDisk’s guide came in 5.5% below consensus after hours and Western Digital’s stock fell 10% on a beat, and both are read in Seoul and Tokyo as read-

throughs on NAND and DRAM pricing rather than as company events. The Kospi has now gone +17.91%, -5.12%, +1.62%, +4.4% and -4.68% across five sessions. Hedgeye is short the country, said on Tuesday it intended to short more, and stated an intention to move DRAM from long to short. On this morning's tape both of those are working.

- **Note carefully what is not happening: this is not a risk-off.** The won is stronger. The Taiwan dollar is stronger. Australian equities are at a record. Singapore is up 0.79%. Shanghai is flat. US futures are green on the S&P and the Dow. Gold is up another 0.96% in Asian hours. This is a single-sector unwind inside a market that is otherwise rotating, and the sector is the one that was up 5.55% on Tuesday.
- **Australia is the cleanest expression of the New York rotation.** The ASX 200 printed a record 9,296.70 with materials and gold miners leading, on the morning after gold's best session of the year. If you want a single confirmation that Wednesday's US session was a Quad 3 rotation rather than a growth scare, it is an all-time high in a resource index on a day the regional semiconductor complex is down 5-10%.
- **India has not opened and Hong Kong is on its low.** The Sensex opens at 12:15 GMT+8 and closed Wednesday at 78,581.00, +0.19%, still 8.8% below its 86,159.02 high. The Hang Seng is trading at 25,415.05-25,667.14 and sitting on the bottom of that range with two hours of the morning session left.

13 AI watch

- **The key-man risk in AI stopped being theoretical.** Four of the most-cited researchers in the field walked out of Google on the same day and Alphabet lost \$186bn. Jeff Dean has been the intellectual centre of Google's AI programme for fifteen years; Vinyals ran the AlphaStar and Gemini lineages; Le co-authored the work that produced modern sequence learning; Ghemawat wrote the infrastructure the whole company runs on. They are leaving for a **nonprofit** — Discovery Loop, aimed at AI-driven scientific discovery — which removes the simplest explanation, that a competitor paid up. The market has spent two years modelling AI as a capex race and a chip-supply problem. Wednesday priced it as a talent-concentration problem, and there is no obvious way to hedge that.
- **The memory cycle is now being repriced on guidance rather than on results, in three consecutive sessions.** AMD beat and raised on Tuesday and closed -7.04% on Wednesday. SanDisk grew revenue 372% at an 84.6% gross margin and fell 5.4%, then another 8% after hours on a guide 5.5% light. Western Digital beat revenue, EPS and guidance and fell 5.36%, then 10% more. Three of the best-looking quarters in the semiconductor complex, three negative reactions. That is not a demand signal. It is the market marking down what it will pay for a given rate of growth, which is a multiple event, and multiple events do not stop because the next print is good.
- **Nvidia is the entire counter-argument and it is holding.** +3.43% to \$219.22 on 156 million shares, on a day AMD fell 7% and the SOX fell 1.4%, and it closed \$3.22 through the top of its own published Risk Range. Keith's framing that morning was that The Machine buying NVDA and GOOGL back to bullish TRADE and TREND makes sense with a 3-1-2 Quad path — half of that trade worked spectacularly and the other half lost 4% by the close. His warning is worth restating exactly: NVDA can blow up the way TSLA and GOOGL did on a rate-of-change revenue slowdown, and it has not had to report yet.
- **Anthropic is building its own silicon, and said so carefully.** The company confirmed an internal silicon team designing custom chips for Claude, using a hardware-model co-design approach for speed and efficiency at deployment scale — while explicitly stating that AWS, Google, Nvidia and AMD hardware all remain central to its compute expansion. Read the disclaimer as the substance: the largest pure-play model developers are all now vertically integrating into silicon, and all of them need to say publicly that they are not leaving their suppliers. Both things are true, and the second one is true for longer.
- **Meta launched a coding agent and priced it as a weapon.** Muse Code runs on Muse Spark 1.2, handles planning, writing and verification, and is available pay-as-you-go at **\$1.25 per million input tokens and \$4.25 per million output tokens** — pricing carried over from the previous model generation and aimed squarely at Anthropic and OpenAI. META closed +0.14%, which is the market saying it does not yet believe the distribution advantage converts.
- **And the concentration number of the week: Microsoft made \$24.1bn from OpenAI in the fiscal year to late June.** Against Nadella's stated ~\$37bn annualised AI revenue as of the March quarter, that is roughly **70% of Microsoft's actual AI sales coming from a single counterparty** that pays it for compute, model-development costs and a share of revenue. Every AI revenue line in this market should be read with that ratio in mind. Circular revenue is still revenue; it is just not diversified revenue.

14 Beyond the markets

- **Two indices made all-time highs and closed near their lows, and almost nobody will report it that way.** The Russell finally took out the 3,046.59 record it missed by 9.6 points on Tuesday — printed 3,048.85, and closed 3,019.19, on the low. The S&P printed 7,793.68 six minutes after the open and closed 7,723.55, 3.4 points off the low. The headline is "Dow hits record", and the Dow did. But two of the three broad indices made new highs on Wednesday and neither of them could hold anything. Records made in the first ten minutes and given back over six and a half hours are a different animal from records made on the close.
- **Gold had its best day of the year on a day nothing frightening happened.** No new war headline, crude down, credit unchanged, VIX down 4%, the S&P off 0.17%. And December gold settled +3.68% while spot went through \$4,200 and silver went up 4.12%. The trade was not fear. The trade was a services prices-paid index at 70.3 with an employment sub-index at 47.4 and a Treasury Secretary who has just been described in print, by a Johns Hopkins professor and a hedge fund manager, as running a deliberate devaluation. Buy the metal, sell the currency. It is the oldest trade there is, and it just had its best session of 2026.
- **Four resignations cost more than most earnings misses.** Alphabet's \$186bn single-day loss is larger than the entire market capitalisation of roughly 470 companies in the S&P 500. It was not caused by a product failure, a regulatory action, a demand shortfall or a competitor. Four

people gave notice. In an industry where the marginal input is a few hundred researchers and the marginal output is measured in trillions, that ratio is worth sitting with — particularly if you own anything in this complex on a discounted-cash-flow basis.

- **SpaceX has now given back everything and the supply has not arrived yet.** IPO'd at \$135 on 12 June. Record \$225.64 on 16 June. Closed Wednesday at 108.27, having touched an all-time low of 104.83 during the session, on 202 million shares — the most active stock in the world for a second consecutive day. It is 52% below its high, 20% below its offer price, and the first tranche of a 911.5 million share unlock lands today against a float below 280 million. Whatever one thinks of the business, the sequencing here was unkind: earnings on Tuesday, a 13.6% repricing on Wednesday, and the supply on Thursday.
- **A signal that has now changed four times in four days.** Hedgeye's WTI TREND went bullish, then bearish on Monday, then bullish on Tuesday's Early Look, then bearish again live on Tuesday's Macro Show, and Wednesday's Early Look published it as bearish with the whole band rebuilt — floor down \$4.19, ceiling down \$7.68. That is what a trailing volatility-adjusted range does when the underlying moves 10% in four sessions. It is also a useful reminder of what a signal is for: it sizes positions, it does not forecast shipping lanes. The house's actual response, all week, has been to hold no position in crude at all.
- **And the most under-covered number of the day was in the EIA report.** Total US crude inventories including the Strategic Petroleum Reserve fell to 711.8 million barrels — **the lowest since March 1984**. Not since 2008, not since the pandemic. Since Ronald Reagan's first term. That is the buffer the United States is running while the Strait of Hormuz has been closed for four weeks, into a hurricane season, with commercial inventories 6% below their five-year average and 80% of a key interceptor stockpile expended. Nobody traded it. It is the sort of number that matters exactly once, and violently.

15

Appendix — stock cards

Names in focus plus the levels that matter — last + day · market cap, band or next key date · one-line read. Equity prices are Wednesday 5 August cash closes; futures, FX, crypto and Asian cash indices are live at 09:53–10:10 GMT+8 Thursday. No charts.

Today's event, and yesterday's casualty

SPACEX (SPCX)

\$108.27 ▼ -13.61%

Cap ~\$1.427T · 202.4m shares · **UNLOCK TODAY**

911.5m shares (~\$116bn) eligible today against a float under 280.1m; 20% may sell on day one. Touched an all-time low of 104.83. Below the \$135 IPO price and 52% off the June high.

ALPHABET (GOOGL)

\$362.43 ▼ -4.03%

Cap \$4.432T · traded 384.47 → 356.82

Jeff Dean, Oriol Vinyals, Quoc Le and Sanjay Ghemawat resigned to found Discovery Loop. ~\$186bn of cap on four resignations. Hedgeye had it BULLISH that morning.

The metals trade, and the signal that was upgraded into it

GOLD (DEC)

\$4,346.50 ▲ +0.96%

LIVE · Settled \$4,305.20, +3.68% · Band \$4,018–\$4,175 NEUTRAL

Best session of the year. Spot +4.11% and back above \$4,200 — above the ceiling of a band Hedgeye had just upgraded from bearish and lifted at both ends. GLD +4.14%.

SILVER (SEP)

\$62.46 ▲ +0.28%

LIVE · Settled \$62.29, +3.39% · Band \$57–\$62 bearish

Fourth straight up session and through a ceiling that was just raised from \$60. Spot +4.12%, SLV +4.14%. Signal still bearish, price says otherwise.

COPPER (SEP)

\$6.73 ◆ -0.01%

LIVE · Settled ~\$6.73, ~+1.3% · Band \$6.36–\$6.70 bullish

Above its ceiling for a second consecutive session, on the only metal Hedgeye rates bullish TREND. Floor raised 4c, ceiling raised 7c.

US DOLLAR (DXY)

99.67 ◆ -0.01%

LIVE · Wed close 99.67, -0.19% · Band 99.01–101.17 BEARISH

DOWNGRADED from neutral. Keith is out of dollars and expressing the view through Brazil and the Philippines. The other side of the gold trade.

The memory complex — three great quarters, three negative reactions

SANDISK (SNDK)

\$1,350.50 ▼ -5.40%

Cap ~\$200.0B · ~\$1,287.67 after hours

FQ4 revenue \$8.965bn, +372%. Gross margin 84.6%. EPS beat by >10%. FQ1 guide midpoint +359% y/y — and 5.5% below consensus. Sold anyway.

WESTERN DIGITAL (WDC)

\$519.17 ▼ -5.36%

Cap ~\$178.9B · ~10–11% after hours

Revenue \$3.747bn (+44%) vs \$3.68bn; adj EPS \$3.56 vs \$3.31; FQ1 guide midpoint \$4.1bn vs \$4.06bn. Beat on all three and fell twice.

AMD

\$482.05 ▼ -7.04%

Cap ~\$786.0B · completes Tuesday's after-hours move

Beat and raised on Tuesday — revenue +50%, data centre +107%, Q3 guided ~\$13bn — and has now lost 7% in the regular session. Multiple, not numbers.

NVIDIA (NVDA)

\$219.22 ▲ +3.43%

Cap \$5.31T · 156.4m shares · Band \$190–216, above the ceiling

The only large-cap semi that worked. Alpha Code 205/207, bullish TRADE and TREND. Closed \$3.22 through its own published ceiling. Has not reported yet.

The Quad 3 winners, and the index that broke

HEALTH CARE (XLV) \$164.16 ▲ +1.27% Hedgeye LONG · Band \$159–\$167 bullish · BEST SECTOR Lilly +4.86%, McKesson +5.64%. The sector the August Quad 3 nowcast prescribes led on the day the data confirmed the nowcast.	ELI LILLY (LLY) \$1,169.86 ▲ +4.86% Cap \$1.043T · 6.4% off its 52-week high The single largest positive contributor to a record Dow close. Ranged 1,138.43–1,216.94.
KOSPI (KOREA) 6,289.76 ▼ -4.68% LIVE 09:53 · Hedgeye SHORT · Samsung –5.90%, SK Hynix –5.58% The worst market in the world this morning, and the fifth consecutive session with a move of more than 1.6%. Keith said on Tuesday he intended to short more.	S&P EQUAL WEIGHT (RSP) \$219.73 ▼ -0.23% Hedgeye LONG · vs SPY -0.20% · ATH 221.09 intraday Lagged by only 3bp after 36bp and 50bp. Printed an all-time high during the session. The broadening thesis is finally visible in the number.

Chart of the Day “A One-Day Squeeze Is Not A Trend” (5 Aug 07:53 EDT). The Macro Show with Keith McCullough and Matt Cooper (5 Aug 07:37 EDT) — video only, no Summary Notes were published to this subscription at capture.

Session narrative, corporate news and single stocks. TradingKey “Today’s Market Recap: ADP Misses, Stagflation Fears Rise; SanDisk & WDC Plunge After-Hours; Gold Back Above \$4200” and “US Stocks Close: Dow Hits New High as Nasdaq Falls 0.83%” for the closing levels, the SanDisk and Western Digital quarterly detail, the Anthropic silicon team, the Meta Muse Code pricing, the Microsoft/OpenAI \$24.1bn disclosure and the Jeff Dean departure detail; TradingKey “Japan, South Korea Stocks Weaken” for the Asian open levels and the Kioxia, SoftBank, SK Hynix and Samsung moves. TheStreet live blog for 5 August for the intraday record, the opening-bell levels, the SpaceX premarket print, the Houthi tanker report and the Trump Hormuz comments. Investor’s Business Daily “Nvidia Lifts Dow, But Google, SpaceX Skid”. FX Leaders and Invezz on the Alphabet decline. Washington Post and Yahoo Finance wraps for 5 August.

Macro and policy. ADP July national employment (+44k vs +70k expected) and ISM July Services (54.1 vs 54.5; business activity 59.1, new orders 57.2, employment 47.4, prices paid 70.3) via investingLive and FXStreet. EIA Weekly Petroleum Status Report for the week ended 31 July via Reuters, Oil & Gas 360 and The Peninsula. ISM July Manufacturing at 55.6, the JOLTS June figures, the June payrolls base, the April–May revisions, the 29 July FOMC 9–3 vote and the dispersed July payrolls consensus are carried forward from the 4 and 5 August editions of this brief and their cited sources.

Geopolitics. Trump’s “very soon” and “as early as Wednesday” comments and the Iran–Oman entry/exit route proposal via NBC News, ms.now and the Associated Press carry; Rubio’s “progress but not finality” via CBS News; the Houthi claim on the Saudi tanker off Yanbu (eighth since the 22 July blockade) via Reuters and NewsNation; the Iranian state-media “no connection” statement, the Indian-flagged vessel sinking and the ~80% interceptor-stockpile figure via CNN’s live coverage as carried by TheStreet. The 7–13 July sequence, the June memorandum, the 28 February start date and the Commonwealth Bank transit estimate are as sourced in the 31 July to 5 August editions.

SpaceX lock-up. Share count, dollar value, float, tranche schedule and the Musk lock expiry via Forbes, The Motley Fool, Investing.com and Yahoo Finance coverage of the 6 August expiration; figures differ across sources between ~\$116bn and ~\$123bn depending on the reference price used.

Data-confidence

CROSS-CHECKS PASSED. Every live futures row reconciles exactly off Wednesday’s settle, and Wednesday’s settles reconcile back to the Tuesday settles published in the 5 August edition: ES 7,765.50 → 7,749.50 → 7,757.25; NQ 29,863.50 → 29,615.00 → 29,499.75; YM 54,268 → 54,494 → 54,584; RTY 3,044.70 → 3,025.40 → 3,025.50; WTI 75.77 → 75.22 → 75.64; Brent 79.36 → 79.45 → 79.91; gold 4,152.60 → 4,305.20 → 4,346.50; silver 60.245 → 62.29 → 62.46; nat gas 2.682 → 2.688 → 2.671; RBOB 2.8522 → 2.8388 → 2.8322. Cash index arithmetic ties in all four cases against yesterday’s published closes: 7,736.52–12.97 = 7,723.55; 26,584.99–221.55 = 26,363.44; 54,085.88+263.24 = 54,349.12; 3,036.98–17.79 = 3,019.19. The futures percentage moves independently corroborate the cash moves in all four indices (ES –0.21% vs SPX –0.17%; NQ –0.83% vs COMPQ –0.83%; YM +0.42% vs INDU +0.49%; RTY –0.63% vs RUT –0.59%). Three independent sources — TradingKey, Investor’s Business Daily and Yahoo Finance — agree on the Dow record close, the Nasdaq –0.83% and the S&P 7,723.55.

KNOWN CONFLICTS AND WEAK MARKS. (1) *The S&P’s closing level. * Yahoo Finance and TradingKey both print 7,723.55 (–12.97, –0.17%); Financial Modeling Prep prints 7,722.12 (–14.40, –0.19%). Both are internally self-consistent off the same 7,736.52 prior close and both agree on the 7,793.68 high and 7,720.17 low. This brief uses 7,723.55 as the two-source majority. Nothing here depends on the 1.43-point difference. (2) *The VIX intraday high. * Yahoo prints 18.43, FMP prints 17.50. Both agree on the 15.81 close, the 15.48 low and the –4.18% move. A 2.62-point intraday spike on a day the S&P fell 0.17% is not corroborated by anything else on the tape and the high is quoted here only with the conflict attached. (3) *WTI’s Wednesday settle. * This brief uses \$75.22, which is the exchange previous-close mark that reconciles to the live \$75.64. TradingKey reports \$75.13 (–0.8%). The difference is a settlement-window convention; direction and magnitude agree. (4) *Copper. * Yahoo quotes the September contract to two decimals, so both the live price and the previous close round to \$6.73 and the day change rounds to –0.01%. The ~+1.3% Wednesday move is derived against Tuesday’s \$6.6435 settle and is therefore accurate to roughly ±0.1pp. (5) *Gold, silver and copper bands. * Hedgeye publishes these Risk Ranges on spot; this brief compares them against front-month futures settles, which carry a contango basis of roughly 0.5–1.0%. For silver and copper the “above the ceiling” conclusion survives the basis. For gold, spot itself is reported above \$4,200 by TradingKey against a \$4,175 ceiling, so the conclusion holds on spot as well as on futures. (6) *Sector percentages* are SPDR sector ETF closes, not GICS S&P sector index prints — close proxies, cross-validated against SPY –0.20% against the S&P’s –0.17%, but not the official sector indices. (7) *Asian single-stock moves. * Samsung –5.90%, SK Hynix –5.58%, Kioxia –10.28%, SoftBank –6.28% and Ildiden –7.94% are intraday marks from two different capture times roughly ninety minutes apart; TradingKey’s opening-print figures for Samsung (–1.63%) and the Kospi (–1.81%) are materially different because the market deteriorated through the morning. Both are shown where relevant. (8) *Alphabet’s \$186bn cap loss* is derived by applying the –4.03% move to the \$4.432T closing capitalisation; it is an approximation to the nearest few billion.

KNOWN GAPS. No ETF Pro Plus, Signal Strength Stocks or Real-Time Alerts publication was visible on this subscription’s feed this morning — the products surfaced were Bitcoin Trend Tracker, The Macro Show, Early Look and Momentum Stock Tracker. **This brief therefore carries no Hedgeye position changes for Wednesday, and none should be inferred;** the 25-long / 14-short book count and the LQD, IVEs, AIQ, EZA and CERY changes are carried forward from Tuesday and may be stale. The Macro Show published as video only with no Summary Notes at capture, so nothing said on air Wednesday is quoted here. The MOMO Tracker and Crypto Quant bodies are image-based and only their headline figures were extracted. Hedgeye published no Risk Ranges for Utilities, Financials, Energy, Communication Services, USD/JPY, Brent, Bitcoin or any Asian index. Thursday earnings times for Datadog, Lyft, Roku, Airbnb and DraftKings are carried from yesterday’s edition’s secondary calendars and are not confirmed against company releases; only Warner Bros Discovery, Keurig Dr Pepper, Kenvue, Fiserv and Viatris are confirmed on the exchange calendar. The Bank of Japan July minutes and New Zealand Q2 unemployment, both listed in yesterday’s edition, published Wednesday morning GMT+8 and their contents were never retrieved. South Korea’s July CPI remains unobtained. The Sensex level carried in section 12 is Wednesday’s close, not a live print — India opens 12:15 GMT+8.

TIMING & UNVERIFIED. This brief was generated at approximately 10:20 GMT+8 Thursday 6 August off a data snapshot taken 09:53–10:10. Tokyo, Seoul, Hong Kong, Shanghai, Taipei, Sydney, Singapore and Wellington were all trading at capture and their levels will have moved materially — the Kospi alone moved from –1.81% to –4.68% inside ninety minutes this morning. US cash equity, ETF and cash-yield levels are Wednesday closes and are roughly eighteen hours old. The central geopolitical claim remains unresolved and is now one deadline older: the President said a Hormuz deal could come “as early as Wednesday” and Wednesday has passed; Iranian state media stated on the same day that the Iran–Oman track has “no connection” to reopening the Strait; the Houthis hit an eighth Saudi tanker; an Indian-flagged vessel was sunk. No ceasefire, timetable or signed instrument exists. The June memorandum broke inside five weeks. The 63% September rate-hike probability is a market-implied figure as of 31 July and is stale. Hedgeye’s Risk Ranges quoted here are Wednesday’s set and will be superseded when the Thursday Early Look publishes around 19:25–19:55 GMT+8 tonight. **Verify live before acting.** This is the FULL Hedgeye edition — the logged-in browser was reachable and every Hedgeye product visible on this subscription’s feed was retrieved.
